Cardiac Tumor Pathology Cristina Basso, Marialuisa Valente, Gaetano Thiene, 2012-11-28 Cardiac tumors were once a nosographic entity of scarce clinical interest because of the rarity and of the intrinsic diagnostic and therapeutic impossibilities, and were considered a fatal morbid entity. It has now become a topical subject due to advances in clinical imaging (echo, magnetic resonance, computed tomography) as well as innovation in technologies of in-vivo diagnosis. Cardiac Tumor Pathology presents a spectacular example of these advances with clinico-pathologic correlations. This timely volume covers history, epidemiology, demographics, clinical diagnosis, pathology, imaging by echo, CT and MRI of both benign and malignant cardiac tumors, either primary or secondary. Chemotherapy of malignant neoplasms is also addressed. Special emphasis is given to clinico-pathologic correlations. With all chapters written by experts in their fields, this volume will serve as a useful resource for physicians dealing with, and interested in, this special branch of cardiac oncology and will represent a useful guide for pathologists, clinicians, cardiologists, cardiac surgeons, and radiologists as well as for postgraduate students training in these areas.

The book attempts to present the material from the perspective of the autopsy table. It uses the clinical data as the initial framework and the autopsy findings to develop a true understanding of the disease and the associated pathophysiology of the condition with final clinico-pathological correlation. Each case covers a complete journey of the deceased patient concisely under the following headings—title, clinical history, autopsy findings and discussion, which includes a brief review of the literature. The text is accompanied by relevant high-quality macroscopic and microscopic images. The book is relevant for specialists in pathology, cardiology, cardiac surgery, internal medicine, critical care and pediatrics

Manual of Cardio-oncology Chiara Lestuzzi, Stefano Oliva, Francesco Ferrà, 2017-10-13 This concise and handy manual provides straightforward, up-to-date guidance for cardiologists and other practitioners on the management of cancer patients with cardiac problems, whether they be due to the cancer itself or to antineoplastic treatment. Detailed attention is devoted to the various forms of cardiotoxicity associated with chemotherapy and radiotherapy. The drugs commonly responsible for each toxicity are identified and clear advice is offered on monitoring techniques and treatment approaches. In addition, the issue of cardiotoxicity due to cancer treatment in particular patient groups - children, the elderly, and those with pre-existing cardiac disease - is addressed separately, with guidance on when and how antineoplastic (and/or cardiological) treatments should be modified. Further sections describe the correct responses to cardiac problems secondary to the cancer itself, including thromboembolic disorders and electrolyte imbalances, and the diagnosis, treatment, and follow-up of cardiac tumors. A closing section considers how to improve cooperation between oncologists, cardiologists, and general practitioners to ensure that cancer patients' cardiovascular needs are met in a multidisciplinary approach.
