Robert Boland, Marcia L. Verduin

Assessing, Diagnosing, and Treating Serious Mental Disorders Edward H. Taylor, 2014-10-21 Assessing, Diagnosing, and Treating Serious Mental Disorders uniquely provides information that is useful across mental health, psychopathology, practice, and human behavior and development classes, particularly for psychopathology and advanced mental health practice courses. DSM-IV-TR diagnostic criteria is provided for each mental disorder discussed in the textbook, and detailed comparisons to DSM-5 are included. This book represents a new wave of social work education, focusing on mental disorders as an interaction among neurobiology, genetics, and ecological social systems. Edward Taylor argues that most all mental disorders have a foundation within the person's brain that differentially interacts with the social environment. Therefore, how the brain is involved in mental disorders is covered far more comprehensively than found in most social work textbooks. However, the purpose is not to turn social workers into neuroscientists, but to prepare them for educating, supporting, and where appropriate providing treatment for, clients and families facing mental illness. Entire chapters are dedicated to explaining bioecological and other related theories, family support and intervention, and assessment methods. To help students conceptualize methods, the book includes specific steps for assessing needs, joining, and including families in mental health treatment decisions. Methods for helping families become part of the treatment team and for providing in-home interventions are highlighted. Throughout the book, professors and students can find helpful outlines and illustrations for how to understand, assess, and treat mental disorders.

Schulze, 2024-09-04 Authored by over 500 internationally acclaimed expert editors and chapter authors from around the world. Completely updated and expanded with almost 40 new chapters. Earlier editions were called “the best current textbook of psychiatry” by the New England Journal of Medicine, and “the gold standard” by

the American Journal of Psychiatry. Tasman's Psychiatry, 5th Edition, builds on the initial vision in prior editions of approaching psychiatric evaluation and care from an integrative bio-psycho-social-cultural perspective. It is designed to be an essential and accessible reference for readers at any level of experience. This editorial approach encompasses the importance of the first encounter between patient and clinician, followed by the complex task of beginning to develop a therapeutic relationship and to develop and implement a treatment plan in collaboration with the patient. The importance of increasing attention to the role of culture and social determinants of mental health is reflected both in specific chapters and in components of many chapters throughout the book, especially in those pertaining to clinical evaluation, the therapeutic alliance, and treatment. The global scope of this edition is reflected throughout the book, including the section on psychiatric disorders where evaluation using both ICD 11 and DSM 5-TR is discussed. Most chapters are authored by experts from at least two different countries or continents, adding a critically important dimension which often is missing in major psychiatric textbooks. Tasman's Psychiatry, 5th Edition, is an essential reference for all medical professionals and students who need a trusted reference or learning tool for psychiatry, psychology, clinical research, social work, counseling, therapy, and all others.

The American Psychiatric Association Publishing Textbook of Anxiety, Trauma, and OCD-Related Disorders Naomi Simon,Eric Hollander,Barbara O. Rothbaum,Dan J. Stein,2020-04-02 Designed for clinicians at every level, The American Psychiatric Association Publishing Textbook of Anxiety, Trauma, and OCD-Related Disorders addresses the origin, assessment, diagnosis, and treatment of these disorders in a comprehensive, up-to-date, and compelling manner. Fresh voices are everywhere in this authoritative revision of the classic text, as more than 60% of the contributors are new. They join stalwarts from the previous edition -- experts who bring stellar credentials and a discerning eye to the task of revising the text to reflect cutting-edge scholarship and evidence-based clinical knowledge. Following a comprehensive overview of

core principles, the book provides detailed coverage of specific DSM-5 diagnoses: generalized anxiety disorder, obsessive-compulsive and related disorders, panic disorder and agoraphobia, social anxiety disorder, specific phobia, and trauma- and stressor-related disorders. Each section presents the latest thinking on phenomenology and pathogenesis, then provides evidence-based clinical recommendations for pharmacotherapy and psychotherapy. New and noteworthy material includes the following: Two new chapters focus on the features, phenomenology, and course of acute and integrated grief, as well as the epidemiology, clinical features, evaluation, and pathophysiology of complicated grief (CG), which affects a significant minority. Proper treatment of CG is critical, because once it persists beyond 6 months, impairment may last for years, if not a lifetime. Accordingly, a separate chapter is devoted to treatment options, including a hybrid of cognitive-behavioral, interpersonal, motivational interviewing, and psychodynamic methods. The Unified Protocol (UP) for Transdiagnostic Treatment of Emotional Disorders is examined in a fascinating new chapter. The UP is a promising treatment with empirical support for reduction of both symptoms and higher-order temperamental changes, such as changes in neuroticism, an underlying mechanism associated with onset and maintenance of emotional disorders. The chapter on anxiety disorders in late life is completely new and emphasizes the prevalence of anxiety in this population and its likelihood of remaining undetected and untreated. The epidemiology, diagnosis, and treatment of these disorders are examined in detail so that the reader will recognize the clinical features, be able to differentiate them from depression, and can identify appropriate treatment, whether pharmacological or psychotherapeutic. Each chapter features a concise list of key clinical points to help the reader focus on the most important material for study, as well as a list of recommended reading for those who wish to learn more. Grounded in the latest research, clinically rich, and pedagogically strong, *The American Psychiatric Association Publishing Textbook of Anxiety, Trauma, and OCD-Related Disorders* is the go-to text for mental health clinicians looking for evidence-based knowledge and support.

Anxiety Disorders Yong-Ku Kim, 2020-01-30 This book reviews all important aspects of anxiety disorders with the aim of shedding new light on these disorders through combined understanding of traditional and novel paradigms. The book is divided into five sections, the first of which reinterprets anxiety from a network science perspective, examining the altered topological properties of brain networks in anxiety disorders. The second section discusses recent advances in understanding of the neurobiology of anxiety disorders, covering, for example, gene-environmental interactions and the roles of neurotransmitter systems and the oxytocin system. A wide range of diagnostic and clinical issues in anxiety disorders are then addressed, before turning attention to contemporary treatment approaches in the context of novel bio-psychosocial-behavioral models, including bio- and neurofeedback, cognitive behavioral therapy, neurostimulation, virtual reality exposure therapy, pharmacological interventions, psychodynamic therapy, and CAM options. The final section is devoted to precision psychiatry in anxiety disorders, an increasingly important area as we move toward personalized treatment. Anxiety Disorders will be of interest for all researchers and clinicians in the field.
