Blood Groups and Human Heredity, 1900-1950 William H. Schneider, 2024-11-29 This monograph presents a detailed analysis of the beginning and rapid establishment of blood group research in the first half of the twentieth century. The main theme of this book is how blood groups were used as a scientific explanation of differences in race, health, and human behaviour. The discovery of the inheritance of blood groups, and their uneven distribution among various human populations quickly developed into a new field of scientific study in various countries around the world. Almost as quickly, the discoveries were studied as genetic markers of race, disease, and behaviours such as crime, insanity, and temperament. The time scope of coverage is the first half of the twentieth century, beginning with Landsteiner's discovery of blood groups and ending with the period following the Second World War when the research was picked up again and became part of the revolution in human genetics accelerated by the discovery of the double helix. By this time, blood group genetics had undermined the very concept of race and became the foundation of population genetics. The focus on the formative period of blood group research complements the recent resurgence of interest in the subject by providing in- depth background and a base for further research.

Blood Ties: Beyond Race Abdisa Kalbesa, 2024-03-15 Blood, the life force that pulses through our veins, serves as a powerful symbol of our shared humanity. It is a tangible reminder that beneath the surface, we are all connected by a common bond that transcends societal divisions. Regardless of our differences in wealth, power, or social status, our blood flows with the same life-giving vitality, indifferent to the external labels that seek to define us. In its purest form, blood knows no prejudice or bias. It does not discriminate based on race, gender, or background. It simply fulfills its essential purpose of nourishing and sustaining every individual with equal strength and determination. This unifying force of nature underscores the fundamental equality that exists among all human beings, reminding us that we are more alike than we are different. The universal nature of blood serves as a powerful metaphor for the interconnectedness of humanity. Just as our blood circulates throughout our bodies, carrying oxygen and nutrients to every cell, so too does our shared humanity bind us together in a web of mutual dependence and support. In times of crisis or need, it is this shared life force that unites us, inspiring acts of compassion, solidarity, and kindness that transcend the artificial barriers that divide us. Our blood is a powerful emblem of harmony, that goes beyond its mere medical significance. It signifies a shared bond that unites us all, regardless of race or ethnicity. Fundamentally, it is our shared blood that paves the way for a future where connections run deeper than the constraints of race. Our blood holds the key to our future—a future, where blood ties extend far beyond the realm of our respective race, and where the fallacies of racial disparities are finally laid to rest.

The Oxford Handbook of Group and Organizational Learning Linda Argote, John M. Levine, 2020-01-02 Groups and organizations vary dramatically in their ability to learn. Some acquire substantial knowledge as a function of experience, while others do not. In groups, learning can occur at the level of the individual member and/or the group as a whole. In organizations, learning can occur at both of these levels as well as that of the wider collective. Besides varying in the amount and kind of information they acquire, groups and organizations also vary regarding their success in retaining knowledge and transferring it to other units. In general, groups and organizations that are proficient in acquiring, retaining, and transferring knowledge are more productive and more enduring than their less able counterparts. The goal of this handbook is to bring together cutting-edge theoretical and empirical work on group and organizational learning by leading scholars from several disciplines. Because many of the same processes influence learning in groups and organizations, including both kinds of learning in the same volume has the potential to facilitate the integration of knowledge and the cross-fertilization of ideas. These benefits are reciprocal, in that research at the group level can shed light on how organizations learn whereas research at the organizational level can illuminate how groups learn. By clarifying similarities and differences in the processes that underlie learning in groups and organizations, the handbook advances understanding of the causes and consequences of learning in collectives of varying size and complexity.

Low-Carbohydrate Mania Richard Harding, 2017-01-26 Many popular books, magazines, and websites claim that we have been following expert medical advice for the past 40 years and we are unhealthier than ever. They declare that the idea that saturated fats and cholesterol cause heart disease is the greatest scientific deception of our times and that a low-carbohydrate, high-fat diet is essential for our well-being. These views have become accepted as the truth. Instead of informing our society about healthy dietary choices, they are causing widespread harm. Harding explains why these

prevailing views are based on myths, fabrications, and a distortion of the facts. However, standard medical advice has not been helpful in reducing the rising prevalence of obesity, diabetes, and autoimmune diseases. This advice often contains guidance such as everything in moderation and that we need to be practical and flexible. Advice that is not very constructive. Fortunately, the diets that are optimal for our health are also the best for the environment and for the animals we share the earth with.

Mapping Biology Knowledge K. Fisher, J.H. Wandersee, D.E. Moody, 2006-04-11 Mapping Biology Knowledge addresses two key topics in the context of biology, promoting meaningful learning and knowledge mapping as a strategy for achieving this goal. Meaning-making and meaning-building are examined from multiple perspectives throughout the book. In many biology courses, students become so mired in detail that they fail to grasp the big picture. Various strategies are proposed for helping instructors focus on the big picture, using the 'need to know' principle to decide the level of detail students must have in a given situation. The metacognitive tools described here serve as support systems for the mind, creating an arena in which learners can operate on ideas. They include concept maps, cluster maps, webs, semantic networks, and conceptual graphs. These tools, compared and contrasted in this book, are also useful for building and assessing students' content and cognitive skills. The expanding role of computers in mapping biology knowledge is also explored.

Breathing oxygen, free from Long Covid Harold Lee, 2024-10-15 Western medicine provides valuable insights into the anatomy of the human body and hormonal functions, Eastern medicine offers a different perspective. It focuses on the role of unseen forces such as viruses, lymph fluids, plasma, and oxygen, which often go unnoticed in laboratory tests. Oxygen, unlike glycogen, fluids, matrix, and sleep, does not accumulate debt in the body but is essential for optimal functioning. However, the Covid and chronic diseases have disrupted this vital function, leading to the breakdown of our natural building system. The Western version of Covid treatment mainly revolves around killing the virus, with little focus on the inner organ relationships. It prioritizes vaccines and treating symptoms rather than understanding the root cause of the disease. On the other hand, Eastern medicine examines why certain individuals are more susceptible to infections and focuses on optimizing damaged organs to create an environment where the virus cannot thrive. It utilizes treatments such as acupuncture, Japanese Tiny Moxibustion and herbal remedies Though scientific proof may be lacking, historical medical practices from traditions like Ayurvedic and TCM emphasize the importance of oxygen and air in the healing process. This book aims to provide insights into how our body system can effectively fight against the virus, regenerate the lymphatic system, and improve 5 organ health. It combines perspectives from both Western and Eastern medicine to give a comprehensive viewpoint. Additionally, it addresses the importance of the lymphatic system, the theory of invisible forces, the role of oxygen, and the treatment of chronic pain and undiagnosed diseases using Eastern medicine. the book highlights the significance of the 5-organ energy balance, linking it to one's genetic makeup and overall health.

Stereotypes and the Construction of the Social World Perry R. Hinton, 2019-10-16 Stereotypes and the Construction of the Social World explores the complexity of stereotypes, guiding the reader through issues of definition and theoretical explanations from psychology and other disciplines. The book examines why people use stereotypes, which have often been represented as inaccurate, rigid and discriminatory. If that is what they are, then why would people employ such 'faulty' or 'biased' views of others? Whilst this book presents a detailed and comprehensive analysis of the psychological research into the individual use of stereotypes, it also presents this research within its ideological and historical context, revealing the important sociocultural factors in what we mean by 'stereotypes'. From the politics of representation and inter-group power

relations, alongside individual social cognitive issues, the book provides a comprehensive and cross-disciplinary account of stereotypes and stereotyping. Featuring a wealth of real-world examples, it will be essential reading for all students and researchers of stereotypes.
