Forecasting in Mathematics Abdo Abou Jaoude, 2021-01-27 Mathematical probability and statistics are an attractive, thriving, and respectable part of mathematics. Some mathematicians and philosophers of science say they are the gateway to mathematics' deepest mysteries. Moreover, mathematical statistics denotes an accumulation of mathematical discussions connected with efforts to most efficiently collect and use numerical data subject to random or deterministic variations. Currently, the concept of probability and mathematical statistics has become one of the fundamental notions of modern science and the philosophy of nature. This book is an illustration of the use of mathematics to solve specific problems in engineering, statistics, and science in general.

Disaster Law Amita Singh, 2017-07-28 This book looks at how legal frameworks can and do reduce risks arising out of disasters. The volume: analyses existing disaster laws and the challenges on the ground; brings together case studies from some of the most vulnerable regions; and proposes solutions to avert existing and possible future crises. The book offers appropriate legal frameworks for disaster management which could not only offer sustainable institutional reforms towards community resilience and preparedness but also reduce risk within the frameworks of justice, equity and accountability. It examines the intricacies of governance within which governments function and discusses how recent trends in infrastructure development and engineering technology could be balanced within the legal principles of ethics, transparency and integrity. The chapters in the volume suggest that legal frameworks ought to resonate with new challenges of resource management and climate change. Further, these frameworks could help secure citizens' trust, institutional accountability and effective implementation through an unceasing partnership which keeps the community better prepared and more resilient. This volume will be indispensable to scholars and researchers of disaster management, law, public policy, environment and development studies as well as policymakers and those in administrative, governmental, judicial and development sectors.

Simulation Modeling - Recent Advances, New Perspectives, and Applications Abdo Abou Jaoudé, 2024-09-11 A simulation is the imitation of the operation of a real-world process or system over time. Simulations require the use of models in which a model represents the key characteristics or behaviors of the selected system or process and the simulation represents the evolution of the model over time. Computers are often used to execute simulations. This book provides a comprehensive overview of simulation modeling and explores its use to solve a large set of problems. It is a useful resource

for scholars, researchers, and undergraduate and graduate students in pure and applied mathematics, physical sciences, engineering and technology, computer science, numerical analysis, scientific computing, and science in general.

Degree Mills John Bear, 2012-04-24 When the first edition of Degree Mills was published, fake universities and counterfeit degrees were already a significant problem. Fueled by the Internet, this scam continues to grow—now more than half of all people claiming a new PhD in fact have a fake degree. In this updated edition, experts Allen Ezell and John Bear go beyond exposing these fraudulent practices to provide detailed recommendations—for government agencies, educational institutions, and individuals—on what can be done to rid us of them. This eye-opening and definitive guide shows how degree mills operate and how to check the validity of anyone's degree—an indispensable reference book.

Internationalization in Mexican Higher Education Laura Patricia Cruz Ruiz, 2016 In the era of globalization since the 1990s, international cooperation has become one of the most challenging topics of debate and research in higher education. This book attempts to provide scientific evidence on the debates and different types of internationalization found in higher education from a Mexican point of view. It identifies German and Mexican partnership collaborations in institutions of higher education as well as the experiences of German and Mexican university personnel involved in educational projects. The findings are based on qualitative research using documentary evidence, semi-structured expert interviews and qualitative content analysis. The study encompasses three levels. At the macro level, internationalization of higher education is discussed in a general way but with a focus on the Mexican situation, presenting a typology of prevailing types of internationalization. The meso level includes a secondary analysis of official data on the bilateral relations between German and Mexican institutions of higher education. The micro level presents a case study of two particular university collaborations using the experiences of those involved in both countries. Laura Patricia Cruz Ruiz (born 1972 in Chiapas, Mexico) studied in the field of education at the Business and Pedagogical Development University (UNIVDEP) in Mexico City,

where she received her Master Degree (M.A.) in 2008. She has worked at the Mexican Secretariat of Health and Education as well as in the National Council of Science and Technology (CONACyT), from which, in 2010, she obtained a scholarship for her doctoral studies in Germany. She held a German-Mexican scholarship for international capacity building in Germany from 2005-2006. In 2015, she completed her doctoral degree (Dr. phil.) at the Faculty for Philosophy and Educational Research in the field of Comparative Education at Ruhr University Bochum in Germany.

