Ethics and Animals Harlan B. Miller, William H. Williams, 2012-12-06 This volume is a collection of essays concerned with the morality of human treatment of nonhuman animals. The contributors take very different approaches to their topics and come to widely divergent conclusions. The goal of the volume as a whole is to shed a brighter light upon an aspect of human life—our relations with the other animals—that has recently seen a great increase in interest and in the generation of heat. The discussions and debates contained herein are addressed by the contributors to each other, to the general public, and to the academic world, especially the biological, philosophical, and political parts of that world. The essays are organized into eight sections by topics, each section beginning with a brief introduction linking the papers and the sections to one another. There is also a general introduction and an Epilog that suggests alternate possible ways of organizing the material. The first two sections are concerned with the place of animals in the human world: Section I with the ways humans view animals in literature, philosophy, and other parts of human culture, and Section II with the place of animals in human legal and moral community. The next three sections concern comparisons between human and nonhuman animals: Section III on the rights and wrongs of killing, Section IV on the humanity of animals and the animality of humans, and Section V on questions of the conflict of human and animal interests.

Animal Nature and Human Nature W.H. Thorpe, 2018-02-19 Our views on human nature are fundamental to the whole development, indeed the whole future, of human society. Originally published in 1974, Professor Thorpe believed that this was one of the most important and significant topics to which a biologist can address himself, and in this book he attempts a synthetic view of the nature of man and animal based on the five disciplines of physiology, ethology, genetics, psychology and philosophy. In a masterly survey of the natural order he shows the animal world as part of, yet distinct from, the inanimate world. He then treats aspects of the animal world which approach the human world in behaviour and capabilities, examining simple organisms, communications in vertebrates and invertebrates, innate behaviour versus acquired behaviour, and animal perception. In the second part of the book he deals with those aspects of human nature for which there is no analogy and which constitute man's uniqueness – his consciousness of his past, his awareness of his future and his desire to understand the meaning of his existence. The primary facts which demonstrate the importance of this book arise from the ever-growing power of man over his environment and his apparent inability to foresee and cope with the dangers of uncontrolled

population growth on the one hand and the wildly irrational waste and degradation of the natural resources of the world on the other. Professor Thorpe believes that an immense responsibility lies with literate men of good will, particularly scientists, to convince man that he is the spearhead and custodian of a stupendous evolutionary process. *Animal Nature and Human Nature* integrates scientific fact with sound theological thought in an attempt to fulfil, in a manner previously impossible Pascal's injunction that: 'It is dangerous to show man too clearly how much he resembles the beast without at the same time showing him his greatness. It is also dangerous to allow him too clear a vision of his greatness without his baseness. It is even more dangerous to leave him in ignorance of both. But it is very profitable to show him both.'

Animal Lives and Why They Matter Arne Johan Vetlesen, 2022-10-25 This book engages with the changing ways in which we, as a society and culture, look upon and interact with animals, stressing how much animals differ among themselves. An invitation to appreciate the peculiar role of animals in telling important if uncomfortable truths about who we are and where we are heading - namely, towards a world so much poorer in cultural, moral, and biological diversity - as a result of the ongoing decimation of so many other species. Drawing on a variety of thought ranging from that of Midgley, Plumwood, and Murdoch to Levinas, Derrida, and Habermas, from ecophilosophers to conservation biologists, *Animal Lives and Why They Matter* asks how we have come to this, and what an alternative, less destructive approach to our now precarious coexistence with animals might look like. Spanning the disciplines of philosophy, psychology, and anthropology, this enquiry into various cross-species relationships and encounters will appeal to scholars and students across the humanities and social sciences with interests in philosophy, ethics, human-animal interaction, and environmental thought.

Animal Rhetoric and Natural Science in Eighteenth-Century Liberal Political Writing Andrew Billing, 2023-12-07

Our tendency to read French Enlightenment political writing from a narrow disciplinary perspective has obscured the hybrid character of political philosophy, rhetoric, and natural science in the period. As Michèle Duchet and others have shown, French Enlightenment thinkers developed a philosophical anthropology to support new political norms and models. This book explores how five important eighteenth-century French political authors—Rousseau, Diderot, La Mettrie, Quesnay, and Rétif de La Bretonne—also constructed a political zoology in their philosophical and literary writings informed by animal references drawn from Enlightenment natural history, science, and physiology. Drawing on theoretical work by Derrida, Latour, de Fontenay, and others, it shows how these five authors signed on to the old rhetorical tradition of animal comparisons in political philosophy, which they renewed via the findings and speculations of contemporary science. Engaging with recent scholarship on Enlightenment political thought, it also explores the links between their political zoologies and their family resemblance as liberal political thinkers.

Xuedou's 100 Odes to Old Cases Xuedou, 2024 Xuedou's 100 Odes to Old Cases is recognized as the seminal discourse in Chan Buddhism, one that has exerted significant influence on the way stories of former teachers (guze) have been appreciated and appropriated for the past thousand years. In this volume, Steven Heine offers a much-needed translation of this pivotal work along with extensive background and commentary. Heine brings important perspective to a 1000-year old text that became the basis for the Blue Cliff Record, which continues to have a profound impact on the overall legacy of East Asian Buddhist intellectual history and religious literature. Xuedou's verses reflect the author's unique capacity for taming through elegance the undisciplined and deluded minds of followers struggling with self-imposed obstacles to discern reality and thereby discover inner peace. Xuedou cites multiple Chan sources, uses irregular meter to disrupt the reader's

expectations, and evokes unusual allusions to Chinese lore while often interjecting personal comments or lyrical imagery that goes beyond a reliance on doctrine. Xuedou's work is timeless, informative, and extremely influential. Heine offers us a glimpse into his mind and work, as we are taken back in time to the birth of the most essential aesthetic qualities of Chan and Zen Buddhist discourse.
