Análisis y diseño de sistemas Kenneth E. Kendall, Julie E. Kendall, 2005

Desarrollo de Sistemas de Información una Metodología Basada en el Modelado Vicenç Fernández

Alarcón, 2010-03 El objetivo de este libro es exponer, de forma práctica, el proceso de desarrollo de un sistema de información centrándose en el análisis de las necesidades de una empresa o negocio y en el diseño lógico de un sistema de información que satisfaga estos requisitos, pero sin olvidar las demás etapas en su desarrollo. Para ello, el libro se estructura en tres módulos. El primer módulo introduce qué es un sistema de información, así como otros elementos importantes para su comprensión. El segundo bloque expone, de forma detallada, las etapas y las fases que forman el ciclo de vida de un sistema de información: planificación, análisis, diseño, implantación y soporte de sistemas. Por último, el tercer bloque presenta tres técnicas: el modelado de casos de uso, el modelado de datos y el modelado de procesos, para el desarrollo de sistemas de información a través de varios ejemplos. El libro también ofrece un conjunto de ejercicios y problemas sobre el desarrollo de sistemas de información, un glosario con los términos más importantes y una extensa bibliografía, que ayudarán al lector en su proceso de aprendizaje.

Sistemas de Información Medioambiental José Manuel Cotos Yáñez, José Ángel Taboada González, 2003-09 La grave degradación del medioambiente que la acción del hombre ha provocado en el último siglo ha despertado en las sociedades más avanzadas la preocupación por su conservación. Además, la facilidad con la que errores humanos o acciones deliberadas provocan catástrofes ha exigido su vigilancia. Tratamos en este libro la aportación de las Tecnologías de la Información (TI) a la conservación y protección del medioambiente dividiéndolo en dos partes claramente diferenciadas. La primera parte del libro introduce al lector en la teoría de las tecnologías utilizadas. La distribución espacial de la información utilizada justifica el uso extensivo de los Sistemas de Información Geográfica que añaden a los Sistemas de Información clásicos, soportados por las Bases de Datos, la necesaria gestión espacial. Asimismo, el volumen de información normalmente manejada hace necesario su análisis automático a través de novedosas técnicas introducidas en los dos últimos capítulos de esta primera parte. Ya en la segunda parte del libro se presentan al lector un conjunto de aplicaciones funcionando en la actualidad, que muestran el uso práctico de estas tecnologías. Entre ellas cabe destacar el Sistema de Información Ambiental puesto en marcha por la Xunta de Galicia, la clasificación de usos del suelo a partir de datos in situ e imágenes de satélite desarrollada

por el SITGA, ambos claros ejemplos del manejo de datos espacialmente distribuidos. Otras aplicaciones atienden además a la gestión en tiempo real de los datos como el sistema de Gestión de Medios Aéreos Contraincendios, la gestión de residuos sólidos urbanos o el control energético.

Organización y transformación de los sistemas de información en la empresa Carmen de Pablos Heredero, José Joaquín López Hermoso Agius, Santiago Martín-Romo Romero, Sonia Medina Salgado, 2019-02-28

Organización y transformación de los sistemas de información en la empresa recoge los aspectos de gestión que las organizaciones deben de considerar desde que identifican las necesidades de incorporación de tecnologías de información y comunicación en sus procesos de negocio, hasta que tratan de medir los resultados que han obtenido en sus sistemas de información. Constituye el presente trabajo una herramienta de ayuda para aquellos que presentan cierto interés en conocer de forma completa posibilidades de gestión de las tecnologías de información y sistemas de información en la empresa. El equipo de profesores y profesionales que han intervenido en este trabajo ha puesto una especial atención en destacar el papel esencial y posibilitador que desde la perspectiva organizativa tienen las tecnologías de información y comunicación en la empresa. La madurez y experiencia del equipo tanto en docencia, investigación como en la gestión de tecnología en las organizaciones enriquecen desde una perspectiva multidimensional el trabajo. El trabajo se compone de ocho capítulos. En el primer capítulo se ponen de manifiesto algunos aspectos esenciales relacionados con el concepto de sistema de información. En el segundo capítulo se profundiza sobre el papel estratégico que tienen las tecnologías de la información y de las comunicaciones. En el tercer capítulo se destaca la complementariedad de las TIC y los recursos humanos asociados a ellos a la hora de generar capacidades en las organizaciones. El cuarto capítulo muestra herramientas que facilitan que un proyecto de desarrollo e implantación de sistemas de información, interno o externalizado, esté bien planificado y dimensionado en costes y beneficios para asegurar calidad, flexibilidad, orientación al negocio y al usuario y fiabilidad. En el quinto capítulo se destaca la relevancia de la transformación digital para las organizaciones y se pone énfasis en la gestión del cambio empresarial para que las organizaciones consigan resultados acordes con las posibilidades de las tecnologías de información y comunicación y las expectativas de los clientes. El sexto capítulo describe y ofrece estrategias de gestión y organización del trabajo y de sistemas de información compartidos que funcionan actualmente gracias a un uso inteligente de TIC. En el séptimo capítulo se definen algunos conceptos utilizados en la seguridad de los SI y se referencian las implicaciones económicas de la gestión de la seguridad, la legislación y su aplicación. Por último, en el octavo capítulo se proponen metodologías que sirvan de orientación para realizar auditorías de sistemas de información.

Calidad de Sistemas de Información. 4ª edición ampliada y actualizada Mario G. Piattini Velthuis, En la actualidad, todas las organizaciones son en alguna manera “empresas de software”, ya que la calidad de sus sistemas de información se ha convertido en uno de sus principales objetivos estratégicos y, más que nunca, su propia supervivencia depende de la calidad de los productos y servicios informáticos. La industria del software tiene casi setenta años y en este período ha realizado grandes avances, ya que disponemos de lenguajes de programación más sofisticados, procesos de desarrollo más maduros, y las aplicaciones que se construyen en la actualidad son más complejas. Sin embargo, la demanda de software por parte de la sociedad ha crecido más deprisa que la capacidad de la industria para producir software de calidad; y, de hecho, la mala calidad de los sistemas informáticos ha costado mucho dinero y disgustos a los gobiernos y a las empresas. La calidad de los Sistemas de Información viene condicionada por la calidad de las personas que crean, desarrollan, y los explotan; la calidad de los proyectos que se utilizan para crear los sistemas, los servicios y soportar los procesos de negocio; y la calidad de los sistemas informáticos que, a su vez, dependerá en buena parte de la calidad del software (tanto de los procesos usados para su adquisición, diseño, implementación, uso y mantenimiento; como de los productos resultantes). La presente obra reúne diferentes aspectos de calidad relacionados con estos distintos elementos, ofreciendo una panorámica actual y completa sobre diversos modelos y estándares que se deben seguir para lograr sistemas de información de calidad, combinando el rigor científico con la experiencia práctica.
