Alimentation, processus technologiques et contrôles, 2009 La 4e de couverture indique : À travers des applications concrètes et dirigées, ce manuel propose une approche pratique et dynamique de l'alimentation et des procédés associés : acteurs et territoires du produit alimentaire, ligne de production, machine de fabrication, utilisation des agents de texture, utilisation du vivant, écologie microbienne en bioindustrie et environnement, et contrôles associés, analyse sensorielle, mise en place et utilisation des systèmes qualité, nutrition et alimentation, diversité des produits et leur présentation, et enfin traitement des effluents des entreprises agroalimentaires. Pour chacun de ces thèmes, des documents sur le sujet sont d'abord présentés. Puis une partie pratique et expérimentale (travaux dirigés et travaux pratiques) permet à l'apprenant d'utiliser ses connaissances, avant de terminer par des activités pluridisciplinaires illustrées également par des exercices. Un rappel des notions clés et des approfondissements est ensuite présenté. Cet ouvrage est conçu pour faciliter l'acquisition des capacités professionnelles et technologiques des élèves, ce qui en fait un excellent support de cours pour l'enseignant et pour l'apprenant.

Expérimentation en biologie et physiologie végétales Roger Prat, 2007-07-03 Cet ouvrage propose des protocoles d'observations et d'expériences simples réalisables dans une classe de biologie et physiologie végétales du secondaire. Pour chaque expérience, le but recherché, le matériel nécessaire, le protocole expérimental, les résultats et les critiques éventuelles sont soigneusement décrits. Ont été exclues de cet ouvrage les manipulations complexes nécessitant des matériels sophistiqués de niveau laboratoire de recherche. Un cédérom, gratuit sur demande, permet au lecteur de visualiser l'ensemble de l'illustration de l'ouvrage sous un format de grande taille et de qualité. Public : professeurs de sciences naturelles des collèges et des lycées, étudiants préparant les concours de Capes et Agrégation de biologie, étudiants des

classes préparatoires aux écoles agronomiques, étudiants universitaires des licences et masters de biologie, étudiants en pharmacie.

L'approche expérimentale en biologie Dominique Galiana, 2002 Réflexion didactique sur la pratique expérimentale en cours de biologie : Comment, pourquoi, quand organiser telle ou telle manipulation ? Comment l'exploiter au mieux ? Propose des outils pour préparer et évaluer les travaux pratiques. L'ouvrage s'intéresse à la manière dont les élèves apprennent et les bénéfices qu'ils peuvent en tirer, et tente de préciser les difficultés à l'apprentissage.
