Theories of Human Growth and Development: Developmental Psychology Theresa Lowry-Lehnen, 2015-05-12

Developmental psychology is the branch of psychology and the scientific study of how people grow and change over the course of a lifetime. Originally concerned with infants and children it expanded to include adolescence, adult development, ageing, and the entire lifespan. Beginning with Sigmund Freud (1856-1939) and Jean Piaget (1896-1980), the early focus of developmental psychology was on the maturation of children. Within the last three decades, researchers who study human development have expanded their focus to examine change across a broad range of topics including psycho-physiological processes; cognitive development involving areas such as problem solving, moral and conceptual understanding; language acquisition; social, personality, emotional development, self-concept and identity formation. The scientific study of human growth and development is important not only to psychology, but also to biology, sociology, anthropology, education, history and health care. Most important, however, are its practical applications. By better understanding how and why people change and grow, the knowledge can be applied to help people to reach their full potential.

Human Growth and Development Chris Beckett, Hilary Taylor, 2016-04-12 What is it that determines what sort of person we become? Is a child's future personality already determined at birth, or is a newborn baby like a blank sheet, waiting to be written on by life? Is our personality determined by anything, or do we choose for ourselves who we are, create ourselves out of nothing? This bestselling introduction to emotional, psychological, intellectual and social development throughout the lifespan will help you explore these questions and many more. Written for students training for careers in the helping professions, including nurses, social workers, occupational therapists, teachers and counsellors, the book covers topics which are central to understanding people whether they are clients, service users, patients or pupils. Following the shape of a human life, beginning with birth and ending with death, it combines theoretical concepts and reflective learning to help you develop an understanding of what makes human beings grow and change over their lives to inform your decisions and professional practice.
