The Nebra Sky-disc Regine Maraszek, 2009

The Nebra Sky Disc Howard Crowhurst, 2012-12 Following his groundbreaking work on the Carnac alignments, Howard Crowhurst reveals the hidden meaning of one of the most enigmatic objects ever unearthed and shows the profound understanding it encodes. The Nebra Sky Disc is the oldest representation of the night sky known to date. Made of precious metals from different parts of Europe, it is the Rosetta stone of prehistoric astronomy and shows the existence of time cycles maintained to the present day. Crowhurst's astounding discoveries stem from the 39 holes punched out around the disc's perimeter which hold the key to a pattern in the solar system. These holes have been totally ignored by all researchers until now. Photos and diagrams are in color to facilitate understanding. According to reviewer's, the book is very readable.

Mask of the Sun John Dvorak, 2017-03-07 What do Emily Dickinson, slave revolts, Babylonian Kings, and Monticello all have in common? A solar eclipse. Whether it was deciding on the location of a grand home (or castle), inspiring poetry, timing battles and revolts, or planning expeditions, eclipses have inspired fear and fascination. Solar eclipses allowed Ptolemy to determine the length of the Mediterranean and helped Einstein establish his General Theory of Relativity. Preliterate societies recorded eclipses on turtle shells found in The Wastes of Yin and on the Mayan Dresden Codex. Eclipses were later instrumental in the creation of longitude and allowed Hubble to understand the expansion of the Universe (and disprove another theory of Einstein's in the process). John Dvorak, the acclaimed author of *Earthquake Storms* and *The Last Volcano*, examines this amazing phenomena and reveals the humanism behind the science. With insightful detail and vividly accessible prose, he provides explanations as to how and why eclipses occur—as well as insight into the eclipse of 2017, which was visible across North America.

Our Moon Rebecca Boyle, 2025-06-03 LONGLISTED FOR THE NATIONAL BOOK AWARD • NATIONAL BESTSELLER • “A riveting feat of science writing that recasts that most familiar of celestial objects into something eerily extraordinary, pivotal to our history, and awesome in the original sense of the word.”—Ed Yong, New York Times bestselling author of *An Immense World* WINNER OF THE LOS ANGELES TIMES BOOK PRIZE • A NEW YORKER AND SMITHSONIAN BEST BOOK OF THE YEAR • A New York Times Book Review Editors’ Choice Many of us know that the Moon pulls on our oceans, driving the tides, but did you know that it smells like gunpowder? Or that it was essential to the development of science and religion? Acclaimed journalist Rebecca Boyle takes readers on a dazzling tour to reveal the intimate role that our 4.51-billion-year-old companion has played in our biological and cultural evolution. Our Moon’s gravity stabilized Earth’s orbit—and its climate. It drew nutrients to the surface of the primordial ocean, where they fostered the evolution of complex life. The Moon continues to influence animal migration and reproduction, plants’ movements, and, possibly, the flow of the very blood in our veins. While the Sun helped prehistoric hunters and gatherers mark daily time, early civilizations used the phases of the Moon to count months and years, allowing them to plan farther ahead. Mesopotamian priests recorded the Moon’s position in order to make predictions, and, in the process, created the earliest known empirical, scientific observations. In *Our Moon*, Boyle introduces us to ancient astronomers and major figures of the scientific revolution, including Johannes Kepler and his influential lunar science fiction. Our relationship to the Moon changed when Apollo astronauts landed on it in 1969, and it’s about to change again. As governments and billionaires aim to turn a profit from its resources, Rebecca Boyle shows us that the Moon belongs to everybody, and nobody at all.

Countless archaeological sites and artefacts relating to the diverse prehistoric peoples who occupied the landscapes of Europe thousands of years ago, have been unearthed, either by archaeologists, or by lucky individuals who stumbled across them by chance. *Prehistoric Europe: 50 Great Discoveries* examines a small, but carefully chosen selection of sites and artefacts from among this abundance of archaeological evidence, all of which are remarkable, and provides fascinating insights into Europe's distant past and its long-lost prehistoric societies. These 50 discoveries cover some sixty thousand years of European prehistory, beginning in the Middle Paleolithic ('Old Stone Age'), the time of our enigmatic ancient cousins, the Neanderthals, and ending in the Iron Age, the time of 'Celtic' society, and marking the last chapter in the remarkable story of prehistoric Europe. Lying between the Middle Paleolithic and the Iron Age discoveries are those from Mesolithic ('Middle Stone Age'), Neolithic ('New Stone Age'), Chalcolithic ('Copper Age'), and Bronze Age Europe. The Mesolithic, Neolithic, Chalcolithic and Bronze Age, mark the time of Europe's final hunter-gatherer societies, its first farming communities, and the emergence of metalworking, respectively.

Rhapsody of Northern Art Peter Hupfaut,2019-01-23 Rhapsody of Northern Art presents fascinating artefacts produced between the late Bronze Age and the start of the Romanesque Period. Ancient objects from Northern Europe, exhibited in museums, are usually appreciated as documenting the past and reflecting its society. The people viewing these objects are able to become aware of skills and techniques that were applied many generations ago. However, a number of such objects should certainly be regarded more as works of fine art. Since the early 20th century, artists such as Duchamp have created “object art” and installations from contemporary artists often show art of a quality similar to that of some ancient Central and Northern European cultures. This book will serve to help and encourage readers to see and appreciate Bronze Age and early Medieval artefacts of Central and Northern Europe in the way they do works of art created by internationally well-known contemporary artists.

Bone Antler Stone Tim Miller,2019-07-03 Passing through more than thirty thousand years of history, the poems of Bone Antler Stone are a panorama of Europe from the painted caves of Chauvet and Lascaux to contact with Greece and Rome. The changing spiritual and material lives of the earliest Europeans are vividly imagined through their artwork, burials, architecture, and their interaction with the landscape, the seasons, and one another.

Outer Space in Society, Politics and Law Christian Brünner,Alexander Soucek,2012-08-30 Spaceflight is a rational undertaking, yet full of emotions. It is a dream of mankind and a multi-billion industry likewise. It is subject to a distinct branch of law – and moreover part of modern pop culture. In short: spaceflight is fascinating. “Outer Space in society, politics and law” is an inter-disciplinary approach to the understanding of modern space law. Technical, cultural and historical aspects lay the foundation for a sound comprehension why space law norms have been established and what they mean in practice. The reader will realize the impact space and spaceflight have on society – from Stonehenge to climate change. A new approach to presenting space law: comprehensive and illustrative. “We live in a society absolutely dependent on science and technology and yet have cleverly arranged things so that almost no one understands science and technology. That's a clear prescription for disaster.” Carl Sagan
