Se explicarán las labores necesarias de preparación del terreno para proporcionar las condiciones óptimas de implantación del cultivo, realizando las mismas en un caso práctico teniendo en cuenta las medidas de prevención de riesgos laborales y normativa medioambiental. Computos, costos y presupuestos José Luis Macchia,2021-06-17 Los profesionales que transitamos el tercer milenio, merecemos información bibliográfica acorde con los tiempos que vivimos, por tal motivo ya no pueden existir publicaciones de formación técnica que no se actualicen constantemente, para adaptarse a los cambios tecnológicos y económicos que inevitablemente se producen en el mundo. Nuevos materiales que aparecen continuamente en el mercado de la construcción, han ido cambiando tiempos de ejecución de ciertas tareas. Maquinarias y equipos manuales, cada vez más al alcance de todos los niveles de mano de obra, van cambiando la fisonomía de las obras de construcción. Por ejemplo, ya nadie piensa en el apagado de cal viva en obra.... Los trabajos de construcciones en seco son un Rubro más de casi todas las obras. Las estructuras de hormigón casi siempre se realizan mediante el bombeo del material. Prácticamente no existen los puntales de madera, hoy se utilizan encofrados metálicos con puntales tubulares. Hay materiales que ya no se usan como el polvo de ladrillo para las mezclas. Así podríamos citar muchas otras nuevas alternativas, de construcción moderna. Por todos estos motivos y contando con el consentimiento del Editor, se decidió ampliar el alcance de algunos temas, ya incluidos en las

ediciones anteriores, con el propósito que los mismos permanezcan siempre actualizados frente a la realidad que atraviesa, esta tan particular industria, pues de poco serviría un libro que enseña a confeccionar presupuestos, si se quedase atrasado respecto de los tiempos tecnológicos que vivimos.
