The New Uranium Mining Boom Broder Merkel, Mandy Schipek, 2011-10-05 The book presents the results from the Uranium Mining and Hydrogeology Conference (UMH VI) held in September 2011, in Freiberg, Germany. The following subjects are emphasised: Uranium Mining, Phosphate Mining and Uranium recovery. Cleaning up technologies for water and soil. Analysis and sensor for Uranium and Radon and Modelling.

Uranium in the Environment Broder J. Merkel, Andrea Hasche-Berger, 2006-01-16 Uranium is an element to be found ubiquitous in rock, soil, and water. Uranium concentrations in natural ground water can be more than several hundreds $\mu\text{g/l}$ without impact from mining, nuclear industry, and fertilizers. Considering the WHO recommendation for drinking water of 15 $\mu\text{g/l}$ (has been as low as 2 $\mu\text{g/l}$ before) due to the chemical toxicity of uranium the element uranium has become an important issue in environmental research. Besides natural enrichment of uranium in aquifers uranium mining and milling activities, further uranium processing to nuclear fuel, emissions from burning coal and oil, and the application of uranium containing phosphate fertilizers may enrich the natural uranium concentrations in soil and water by far. In October 1995 the first international conference on Uranium Mining and Hydrogeology (UMH I) was held in Freiberg being organized by the Department of Geology at the Technical University Bergakademie Freiberg by the support of the Saxon State Ministry of Geology and Environment. Due to the large scientific interest in the topic of uranium a second conference (UMH II) took place in Freiberg in September 1998. Furthermore, in September 2002 scientists working on the topic of uranium mining and hydrogeology attended the third conference (UMH III) which was jointly held together with the International Mine Water - siation (IMWA) Symposium 2002. The reviewed papers and posters of the 2002 conference have been published by Springer entitled *Uranium in the aquatic environment* (edited by Merkel, Planer-Friedrich and Wolkersdorfer).

Uranium in the Aquatic Environment Broder Merkel, Britta Planer-Friedrich, Christian Wolkersdorfer, 2012-12-06 Preface Uranium is a radioactive element and a heavy metal which is naturally occurring in ground and surface water. Although uranium is enriched in granites and gneiss ground water from these host rocks often shows low to intermediate uranium concentrations, while some ground waters from sandstone and carbonate aquifers show elevated uranium concentrations up to several hundred mg/l without man made impact. On the other side, surface water contains increased anthropogenic uranium concentrations due to the intensive use of phosphate fertilizers and in mining areas due to mining

and milling activities. Saxony and Thuringia both being states of the reunified Germany are probably an area where uranium mining activities have impacted the environment more severely than in any other part of the world. Thus, the federal government of Germany allocated huge amounts of money for the rehabilitation work, a unique proceeding without precedent in mining history. In October 1995 the first international conference on Uranium Mining and Hydrogeology (UMH I) was held in Freiberg being organized by the Department of Geology at the technical University Freiberg by the support of the Saxon State Ministry of Geology and Environment. Due to the large scientific interest in the topic of uranium a second conference (UMH II) took place in Freiberg in September 1998.

Uranium - Past and Future Challenges Broder J. Merkel, Alireza Arab, 2014-08-28 This book is the collection of papers from the latest International Uranium Mining and Hydrogeology Conference (UMH VII) held in September 2014, in Freiberg, Germany. It is divided to five sessions: Uranium Mining, Uranium and Phosphates, Clean-up technologies for water and soil. Uranium and daughter nuclides and basic research and modeling. Each session covers a wide range of related topic and provides readers with up to date research and solutions on those matters.

Minerals Yearbook Mines Bureau, Geological Survey, Interior Department, 2018-04-19 - Minerals Yearbook, 2014, V. 3: Area Reports: International: Asia and the Pacific. It continues with individual country chapters that examine the mining, refining, processing, and use of minerals in each country of the region and how each country's mineral industry relates to U.S. industry. Most chapters include production tables and industry structure tables, information about Government policies and programs that affect the country's mineral industry, and an outlook section.

