MoE (Mixture-of-Experts) is a technique used in deep learning to improve the performance of models. It involves combining the outputs of multiple expert models, each specialized in a different task or domain. This approach allows the model to leverage the strengths of different experts, leading to improved performance across a wide range of tasks.

MoE is a key component of GPT-4, which is a large language model developed by OpenAI. GPT-4 is designed to be a general-purpose model that can perform a wide variety of tasks, from natural language processing to computer vision. MoE is used in GPT-4 to enable the model to handle a large number of different tasks simultaneously, without the need for a large number of separate models.

MoE is also used in other large language models, such as Google's Gemini and Microsoft's Copilot. These models use MoE to improve their performance on a wide range of tasks, from natural language processing to computer vision. MoE is a powerful technique that has the potential to revolutionize the field of deep learning.