The Use of Dispersants in Marine Oil Spill Response National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Ocean Studies Board, Committee on the Evaluation of the Use of Chemical Dispersants in Oil Spill Response, 2020-05-24 Whether the result of an oil well blowout, vessel collision or grounding, leaking pipeline, or other incident at sea, each marine oil spill will present unique circumstances and challenges. The oil type and properties, location, time of year, duration of spill, water depth, environmental conditions, affected biomes, potential human community impact, and available resources may vary significantly. Also, each spill may be governed by policy guidelines, such as those set forth in the National Response Plan, Regional Response Plans, or Area Contingency Plans. To respond effectively to the specific conditions presented during an oil spill, spill responders have used a variety of response options—including mechanical recovery of oil using skimmers and booms, in situ burning of oil, monitored natural attenuation of oil, and dispersion of oil by chemical dispersants. Because each response method has advantages and disadvantages, it is important to understand specific scenarios where a net benefit may be achieved by using a particular tool or combination of tools. This report builds on two previous National Research Council reports on dispersant use to provide a current understanding of the state of science and to inform future marine oil spill response operations. The response to the 2010 Deepwater Horizon spill included an unprecedented use of dispersants via both surface application and subsea injection. The magnitude of the spill stimulated interest and funding for research on oil spill response, and dispersant use in particular. This study assesses the effects and efficacy of dispersants as an oil spill response tool and evaluates trade-offs associated with dispersant use.

Artificial Intelligence and Heuristics for Smart Energy Efficiency in Smart Cities Mustapha Hatti, 2021-11-24 This book emphasizes the role of micro-grid systems and connected networks for the strategic storage of energy through the use of information and communication techniques, big data, the cloud, and meta-heuristics to support the greed for artificial intelligence techniques in data and the implementation of global strategies to meet the challenges of the city in the broad sense. The intelligent management of renewable energy in the context of the energy transition requires the use of techniques and tools based on artificial intelligence (AI) to overcome the challenges of the intermittence of resources and the cost of energy. The advent of the smart city makes an increased call for the integration of artificial intelligence and heuristics to meet the challenge of the increasing migration of populations to the city, in order to ensure food, energy, and environmental

security of the citizen of the city and his well-being. This book is intended for policymakers, academics, practitioners, and students. Several real cases are exposed throughout the book to illustrate the concepts and methods of the networks and systems presented. This book proposes the development of new technological innovations—mainly ICT—the concept of “Smart City” appears as a means of achieving more efficient and sustainable cities. The overall goal of the book is to develop a comprehensive framework to help public and private stakeholders make informed decisions on smart city investment strategies and develop skills for assessment and prioritization, including resolution of difficulties with deployment and reproducibility.

Artificial Intelligence and Renewables Towards an Energy Transition Mustapha Hatti, 2020-12-17 This proceedings book emphasizes adopting artificial intelligence-based and sustainable energy efficiency integrated with clear objectives, to involve researchers, students, and specialists in their development and implementation adequately in achieving objectives. The integration of artificial intelligence into renewable energetic systems would allow the rapid development of a knowledge-based economy suitable to the energy transition, while fully integrating the renewables into the global economy. This is how artificial intelligence has hand in by conceptualizing this transition and above all by saving time. The knowledge economy is valued within the smart cities, which are fast becoming the favorite places where the energy transition will take place efficiently and intelligently by implementing integrated approaches to energy saving and energy supply and integrated urban approaches that go beyond individual interventions in buildings or transport modes using information and communication technologies.

Land and Disaster Management Strategies in Asia Huong Ha, 2014-09-01 This book focuses on land and disaster governance in Asian countries. The Asian region has become increasingly vulnerable to natural disasters, including floods, cyclones, storms, earthquakes, drought, typhoons and tsunamis. Further, as a result of unsustainable changes being made in patterns of land use, catchment and coastal zones, increasing population density, migration patterns, and the spread of consumer culture across countries, the impact of natural disasters has increased manifold. The book addresses two major concerns in this field. Firstly, it discusses topics intended to raise awareness among all stakeholders of the critical aspects of disaster management in the context of Asia. Secondly, it calls upon policymakers, researchers, academics, practitioners, private enterprises and civil society organizations, as well as all those who have been, are and will be affected by natural disasters to search for innovative and novel approaches to reducing risk and managing disasters.

