21st Century Homestead: Nitrogen-Fixing Crops Stanley Bilello, 2016-10-10 21st Century Homestead: Nitrogen-Fixing Crops contains everything you need to stay up to date on nitrogen-fixing crops for your sustainable farm or garden.

Manual of Romance Sociolinguistics Wendy Ayres-Bennett, Janice Carruthers, 2018-06-11 The Romance languages offer a particularly fertile ground for the exploration of the relationship between language and society in different social contexts and communities. Focusing on a wide range of Romance languages – from national languages to minoritised varieties – this volume explores questions concerning linguistic diversity and multilingualism, language contact, medium and genre, variation and change. It will interest researchers and policy-makers alike.

How to live and survive in Zambezian open forest (Miombo ecoregion) Françoise Malaisse, 2010 In the Miombo ecoregion (2,865,000 km² or 9.1% of Africa), the Zambezian open forest constitutes the main vegetation unit. It extends to no less than eight countries, from Burundi in the North to South Africa in the South, and from Angola in the West to Mozambique in the East. The austral part of Africa's open forests falls within the Zambezian Regional Center of Endemism outlined by White in 1983. This book focuses mainly on the wetter Zambezian Miombo woodlands. Also patches of mosaic Zambezian dry evergreen forests and small areas of grasslands on Kalahari sands are incorporated in the study. The aim of this book is to gather together the amazing local environment knowledge of Zambezian open forests peoples in order to permit an easier improvement of their well-being. This research has been developed in an ethnoecological way of thinking. Indeed, the synergy arising from putting together local knowledge and updated ecological research provides huge information on ecosystem management, including biodiversity aspects. Ethnoecology is an emergent field that focuses on local peoples' perception and management of complex and co-evolved relationships between the cultural, ecological, and economic components of anthropogenic and natural ecosystems. In the present book, the Zambezian wild edible products are treated according to fourteen items (from fungi, plants and honey, to beverages and salt, through mammals, birds, fish, insects and other animals). Some other comments concern agriculture and ethnoecology. All together more than a thousand edible products are involved; their ecology, their phenology, as well as their nutritional values are presented and discussed. The iconography is supported by a CD with 387 color photographs. The earlier French version of 1997 has been reviewed and enlarged, taking into account recent progress of knowledge. An important bibliography is presented.

A Cultural History of Plants in the Nineteenth Century David Mabberley, 2023-12-14 A Cultural History of Plants in the Nineteenth Century covers the period from 1800 to 1920, a time of astonishing growth in industrialization, urbanization, migration, population growth, colonial possessions, and developments in scientific knowledge. As European modes of civilization and cultivation were exported worldwide, botanical study was revolutionized – through the work of Charles Darwin and many others – and the new science of biology was born, based on cells, nuclei and molecules. As Darwinism took hold, plants came to be seen as a way of thinking about the connectivity of nature and life itself. The 6 volume set of the Cultural History of Plants presents the first comprehensive history of the uses and meanings of plants from prehistory to today. The themes covered in each volume are plants as staple foods; plants as luxury foods; trade and exploration; plant technology and science; plants and medicine; plants in culture; plants as natural ornaments; the representation of plants. David Mabberley is Emeritus Fellow at Wadham College, University of Oxford, UK; Emeritus Professor at the University of Leiden, The Netherlands; and Adjunct Professor at Macquarie University, Australia. Volume 5 in the Cultural History of Plants set. General Editors: Annette Giesecke, University of Delaware, USA, and David Mabberley, University of Oxford, UK.

Beta maritima Enrico Biancardi, Leonard W. Panella, J. Mitchell McGrath, 2019-11-27 This book, now in its second edition, provides researchers and operators a complete description of all aspects regarding the wild ancestor of sugar beet. The possibility of crossing modern crops with the ancestors from which they are derived in order to recover some traits lost through domestication is increasingly attracting interest. The selective process implemented by the first growers led to the elimination of features not considered useful at the time. Yet some of these lost traits have now become very important. In fact, in many areas sugar beet cultivation would now be impossible without the transfer of some genetic resistances from *Beta maritima*, the crop's ancestor. Moreover, the isolation of such traits is becoming increasingly critical with regard to current and future environmental and economic considerations on e.g. the use of pesticides. This second edition replaces certain photographs and has been updated to reflect the latest advances and findings. One chapter and several sections have been rewritten, and significant revisions have been made throughout the text. The new techniques provide breeders with massively improved analytical means for the safest and fastest selection procedures. Not only will these techniques allow *Beta maritima* to take on a far greater role as a source of favorable traits; the relative ease with which these characteristics can be transferred will also make it possible to use the germplasm of the whole genus *Beta* and *Patellifolia*, which to date has been highly complex, if not impossible, due to the difficulties of hybridization.

