Psychological Testing George Domino, Marla L. Domino, 2006-04-24 This book is an introductory text to the field of psychological testing primarily suitable for undergraduate students in psychology, education, business, and related fields. This book will also be of interest to graduate students who have not had a prior exposure to psychological testing and to professionals such as lawyers who need to consult a useful source. Psychological Testing is clearly written, well-organized, comprehensive, and replete with illustrative materials. In addition to the basic topics, the text covers in detail topics that are often neglected by other texts such as cross-cultural testing, the issue of faking tests, the impact of computers and the use of tests to assess positive behaviors such as creativity.

Dynamic Testing Robert J. Sternberg, Elena L. Grigorenko, 2002 The goal of this book is to present and evaluate the concept of dynamic testing. Unlike 'static' tests such as the SAT or IQ tests, dynamic testing emphasizes learning potential rather than past learning accomplishments. The book opens with a theoretical framework of abilities as forms of developing expertise. It then continues with an introduction to dynamic testing and then a capsule history of dynamic testing. The book also reviews the approaches of Feuerstein and Budoff and other diverse approaches to dynamic testing. The Drs Sternberg and Grigorenko present their own three-prong approach to dynamic testing along with two case studies using dynamic testing in their own research. The authors conclude that dynamic testing has enormous potential which has not yet been tapped.

Interactive Assessment H. Carl Haywood, David Tzuriel, 2013-11-11 The terms interactive and dynamic would never have been associated with psychological and psychoeducational assessment a generation ago. They have currency now because of widespread dissatisfaction with the normative, standardized testing model, criticism of theoretical concepts of intelligence, recognition of abuses of standardized intelligence testing, and frustration with prediction and classification as primary goals of assessment. It is almost certainly true that public policy concerns propel scientific activity far more often than science propels public policy! In the case of psychological assessment, public policy concerns have arisen in the last 20 years primarily around issues of possible discrimination against members of ethnic minorities. At the same time, there has been a resurgence of dedication to excellence in education goals. These concerns have led to such extreme measures as prohibition of the use of standardized intelligence tests to determine school placement decisions, especially for minority children. They have led also to a search for alternatives to standardized, normative testing. The chapters in this volume represent a variety of answers to this need.

Basic and Applied Memory Research Douglas J. Herrmann, Chris Hertzog, Cathy McEvoy, Paula Hertel, Marcia K. Johnson, 2013-11-19 Basic researchers unlock the secrets of nature; applied researchers unlock the means by which those secrets of nature can change people's lives. Neither basic nor applied research has an independent impact. These volumes examine the convergence of basic and applied research in the field of memory. Volume 1: Theory and Context, focuses on the methods for understanding and applying basic memory theory, while Volume 2: Practical Applications, expands the understanding of practical memory research by providing in-depth research examples and findings. If the science of memory

is to make a significant contribution to society, coordinating our basic and applied efforts and determining how they complement each other become of paramount importance. These volumes will help in this regard--both as textbooks demonstrating how to investigate memory and apply basic memory theory, and as reference sources leading to a better understanding of certain problems in basic and applied memory research. Readers of these volumes will gain a thorough grasp of the way major themes relate to basic and applied research collaboration, how programmatic basic and applied research can be conducted on particular memory problems, and the manner in which basic and applied work in major problem areas has been incorporated into the field of memory. Both volumes present important information that will be indispensable to researchers and students alike.

Computational Approaches to Analogical Reasoning: Current Trends Henri Prade, Gilles Richard, 2014-03-22

Analogical reasoning is known as a powerful mode for drawing plausible conclusions and solving problems. It has been the topic of a huge number of works by philosophers, anthropologists, linguists, psychologists, and computer scientists. As such, it has been early studied in artificial intelligence, with a particular renewal of interest in the last decade. The present volume provides a structured view of current research trends on computational approaches to analogical reasoning. It starts with an overview of the field, with an extensive bibliography. The 14 collected contributions cover a large scope of issues. First, the use of analogical proportions and analogies is explained and discussed in various natural language processing problems, as well as in automated deduction. Then, different formal frameworks for handling analogies are presented, dealing with case-based reasoning, heuristic-driven theory projection, commonsense reasoning about incomplete rule bases, logical proportions induced by similarity and dissimilarity indicators, and analogical proportions in lattice structures. Lastly, the volume reports case studies and discussions about the use of similarity judgments and the process of analogy making, at work in IQ tests, creativity or other cognitive tasks. This volume gathers fully revised and expanded versions of papers presented at an international workshop, as well as invited contributions. All chapters have benefited of a thorough peer review process.

Cognitive Development and the Ageing Process Patrick Rabbitt, 2019-05-21 In the World Library of Psychologists series, international experts present career-long collections of what they judge to be their most interesting publications - extracts from books, key articles, research findings, practical and theoretical contributions. Professor Patrick Rabbitt has been a prominent contributor to knowledge of cognitive performance and cognitive ageing for over half a century. He has made a range of significant contributions to gerontological research, from the development of information processing theories in the 1950s and 1960s to a new understanding of decision making and the ageing process in subsequent decades.

This collection of his research articles represents a review of how work in cognitive performance and cognitive ageing has developed in the past 50 years. Whilst the nature of scientific research means that some of the questions posed have since been answered, Rabbitt adds introductory sections to articles which contextualise its place in the subject area and offer a personal view on the evolution of the field. This book is important because it provides a perspective on the development of cognitive research and the ageing process through the work of an active researcher in the field. It will interest all students and researchers interested in cognitive development and gerontology.

The Effectiveness of Rehabilitation for Cognitive Deficits Peter W. Halligan, Derick T. Wade, 2005 In this book, some of the leading clinicians and cognitive neuroscientists consider the effectiveness of cognitive rehabilitation. They situate the issues within an overall context that considers the different types and levels of diagnosis and assessment, the adequacy of underlying cognitive theory for rehabilitation, and more importantly, the clinical effectiveness of current treatments to improve functional recovery. By employing an evidence-based approach that critically evaluates the published literature, the book provides for a better understanding of the strengths and limitations of the cognitive approach and hopefully a more realistic expectation of its outcome for patients with neurological deficits. The book will serve as a valuable source for a wide spectrum of professionals who deal with the neuropsychological and neurological effects of brain damage.--BOOK JACKET.
