**Robert J. Ouellette**

Fundamentals of Protein Structure and Function Engelbert Buxbaum, 2015-11-27 This book serves as an introduction to protein structure and function. Starting with their makeup from simple building blocks, called amino acids, the 3-dimensional structure of proteins is explained. This leads to a discussion how misfolding of proteins causes diseases like cancer, various encephalopathies, or diabetes. Enzymology and modern concepts of enzyme kinetics are then introduced, taking into account the physiological, pharmacological and medical significance of this often neglected topic. This is followed by thorough coverage of haemoglobin and myoglobin, immunoproteins, motor proteins and movement, cell-cell interactions, molecular chaperones and chaperonins, transport of proteins to various cell compartments and solute transport across biological membranes. Proteins in the laboratory are also covered, including a detailed description of the purification and determination of proteins, as well as their characterisation for size and shape, structure and molecular interactions. The book emphasises the link between protein structure, physiological function and medical significance. This book can be used for graduate and advanced undergraduate classes covering protein structure and function and as an introductory text for researchers in protein biochemistry, molecular and cell biology, chemistry, biophysics, biomedicine and related courses. About the author: Dr. Buxbaum is a biochemist with interest in enzymology and protein science. He has been working on the biochemistry of membrane transport proteins for nearly thirty years and has taught courses in biochemistry and biomedicine at several universities.

*Advances in Harvest and Post-Harvest Technology of Fishes* D.D. Nambudiri, 2012-01-15 In recent years there have been notable advances in the fisheries. Progresses made in refinements of vessels, new line materials and line-handling systems, preserving the catch, the availability of oceanographic-sensor equipments and the utilization of satellite technology to locate potential fishing grounds have greatly improved the fishing power of longline vessels. Post harvest technology of fish has evolved in the last one decade to a more energy-efficient, cost-effective, and quality upgrading technology. Since fresh fish can get spoiled very quickly, the development of technology for post-harvest preservation and methodology to convert fish to value added products have also become popular in recent times. Value addition helps in getting high price for the fishery products. There is a need to develop competent human resources in the field of post harvest management of fish and production of value added products from them. It is required to inculcate vocational and entrepreneurial skills in order to

widen employment opportunities, particularly among rural youth and the disadvantaged sections of the society as well as to enable self employment.

**Tissue Engineering** Narine Sarvazyan, 2020-04-02 Tissue engineering and regenerative medicine is a new, interdisciplinary branch of science that combines knowledge from numerous scientific fields including biology, biochemistry, physics, chemistry, applied engineering, and medicine. It aims to restore damaged parts of the human body by rebuilding them in vitro using individual building blocks of biological tissues such as cells and the extracellular matrix that surrounds them. The authors hope to spark students' interest in this exciting new field of science as well as give them a basic knowledge of its terminology. This book is based on a hands-on practical course in tissue engineering conducted by the Fulbright US Scholar recipient, Dr. Narine Sarvazyan (George Washington University, Washington USA). It provides an overview of the core topics of the tissue engineering field, including stem cell differentiation, the role of extracellular matrix and attachment proteins, scaffolds, and culturing of engineered tissues. Each chapter is accompanied by hands-on demonstrations and self-check questions. The text is easily readable for students of all backgrounds and the described protocols can be conducted using common lab equipment. This textbook is also useful for developing undergraduate and graduate courses that teach basic methods and approaches in this promising and rapidly developing field.

*Biofabrication and 3D Tissue Modeling* Dong-Woo Cho, 2019-01-02 3D tissue modelling is an emerging field used for the investigation of disease mechanisms and drug development. The two key drivers of this upsurge in research lie in its potential to offer a way to reduce animal testing with respect to biotoxicity analysis, preferably on physiology recapitulated human tissues and, additionally, provides an alternative approach to regenerative medicine. Integrating physics, chemistry, materials science, and stem cell and biomedical engineering, this book provides a complete foundation to this exciting, and interdisciplinary field. Beginning with the basic principles of 3D tissue modelling, the reader will find expert reviews on key fabrication technologies and processes, including microfluidics, microfabrication technology such as 3D bioprinting, and programming approaches to emulating human tissue complexity. The next stage introduces the reader to a range of materials used for 3D tissue modelling, from synthetic to natural materials, as well as the emerging field of tissue derived decellularized extracellular matrix (dECM). A whole host of critical applications are covered, with several chapters dedicated

to hard and soft tissues, as well as focused reviews on the respiratory and central nervous system. Finally, the development of in vitro tissue models to screen drugs and study progression and etiologies of diseases, with particular attention paid to cancer, can be found.
