java - how to Call super constructor in Lombok - Stack Overflow Apr 20, 2015 · how to Call super constructor in Lombok Asked 10 years, 4 months ago Modified 1 year, 1 month ago Viewed 339k times **python - replace block within { { super () } } - Stack Overflow** In the child template, I would like to include everything that was in the head block from the base (by calling { { super() } }) and include some additional things, yet at the same time replace the title block within the super call. **How does Python's super () work with multiple inheritance?** In fact, multiple inheritance is the only case where super() is of any use. I would not recommend using it with classes using linear inheritance, where it's just useless overhead. **super () in Java - Stack Overflow** Sep 22, 2010 · super() is a special use of the super keyword where you call a parameterless parent constructor. In general, the super keyword can be used to call overridden methods, access hidden fields or invoke a superclass's constructor. *Understanding Python super() with __init__() methods* Feb 23, 2009 · Super simply guarantees we call the correct next class's method in the method resolution order, whereas the other way hard-codes the next method to be called, which makes cooperative multiple inheritance more difficult. [oop - What does 'super' do in Python? - Stack Overflow](#) Nov 3, 2015 · The one without super hard-codes its parent's method - thus it has restricted the behavior of its method, and subclasses cannot inject functionality in the call chain. The one with super has greater flexibility. The call chain for the methods can be ... **What is a difference between <? super E> and <? extends E>?** Sep 2, 2009 · The first (<? super E>) says that it's "some type which is an ancestor (superclass) of E"; the second (<? extends E>) says that it's "some type which is a subclass of E". (In both cases E itself is okay.) So the constructor uses the ? extends E form so it guarantees that when it fetches values from the collection, they will all be E or some subclass (i.e. it's compatible). The drainTo method ... *coding style - Using "super" in C++ - Stack Overflow* As for chaining super::super, as I mentioned in the question, I have still to find an interesting use to that. For now, I only see it as a hack, but it was worth mentioning, if only for the differences with Java (where you can't chain "super"). ['super' object has no attribute '__sklearn_tags__'](#) Dec 18, 2024 · 'super' object has no attribute '__sklearn_tags__'. This occurs when I invoke the fit method on the RandomizedSearchCV object. I suspect it could be related to compatibility issues between Scikit-learn and XGBoost or Python version. I am using Python 3.12, and both Scikit-learn and XGBoost are installed with their latest versions. *Python: 'super' object has no attribute 'attribute_name'* After the base class's __init__ ran, the derived object has the attributes set there (e.g. some_var) as it's the

very same object as the self in the derived class' `__init__`. You can and should just use `self.some_var` everywhere. `super` is for accessing stuff from base classes, but instance variables are (as the name says) part of an instance, not part of that instance's class.
