How Big is It? Ben Hillman, 2007 Interesting facts about some of the world's biggest things.

How Big is Big? Robert Gardner, 2014-12-15 What is the volume of your bedroom? How much space does a ball of clay take up? Does water take up more space when it freezes? Everything around you has volume, or takes up space. The ideas in this book will help you learn what volume is and how it can be measured. Using simple materials, you can do everything a scientist does: conduct experiments, keep records, and draw conclusions from what you have learned. Many chapters also include follow-up questions and ideas that are very useful if you are interested in entering a science fair. Lots of colorful drawings make the written instructions easy-to-follow.

How Big is Big and How Small is Small Timothy Paul Smith, 2013-10-24 This book is about how big is the universe and how small are quarks, and what are the sizes of dozens of things between these two extremes. It describes the sizes of atoms and planets, quarks and galaxies, cells and sequoias. It is a romp through forty-five orders of magnitude from the smallest sub-nuclear particles we have measured, to the edge of the observed universe. It also looks at time, from the epic age of the cosmos to the fleeting lifetimes of ethereal particles. It is a narrative that trips its way from stellar magnitudes to the clocks on GPS satellites, from the nearly logarithmic scales of a piano keyboard through a system of numbers invented by Archimedes and on to the measurement of the size of an atom. Why do some things happen at certain scales? Why are cells a hundred thousandths of a meter across? Why are stars never smaller than about 100 million meters in diameter? Why are trees limited to about 120 meters in height? Why are planets spherical, but asteroids not? Often the size of an object is determined by something simple but quite unexpected. The size of a cell and a star depend in part on the ratio of surface area to volume. The divide between the size of a spherical planet and an irregular asteroid is the balance point between the gravitational forces and the chemical forces in nature. Most importantly, with a very few basic principles, it all makes sense. The world really is a most reasonable place.

Dialogue and Learning in Mathematics Education Helle Alrø, Ole Skovsmose, 2002 Dialogue and Learning in Mathematics Education is concerned with communication in mathematics class-rooms. In a series of empirical studies of project work, we follow students' inquiry cooperation as well as students' obstructions to inquiry cooperation. Both are considered important for a theory of learning mathematics. Special attention is paid to the notions of 'dialogue' and 'critique'. A central idea is that 'dialogue' supports 'critical learning of mathematics'. The link between dialogue and critique is developed further by including the notions of 'intention' and 'reflection'. Thus a theory of learning mathematics is developed which is resonant with critical mathematics education.
