**Manual de lucha contra la contaminación por hidrocarburos** José María Silos Rodríguez, 2008-05-30 Cuando se produce en el mar un derrame de hidrocarburo, la planificación previa, la evaluación de la situación y la rapidez de la respuesta constituyen los elementos claves de una actuación eficaz. En este manual, además de las investigaciones propias, se ha recogido y sistematizado de una forma sencilla y útil la abundante bibliografía existente sobre el tema y que se encuentra dispersa en numerosas publicaciones, sobre todo en lengua inglesa y que son costosas y de difícil adquisición. Se pretende con ello contar con una ayuda de primera mano que sirva como guía para poder desarrollar estos tres elementos claves que constituyen el abecedario de la lucha contra la contaminación por hidrocarburos. Por ello está orientado a los estudiantes de las Facultades de Ciencias Náuticas, Ciencias del Mar y Ambientales, y a todos aquellos profesionales que ejercen responsabilidades en las operaciones de lucha y limpieza de los derrames de hidrocarburos. Con una base teórica imprescindible se desarrollan de forma sencilla, con tablas y cuadros, todas las etapas de esta difícil misión, desde la evaluación de la situación a los planes de contingencia, medios de lucha, actuaciones en la costa, y demás aspectos de este tema inagotable y en continuo desarrollo.

**Cadena productiva de los hidrocarburos** Emiliano Ariza,2024-06-20 Este libro trae a la memoria que la industria del petróleo, con apenas dieciséis décadas de haber sido descubierta, ha transformado el desarrollo de la humanidad como una fuente de energía y seguirá representando, junto con el gas natural, cerca de la mitad de la canasta energética, incluso más allá del año 2050. Se destaca el hecho de que del proceso de refinación de petróleo no solo se obtienen los combustibles, sino muchas materias primas para producir lubricantes, plásticos, textiles, pinturas, llantas, sustancias agroquímicas y una gran variedad de productos que han hecho la vida más cómoda. También el gas natural, otro de los hidrocarburos que se encuentra en yacimientos de manera libre o asociado al petróleo, además del uso doméstico e industrial, es la fuente fundamental para la petroquímica, y se considera que será el combustible para la transición energética. El autor, desde una perspectiva analítica y crítica, ilustra la cadena productiva de los hidrocarburos, detalla los procesos de exploración, producción, tratamiento, transporte, análisis de reservas mundiales y en Colombia, y la transformación en productos útiles

para el hombre y lo que representan en un mundo con incremento de la población que demanda mayor energía y que, junto con los demás recursos energéticos renovables y no renovables, harán parte de esa matriz energética para cubrir estas necesidades. También aborda las fuentes de energías renovables o energías alternativas, que indiscutiblemente se requiere desarrollar para gradualmente ir cubriendo los recursos no renovables; como los hidrocarburos, que cada vez serán más escasos y valiosos, y que se deben utilizar específicamente para cumplir una función muy especial como es la producción y la transformación de materias primas sintéticas muy difíciles de substituir por otros materiales. Este texto es ideal para los interesados en la energía sostenible y en comprender mejor el papel de los hidrocarburos en la matriz energética actual y futura para lograr una transición energética equitativa, confiable y segura.
