Modern Soviet Architecture and Design Владимир Муленок, 2025-03-11 This study guide provides a concise overview of the artistic styles and architectural trends during the early years of Soviet rule, as well as the architectural development in the RSFSR (Russian Soviet Federative Socialist Republic) and the USSR (Union of Soviet Socialist Republics) throughout much of the 20th century, from 1917 to 1991. This period encompasses Visionary Architecture, Constructivism, the decline of the Russian Avant-Garde, the emergence of the Stalinist Empire style, and the rise of New Modernism. The guide covers both volumetric design and urban planning concepts, proposals, and trends. The theoretical content is fully illustrated with drawings by 4th-year students. The cover features portraits of notable architects from the Soviet era. This manual is intended for full-time students of the Faculty of Architecture, in particular, in the following areas: 07.03.01 "Architecture", 07.03.02 "Restoration and Reconstruction of Architectural Heritage" and 07.03.03 "Design of the Architectural Environment". It will also be of interest to anyone interested in the history of architecture of the Soviet Union. This manual is a translated and corrected text of the manual "Modern Domestic Architecture and Design" published in 2011. The author thanks A.A. Abrosimova, Ju.V. Lapina, V.U. Tereshonok, V.A. Chuprynin and S.V. Mulenok, as well as the Department of Foreign Languages of TSUAB, for the translation and preparation of the manual.

Use of Timber in Tall Multi-Storey Buildings Ian Smith, Andrea Frangi, 2014-01-01 Since the dawn of civilization, timber has been a primary material for achieving great structural engineering feats. Yet during the late 19th century and most of the 20th century it lost currency as a preferred material for construction of large and tall multi-storey building superstructures. This Structural Engineering Document (SED) addresses a reawakening of interest in timber and timber-based products as primary construction materials for relatively tall, multi-storey buildings. Emphasis throughout is on holistically addressing various aspects of performance of complete systems, reflecting that major gaps in knowhow relate to design concepts rather than technical information about timber as a material. Special consideration is given to structural form, fire vulnerability, and durability aspects for attaining desired building performance over lifespans that can be centuries long.

*A Century of Change* Yi Wang,2016-07-20 This book provides a comprehensive overview of the evolution of Beijing's urban structure in the 20th century, analyzing essential social and economic changes in the housing sector. Focusing on the urban changes that took place under the market economy after 1978 and beyond, the book addresses the demolition of courtyard houses in Beijing's old city, the relocation of low-income families from the old city, the government's role regarding housing in the city, and residential segregation in Beijing. Expanding on the author's PhD thesis at the University of Cambridge, it is illustrated with a wealth of historic photos and maps of Beijing. Presenting relevant descriptions, extensive literature and case studies, the book offers a valuable resource for students and scholars of architecture, urban studies and Chinese studies. First published in 2013 by Pace in Hong Kong, it has since been added to the libraries of many distinguished universities, including Harvard, MIT, Princeton, Columbia, Yale, Stanford, Cornell, U Penn, NYU, UC Berkeley, Hong Kong University, UBC in Canada and the University of Witwatersrand in South Africa.

**Building Services and Energy Efficient Buildings** Dirk Bohné,2023-07-12 The completely revised basic work presents itself at the state of the art. The numerous explanations on sustainable building systems are brought together in the new chapter Energy Concepts. The technical content is condensed according to the facts and contexts relevant to architects and civil engineers. The extensive illustration section with detailed drawings for pictorial commentary on the text has been revised and updated. The Book thus remains an indispensable basic work for keeping pace with the dynamic technological development, the increasing demands for comfort and the requirements for an economical and environmentally friendly use of energy in technical building.

*Building Cost Planning for the Design Team* Jim Smith,David Jaggar,2007-03-14 The central thesis of this book defines cost planning as a team responsibility and it attempts to broaden the limited vision of conventional cost planning by considering such issues as value, use and effectiveness of the completed building.

**Structures and Architecture** Paulo J. da Sousa Cruz,2016-10-14 Although the disciplines of architecture and structural engineering have both experienced their own historical development, their interaction has resulted in many fascinating and delightful structures. To take this interaction to a higher level, there is a need to stimulate the inventive and creative design of architectural structures and to persuade architects and structural engineers to further collaborate in this process, exploiting together new concepts, applications and challenges. This set of book of abstracts and full paper searchable CD-ROM presents selected papers presented at the 3rd International Conference on Structures and Architecture Conference (ICSA2016), organized by the School of Architecture of the University of Minho, Guimarães, Portugal (July 2016), to promote

the synergy in the collaboration between the disciplines of architecture and structural engineering. The set addresses all major aspects of structures and architecture, including building envelopes, comprehension of complex forms, computer and experimental methods, concrete and masonry structures, educating architects and structural engineers, emerging technologies, glass structures, innovative architectural and structural design, lightweight and membrane structures, special structures, steel and composite structures, the borderline between architecture and structural engineering, the history of the relationship between architects and structural engineers, the tectonics of architectural solutions, the use of new materials, timber structures and more. The contributions on creative and scientific aspects of the conception and construction of structures, on advanced technologies and on complex architectural and structural applications represent a fine blend of scientific, technical and practical novelties in both fields. This set is intended for both researchers and practitioners, including architects, structural and construction engineers, builders and building consultants, constructors, material suppliers and product manufacturers, and other experts and professionals involved in the design and realization of architectural, structural and infrastructural projects.