Nuclear Theory Degree Zero: Essays Against the Nuclear Android John Kinsella, Drew Milne, 2021-05-13 Nuclear Theory Degree Zero: Essays Against the Nuclear Android investigates the threat conveyed and maintained by the nuclear cycle: mining, research, health, power generation and weaponry. Central to this polyvalent 'report' on the infiltration of our lives and control over them exerted by the industrial-military complex, are critiques of the creation, storage and use of atomic weapons, the exploitation of Australian Aboriginal people and their lands through British atomic testing in the 1950s, and an exposé of a language of denial in the world of nuclear mining/energy/military usages. 'Nuclear' is also parenthetically investigated in its function as extended metaphor and question for poetry and poetics. Key is a consideration of the use of the language of the 'atomic' in cultural spaces, and in 'the arts'. Indigenous land-rights claims in the face of uranium mining, the semantics of waste and of the glib usage by nuclear power companies of the fact of global warming to suit their own

corrosive agendas. The triumphalism of scientific and cultural discourse around 'nuclear' and the threats by nuclear fission are by association brought into question. The nuclear cycle throws the whole future of human beings into doubt, and this book seeks to assemble new resources of resistance through creative and critical mediums, including poetry and poetics. The chapters in this book were originally published as a special issue of *Angelaki*.

Power, Profit and Protest Verity Burgmann, 2020-08-04 'a provocative must-read text for an engaged public, offering a distinctive Australian take on corporate globalism, and grounding this in a robust theory of social change that emphasises material power and interests, along with symbolic power and ideology' James Goodman, University of Technology Sydney Social movements transformed Western societies in the 1960s and 1970s: feminism, black rights, the peace movement and gay liberation all radically altered how we think and how we live. What has happened to social movements since then? Can demonstrations and other forms of social activism still make a difference in Australia? Verity Burgmann argues that

corporate globalisation has threatened or transformed established social movements, and sparked powerful new forms of social protest. She examines the impact of globalisation and neo-liberal government policies on the feminist and indigenous rights movements, showing how they have been affected by the politics of backlash after decades of success. She explores the way in which the environment movement, too, has been affected by rising corporate political influence. She also analyses the emergence of anti-capitalist and anti-corporate activism and the profound challenges posed by this newest of social movements to the state, to society in general and to the labour movement in particular. These important factors in a changing political landscape. This book reflects on the significant changes which has taken place since *Power and Protest* was published in 1993.

Earth Wars Geoff Hiscock, 2012-04-24 A fascinating insight into the global battle for our energy future The global competition for scarce natural resources that pits the West against the super-hot economies of China and India, plus a clutch of other contenders including Russia, Brazil, and Indonesia, has become one of the biggest issues facing the world today. Whether it is the rare metal lithium found in salt pans in the Andes, gas from the Caspian Sea, oil off the coast of Brazil, coal from Africa's Zambezi River, or uranium from Kazakhstan, China and India are desperate to ensure the security of their future energy supplies. The same goes for food and water, as contamination and over-use take their toll, the need to provide continued access for the next generation and beyond has increased exponentially. In *Earth Wars: The Battle for Global Resources*, international business journalist Geoff Hiscock explores the problems, potential solutions, and inevitable tensions in this ongoing scramble for finite natural resources. Going beyond big power politics to explore resource ownership and the use of innovative technology to get the most out of them, the book takes a forward-looking approach to this pressing issue. Written in clear, jargon-free language, it tells the global resources story in a fresh and engaging way that anyone can understand. Includes insightful, up-to-the-minute coverage of the most pressing debates over resource allocations Discusses the major Chinese and Indian businesses that are just becoming known to those in the West (Sinopec, CNOOC, CNPC, Indian Oil, ONGC, Reliance, Coal India, SAIL, and many others) Presents resource- and region-specific chapters to help readers view the pertinent issues from multiple angles As the economies of China and India grow to challenge those of the West, the battle over natural resources will continue to heat up. *Earth Wars* looks at this very real problem in-depth, presenting a definitive look at one of the greatest challenges of our time.
