A Descriptive Catalogue of the Music of Charles Ives James B. Sinclair, 1999-01-01 This catalogue of the music of Charles Ives contains 728 entries covering all of the prolific composer's works. James Sinclair's book presents information produced by recent Ives scholarship and generous commentary on each of Ives's compositions. It completes the work begun by musicologist John Kirkpatrick in 1955, when Ives's music manuscripts were deposited in the Yale Music Library. Ives's works are arranged alphabetically by title within genres. Whenever possible, each entry includes the main title and any other titles the composer may have used; the forces required; the duration; headings of movements; publication history; citation of the

first known performance and first recording; the derivation of the work, listing music on which it may be modeled or from which it may borrow material; the principal literature treating the piece; and commentary on these and other matters. The catalogue also provides musical incipits for all Ives's extant works, seven appendixes (covering his work lists, 'Quality Photo' lists, his songbooks, a chronology of his life, recordings made by Ives, and his private publications and commercial publishers), three concordances, and four extensive indexes (addresses, names, titles, and musical borrowings).

The Characteristic Symphony in the Age of Haydn and Beethoven Richard Will, 2002-08-15 Associated through descriptive texts with literature, politics, religion, and other subjects, 'characteristic' symphonies offer an opportunity to study instrumental music as it engages important social and political debates of the eighteenth and early nineteenth centuries. This first full-length study of the genre illuminates the relationship between symphonies and their aesthetic and social contexts by focussing on the musical representation of feeling, human physical movement, and the passage of time. The works discussed include Beethoven's Pastoral and Eroica Symphonies, Haydn's Seven Last Words of our Savior on the Cross, Carl Ditters von Dittersdorf's symphonies on Ovid's Metamorphoses, and orchestral battle reenactments of the Revolutionary and Napoleonic eras. A separate chapter details the aesthetic context within which characteristic symphonies were conceived, as well as their subsequent reception, and a series of appendixes summarises bibliographic information for over 225 relevant examples.

Great Debates in EU Law Jeremias Adams-Prassl, Sanja Bogojevic, 2022-05-30 This book introduces students to the great debates in EU law. Rather than simply presenting traditional approaches that provide descriptions (often in historical order) of substantive and constitutional elements of Union law, this book clusters material around these debates in an engaging and lively way. By offering concise analyses of core dilemmas and tensions in EU law, the book provides a different kind of introduction, one that helps students place the discussions within a broader context and narrative. The authors have found in their teaching that students often struggle with individual aspects and materials without understanding broader narratives, which are traditionally developed in monographs or journal articles that are beyond the reach of undergraduate readers.

A History of the Music for Wind Band Leon J. Bly, 2023-10-01 The book provides a historical survey of the wind band's music and denotes how historical and cultural developments have influenced it over the course of time. Although the modern wind band developed first in the 19th century, it has its roots in the wind music of ancient times, and music survives that has been composed since the Middle Ages. Therefore, this book covers the music from that time to the present, including the dance music of the Renaissance, the Harmoniemusik of the Classical Period, and the nationalistic music of the Romantic Period, as well as the major wind band repertoire developed after 1900.

Neuropedia | The Deblocking Method Paulo Sergio Santos Negrete, aka, "Teacher John Chapman", 2021-03-09 Welcome to Neuropedia | The Deblocking Method This method accelerates learning 3 to 5 times more than any conventional method. It has several positive by-products, such as psychotherapeutic and psycho-hygienic effects in the Suggestopedic environment created in the classroom. During my years of teaching English as a Foreign Language, I could never accept the

fact that my students needed so many years to start speaking a new language with confidence. Some others, even with years of study and dedication, could not develop, despite my efforts to create better classes and activities. Others had to constantly review the verb to be. The results? The students were afraid of speaking and learning. Many people may ask: But how can it be possible to learn effectively in a short time? What's the secret? Others say: That's impossible! It is just propaganda! But actually, we are beings with an incredible power to learn, but the Social Suggestive Norms so present in our pedagogical system for centuries dictate how much we can learn and how long we need to. But I ask you: How did we learn our mother language? How could our brain collect, organize, understand, and reproduce words and sentences when we were children? No one went to school to learn to speak. Our parents or who may have raised us never taught us grammar in order to make us speak. We can realize that we are missing something in our system of foreign language teaching. It does not use the resources available in our brain/mind. Our way of teaching in the present is not structured to follow the way the brain receives stores and processes information. So, why not change the whole system? The answer is quite simple. Who wants to train teachers? Change textbooks and methods? How long would it take? But the fact is that more scientists are discovering the mysteries of mind and memory. We are taking advantage of these discoveries made centuries and decades ago. Researchers have noticed that the current pedagogic system is not the best approach to learn. That's why so many so-called accelerated learning systems or brain-friendly approaches have appeared. The main problem is that most of them have never been really tested. They have not had a follow-up for decades to check if they would be beneficial to the students. Neuropedia is a method with a scientific background.

Playing Before the Lord Calvin Stapert, 2014-01-30 Franz Joseph Haydn (1732-1809) has been called the father of the symphony and the string quartet. A friend of Mozart and a teacher of Beethoven, Papa Haydn composed an amazing variety of music -- symphonies, string quartets, concerti, masses, operas, oratorios, keyboard works -- and his prolific output celebrates both the heights and depths of life. In this fascinating book Calvin Stapert combines his skills as a biographer and a musicologist to recount Haydn's steady rise from humble origins to true musical greatness. Unlike other biographers, Stapert argues that Haydn's work was a product of his devout Catholic faith, even though he worked mainly as a court musician and the bulk of his output was in popular genres. In addition to telling Haydn's life story, Stapert includes accessible listening guides to *The Creation* and portions of other well-known works to help Haydn listeners more fully appreciate the brilliance behind his music.

Oxford History of Western Music Richard Taruskin, 2009-07-27 The Oxford History of Western Music is a magisterial survey of the traditions of Western music by one of the most prominent and provocative musicologists of our time. This text

illuminates, through a representative sampling of masterworks, those themes, styles, and currents that give shape and direction to each musical age. Taking a critical perspective, this text sets the details of music, the chronological sweep of figures, works, and musical ideas, within the larger context of world affairs and cultural history. Written by an authoritative, opinionated, and controversial figure in musicology, The Oxford History of Western Music provides a critical aesthetic position with respect to individual works, a context in which each composition may be evaluated and remembered. Taruskin combines an emphasis on structure and form with a discussion of relevant theoretical concepts in each age, to illustrate how the music itself works, and how contemporaries heard and understood it. It also describes how the c

Clark, Alexander Rehding, 2001 Music theory of almost all ages has relied on nature in its attempts to explain music. The understanding of what 'nature' is, however, is subject to cultural and historical differences. In exploring ways in which music theory has represented and employed natural order since the scientific revolution, this volume asks some fundamental questions not only about nature in music theory, but also the nature of music theory. In an array of different approaches, ranging from physical acoustics to theology and Lacanian psychoanalysis, these essays examine how the multifarious conceptions of nature, located variously between scientific reason and divine power, are brought to bear on music theory. They probe the changing representations and functions of nature in the service of music theory and highlight the ever-changing configurations of nature and music, as mediated by the music-theoretical discourse.