**Steel Designers' Manual** SCI (Steel Construction Institute), 2016-06-27 In 2010 the then current European national standards for building and construction were replaced by the EN Eurocodes, a set of pan-European model building codes developed by the European Committee for Standardization. The Eurocodes are a series of 10 European Standards (EN 1990 – EN 1999) that provide a common approach for the design of buildings, other civil engineering works and construction products. The design standards embodied in these Eurocodes will be used for all European public works and are set to become the de-facto standard for the private sector in Europe, with probable adoption in many other countries. This classic manual on structural steelwork design was first published in 1955, since when it has sold many tens of thousands of copies worldwide. For the seventh edition of the Steel Designers' Manual all chapters have been comprehensively reviewed, revised to ensure they reflect current approaches and best practice, and brought in to compliance with EN 1993: Design of Steel Structures (the so-called Eurocode 3).

Proceedings of 3rd International Sustainable Buildings Symposium (ISBS 2017) Seyhan Fırat, John Kinuthia, Abid Abu-Tair, 2018-03-30 This book describes the latest advances, innovations, and applications in the field of building design, environmental engineering and sustainability as presented by leading international researchers, engineers, architects and urban planners at the 3rd International Sustainable Buildings Symposium (ISBS), held in Dubai, UAE from 15 to 17 March 2017. It covers highly diverse topics, including smart cities, sustainable building and construction design, sustainable urban

planning, infrastructure development, structural resilience under natural hazards, water and waste management, energy efficiency, climate change impacts, life cycle assessment, environmental policies, and strengthening and rehabilitation of structures. The contributions amply demonstrate that sustainable building design is key to protecting and preserving natural resources, economic growth, cultural heritage and public health. The contributions were selected by means of a rigorous peer-review process and highlight many exciting ideas that will spur novel research directions and foster multidisciplinary collaboration among different specialists.

*Intelligent Infrastructure and Smart Materials* Shray Pathak, Anoop Kumar Shukla, Shreya Sharma, Vijay P. Singh, 2025-08-16 This book delves into the intersection of advanced technologies, sustainable development, and the crucial role of infrastructure in shaping a more environmentally friendly world. In the contemporary era, as societies grapple with the challenges of climate change, resource depletion, and urbanization, the concept of intelligent infrastructure becomes paramount. The book explores how integrating cutting-edge technologies such as artificial intelligence, Internet of Things (IoT), and smart materials into our built environment can contribute to the creation of more efficient, resilient, and sustainable infrastructure systems. The significance of this book lies in its comprehensive exploration of the potential of intelligent infrastructure and smart materials to address pressing environmental issues. It sheds light on how these technologies can optimize energy consumption, reduce waste, and enhance the overall efficiency of infrastructure networks. Moreover, the book emphasizes the importance of sustainability in the context of infrastructure development, urging a shift towards eco-friendly practices. By showcasing real-world examples and case studies, the book provides practical insights into the implementation of intelligent infrastructure solutions, making it a valuable resource for researchers, engineers, policymakers, and anyone interested in the intersection of technology and sustainability.

*Proceedings of Italian Concrete Days 2016* Marco di Prisco, Marco Menegotto, 2018-04-16 This book gathers the best peer-reviewed papers presented at the Italian Concrete Days national conference, held in Rome, Italy, on October 27-28, 2016. The conference topics encompass the aspects of design, execution, rehabilitation and control of concrete structures, with particular reference to theory and modeling, applications and realizations, materials and investigations, technology and construction techniques. The contributions amply demonstrate that today's structural concrete applications concern not only new constructions, but more and more rehabilitation, conservation, strengthening and seismic upgrading of existing premises, and that requirements cover new aspects within the frame of sustainability, including environmental friendliness,

durability, adaptability and reuse of works and / or materials. As such the book represents an invaluable, up-to-the-minute tool, providing an essential overview of structural concrete, as well as all new materials with cementitious matrices.

**From Conflict to Inclusion in Housing** Graham Cairns,Georgios Artopoulos,Kirsten Day,2017-11-13 Socio-political views on housing have been brought to the fore in recent years by global economic crises, a notable rise of international migration and intensified trans-regional movement phenomena. Adopting this viewpoint, From Conflict to Inclusion in Housing maps the current terrain of political thinking, ethical conversations and community activism that complements the current discourse on new opportunities to access housing. Its carefully selected case studies cover many geographical contexts, including the UK, the US, Brazil, Australia, Asia and Europe. Importantly, the volume presents the views of stakeholders that are typically left unaccounted for in the process of housing development, and presents them with an interdisciplinary audience of sociologists, planners and architects in mind. Each chapter offers new interpretations of real-world problems, local community initiatives and successful housing projects, and together construct a critique on recent governmental and planning policies globally. Through these studies, the reader will encounter a narrative that encompasses issues of equality for housing, the biopolitics of dwelling and its associated activism, planning initiatives for social sustainability, and the cohabitation of the urban terrain.

**Housing, Urban Renewal and Socio-Spatial Integration** Xiaoxi Hui,2013-02-07 This issue of A+BE addresses two critical urban issues China faces today: housing and urban renewal. In the recent two decades, the Chinese urban housing stock underwent a significant, if not extreme, transformation. From 1949 to 1998, the urban housing stock in China largely depended on the public sector, and a large amount of public housing areas were developed under the socialistic public housing system in Beijing and other Chinese cities. Yet in 1998, a radical housing reform stopped this housing system. Thus, most of the public housing stock was privatized and the urban housing provision was conferred to the market. The radical housing privatization and marketization did not really resolve but intensified the housing problem. Along with the high-speed urbanization, the alienated, capitalized and speculative housing stock caused a series of social and spatial problems. The Chinese government therefore attempted to reestablish the social housing system in 2007. However, the unbalanced structure of the Chinese urban housing stock has not been considerably optimized and the housing problem is still one of the most critical challenges in China.
