ATLAS DEL JURÁSICO DE ASTURIAS García-Ramos, José Carlos, Piñuela, Laura, Lires, José, 2011-06-01 La costa centro oriental asturiana conserva un gran número y diversidad de huellas de dinosaurios y otros reptiles coetáneos que dan testimonio de la fauna que poblaba este territorio hace unos 150 millones de años. Estos yacimientos de icnitas, repartidos por los acantilados de los concejos de Villaviciosa, Colunga y Ribadesella, se encuentran entre los más importantes de la península Ibérica y constituyen la mayor y más variada concentración de pisadas de dinosaurios cuadrúpedos del Jurásico y las únicas de pterosaurios para dicho período. En 2001, el extraordinario valor de estos yacimientos fue reconocido y protegido con la declaración de Monumento Natural.; El Museo del Jurásico de Asturias es un centro de referencia de la investigación paleontológica y un poderoso foco de divulgación del conocimiento que tenemos sobre el pasado remoto del Principado, además de uno de los más relevantes atractivos turísticos y culturales de Asturias.; El Atlas del Jurásico de Asturias, editado por Ediciones Nobel y el equipo científico del Museo del Jurásico, conjuga también esas facetas: presenta la riqueza geológica y paleontológica de los acantilados de una parte de la costa asturiana, ofrece una reconstrucción del paisaje y de los ecosistemas del Jurásico, explica los principales acontecimientos que tuvieron lugar durante ese remoto período en el que los dinosaurios y otros reptiles poblaban el antiguo territorio asturiano y muestra los testimonios fósiles de estos míticos seres.

Oceanography and Marine Biology P. A. Todd, B.D. Russell, 2024-10-01 Oceanography and Marine Biology: An Annual Review remains one of the most cited sources in marine science and oceanography. The ever-increasing interest in work in oceanography and marine biology and its relevance to global environmental issues, especially global climate change and its impacts, creates a demand for authoritative refereed reviews summarising and synthesising the results of both historical and recent research. Six of the ten peer-reviewed contributions in Volume 62 are available to read Open Access via the webpage and on OAPEN. If you are interested in submitting a review for consideration for publication in OMBAR, please email the new co-Editors in Chief, Dr Peter Todd (dbspat@nus.edu.sg) and Dr Bayden Russell (brussell@hku.hk). Supplementary material is provided online on the Support Materials tab, for Reviews 2, 5, 6, 7, 8, 9 and 10. Volume 62 features a review of the biology,

ecology and conservation threats to the Iberian harbour porpoise; a look at the potential risk to Mediterranean cetaceans and sea turtles from floating marine macro litter; an overview of the recent history and physical environment of corals in the Andaman Sea; an exploration of the population biology of Snapper fish in South Australia; and a review of historical killings of small cetaceans in the Northeast Atlantic and Mediterranean Sea, among others. An international Editorial Board ensures global relevance and expert peer review, with editors from Australia, Canada, Hong Kong, Ireland, Singapore and the UK. The series volumes find a place in the libraries of not only marine laboratories and oceanographic institutes but also universities worldwide.

The Spanish Coastal Systems Juan A. Morales, 2018-09-03 This monograph presents the state of art of the geologic knowledge about the Spanish coast obtained through scientific research in the last 30 years. From a general point of view, coasts are the most quickly changing systems of the Earth. This is critical, since many human resources, such as the main part of economic and social activities, are located in the coastal areas. Especially in the case of Spain these coasts include cities, wide industrial areas (including harbor complexes), important ecologic systems, and our main economic resource: tourism. Understanding the dynamic functioning of each element of this coast is vital for correct future coastal management, so as to solve problems derived from bad plans developed in the last decades of the twentieth century. This is a valuable text for advanced graduate students and coastal researchers, which connects the specific dynamic functioning of the main Spanish coastal environments and their relationships with human activities.

Dinosaur Tracks Annette Richter, 2016-08-15 This look at the field of ichnology is "an excellent compendium and a timely piece on a rapidly expanding and changing area of research" (Quarterly Review of Biology). The latest advances in dinosaur ichnology are showcased in this comprehensive and timely volume, in which leading researchers and research groups cover the most essential topics in the study of dinosaur tracks. Some assess and demonstrate state-of-the-art approaches and techniques, such as experimental ichnology, photogrammetry, biplanar X-rays, and a numerical scale for quantifying the quality of track preservation. The high diversity of these up-to-date studies underlines that dinosaur ichnological research is a vibrant field, that important discoveries are continuously made, and that new methods are being developed, applied, and refined. This indispensable volume unequivocally demonstrates that ichnology has an important contribution to make toward a better understanding of dinosaur paleobiology. Tracks and trackways are one of the best sources of evidence to understand and reconstruct the daily life of dinosaurs. They are windows on past lives, dynamic structures produced by living, breathing, moving animals now long extinct, and they are every bit as exciting and captivating as the skeletons of their makers. Noah's Ravens James O. Farlow, 2018-10-08 How can the tracks of dinosaurs best be interpreted and used to reconstruct them? In many Mesozoic sedimentary rock formations, fossilized footprints of bipedal, three-toed (tridactyl) dinosaurs are preserved in huge numbers, often with few or no skeletons. Such tracks sometimes provide the only clues to the former presence of dinosaurs, but their interpretation can be challenging: How different in size and shape can footprints be and yet have been made by the same kind of dinosaur? How similar can they be and yet have been made by different kinds of dinosaurs? To what extent can tridactyl dinosaur footprints serve as proxies for the biodiversity of their makers? Profusely illustrated and meticulously researched, *Noah's Ravens* quantitatively explores a variety of approaches to interpreting the tracks, carefully examining within-species and across-species variability in foot and footprint shape in nonavian dinosaurs and their close living relatives. The results help decipher one of the world's most important assemblages of fossil dinosaur tracks, found in sedimentary rocks deposited in ancient rift valleys of eastern North America. Those often beautifully preserved tracks were among the first studied by paleontologists, and they were initially interpreted as having been made by big birds—one of which was jokingly identified as Noah's legendary raven.

Paleontología y dinosaurios desde América Latina, 2011

Dinosaurios Joaquín Moratalla, 2008-10-08 Los dinosaurios son, sin lugar a dudas, los animales que mayor fascinación ejercen entre el gran público. Fueron los reyes y señores de un mundo ignoto, conquistaron todos los continentes, durante muchos millones de años fueron los amos del planeta. Sea por su exotismo, por su monstruosidad, por su tamaño o porque representan una referencia mítica de un mundo perdido, de un pasado de leyenda y de un tiempo que nunca podrá repetirse, los dinosaurios son para los humanos unos hermanos mayores que nos recuerdan cuánto de fortaleza y de debilidad tiene todo ser vivo. En realidad, de lo que nosotros podemos hablar es de un grupo de organismos de los que solo conocemos su registro fósil. Su estudio es el objeto mismo de la paleontología. Con el rigor científico de su especialidad, Joaquín Moratalla, el primer paleontólogo español autor de una tesis sobre los dinosaurios, recoge en este libro -de un modo sencillo,

entretenido y de fácil lectura- el estado del conocimiento que hoy tenemos de nuestros antepasados. Saber más y mejor de los dinosaurios nos ayudará a ser «conscientes del hecho histórico de la vida, de nuestra compleja herencia de sucesos y de su aportación al conocimiento del devenir de este planeta, del que somos una pequeña parte en el presente, pero del que somos consecuencia plena del pasado ».