Unlock the Genius Within Janik, MD, PhD, Daniel S., 2005-09-08 Here, Daniel S. Janik, MD, PhD, argues replacing

education and teaching with non-traumatic, curiosity-based, discovery-driven, and mentor-assisted transformational learning. *Unlock the Genius Within* is an easy read that explains-in conversational manner-the newest ideas on neurobiological and transformational learning beginning with what's wrong with education and ending with a call for reader participation in developing and applying neurobiological learning and transformational learning theory and methodology. Janik draws extensively from his own experiences first as a physician working with psychological recovery from trauma, and then as an educator and linguist in applying neurobiological-based transformational learning in clinics, classrooms, and tutoring. Features: ·Descriptions of classical and contemporary research alongside allusions to popular movies and television programs ·Suggested further readings ·Neurobiological learning web resources Throughout this book, the author incorporates humor, wisdom, and anecdotes to draw readers into traditionally incomprehensible concepts and information that demonstrates transformational learning. Recent Advances in Monte Carlo Methods Abdo Abou Jaoudé,2024-05-15 Monte Carlo methods, or Monte Carlo experiments, are a broad class of computational algorithms that rely on repeated random sampling to obtain numerical results. This book provides a comprehensive overview of these methods, discussing their fundamental aspects and their applications in solving a large array of problems. *Recent Advances in Monte Carlo Methods* is a useful reference for scholars, researchers, and students in pure and applied mathematics, physical sciences, engineering and technology, computer science, numerical analysis, scientific computing, and the general sciences.

Disaster Risk Reduction Bupinder Zutshi,Akbaruddin Ahmad,Ananda Babu Srungarapati,2018-07-10 This book discusses the interconnected, complex and emerging risks in today's societies and deliberates on the various aspects of disaster risk reduction strategies especially through community resilience and responses. It consists of selected papers presented at the World Congress on Disaster Management, which focused on community resilience and responses towards disaster risk reduction based on South Asian experiences, and closely examines the coordinated research activities involving all stakeholders, especially the communities at risk. Further, it narrates the experiences of disaster risk-reduction in different communities that have policy implications for mitigation of future disaster risks in the societies affected by these types of disasters. Written from the social science perspective to disasters rather than an engineering approach, the book helps development and governance institutions to prioritize disasters as a problem of development rather than being parallel to it.

State and Market in Higher Education Reforms Hans G. Schuetze,Germán Álvarez Mendiola,Diane Conrad,2012-09-05 Universities have never been static. Even so, it is fair to say they have experienced a most radical transformation in the past twenty years. During this period, the role and responsibility of the state generally have been broadly limited while allowing 'market forces'--private ownership and control--more influence. But even where the state is still the main provider or funder,

it relies increasingly on 'market mechanisms', for example contractual relations between state and institutions, competition among providers for resources, and external assessment of 'outputs' which means the results or impact of what universities do, in particular teaching and research. The new terminology speaks of price and competition, inputs and outputs, resources, cost and benefits, demand and supply, provider and customer, consumers and investors, quality control and accountability. Education, and post-secondary education especially are increasingly seen as matters for markets. Formal post-secondary education becomes a service, commercialized and traded across national borders. This volume on changing relationship between state and market, contains, besides an introductory analytic overview of the issues, accounts from different countries, regions, and thematic perspectives. Chapter authors describe and analyze government reforms and other developments that have directly or indirectly affected this relationship. Although the geographical focus is on North America, especially Mexico, South East Asia and Europe, the phenomenon is not limited to these regions and countries but worldwide.

Electricity Use in Namibia Dr. Godwin Norensa Osarumwense Asemota,2013-02-07 By 2007, electricity demand in

Namibia, Southern Africa, outstripped the supply capacity in the region. Namibia relies on other sources to provide 53 percent of its local electricity needs. This disparity necessitated either the introduction of new generation capacity or load management to supply the shortfall in electricity demand, with a subsequent rise in electricity costs. In *Electricity Use in Namibia*, author Dr. Godwin Norense Osarumwense Asemota explores load management methodologies vital to the effective, efficient, and successful operation of any power utility—in order to reduce electricity demand peaks, lower utility production cost, reduce consumer cost, match consumer loads with supply constraints, and improve availability. Asemota provides the background of the study, discusses the historical perspective of Namibian Utility, presents a literature review, details the research methodology, shares the results of the questionnaire through figures and tables, provides thorough analyses, and offers a conclusion and recommendations. *Electricity Use in Namibia* communicates the steps necessary to strengthen Namibia's electricity backbone in order to facilitate a stable future for the country.