The Bioarchaeology of Ritual and Religion Alexandra Livarda, Richard Madgwick, Santiago Riera Mora, 2017-12-21 The Bioarchaeology of Ritual and Religion is the first volume dedicated to exploring ritual and religious practice in past

societies from a variety of 'environmental' remains. Building on recent debates surrounding, for instance, performance, materiality and the false dichotomy between ritualistic and secular behavior, this book investigates notions of ritual and religion through the lens of perishable material culture. Research centering on bioarchaeological evidence and drawing on methods from archaeological science has traditionally focused on functional questions surrounding environment and economy. However, recent years have seen an increased recognition of the under-exploited potential for scientific data to provide detailed information relating to ritual and religious practice. This volume explores the diverse roles of plant, animal, and other organic remains in ritual and religion, as foods, offerings, sensory or healing mediums, grave goods, and worked artifacts. It also provides insights into how archaeological science can shed light on the reconstruction of ritual processes and the framing of rituals. The 14 papers showcase current and new approaches in the investigation of bioarchaeological evidence for elucidating complex social issues and worldviews. The case studies are intentionally broad, encompassing a range of sub-disciplines of bioarchaeology including archaeobotany, anthracology, palynology, micromorphology, geoarchaeology, zooarchaeology (including avian and worked bone studies), archaeomalacology, and organic residue analysis. The temporal and geographical coverage is equally wide, extending across Europe from the Mediterranean and Aegean to the Baltic and North Atlantic regions, and from the Mesolithic to the medieval period. The volume also includes a discursive paper by Prof. Brian Hayden, who suggests a different interpretative framework of archaeological contexts and rituals.

Les coquillages de nos rivages Robert Le Neuthiec, 2013-09-05 Cet ouvrage est destiné aussi bien à l'amateur débutant qu'au spécialiste. Il permet de répondre à la question : « Comment s'appelle ce coquillage? ». Grâce aux clés d'identification, le lecteur pourra trouver le nom de l'animal récolté, en progressant pas à pas en fonction des particularités de chaque coquille. Les 400 photographies et 100 schémas originaux faciliteront sa recherche. Il s'agit ici des jolis coquillages (ni minuscules, ni rarissimes) que l'on trouve sur les côtes de France et des pays voisins baignés par la Manche, l'océan Atlantique et la mer Méditerranée.

Flore nordique du Québec et du Labrador 01 Serge Payette, 2013-12-20 T00:00:00-05:00 La FLORE NORDIQUE, une source d'information essentielle sur le patrimoine végétal du Québec-Labrador nordique. Cet ouvrage est le premier de quatre volumes consacrés à la Flore des plantes vasculaires des régions nordiques du Québec et du Labrador, du 54^e parallèle nord jusqu'au détroit d'Hudson, depuis la baie de James et la baie d'Hudson, à l'ouest, jusqu'à la mer du Labrador, à l'est. L'ouvrage est le fruit d'une collaboration de longue durée entre plusieurs botanistes du Québec. Il rassemble des connaissances et des données inédites sur les plantes nordiques des milieux boréaux, subarctiques et arctiques. Ce volume comprend des textes introductifs sur la géographie de la région, l'historique des herborisations et la biogéographie des taxons. On présente également une clé d'identification de toutes les familles de plantes poussant dans cette vaste région

nordique. Les caractéristiques morphologiques des taxons appartenant à 32 familles différentes sont décrites, allant des lycopodes aux joncs, en passant par les fougères, les conifères, les potamots et les orchidées. La description botanique de chaque taxon est accompagnée de photographies des plants et des organes présentant des caractères diagnostiques, d'une carte de répartition et d'un commentaire sur l'écologie et l'habitat de chacun d'eux. Voici un ouvrage qui servira de référence aux chercheurs et aux étudiants intéressés par les sciences naturelles, aux professionnels de l'environnement et au public averti qui s'intéressent au patrimoine végétal du Québec et du Labrador.

The Urban Garden City Sandrine Glatron, Laurence Granchamp, 2018-03-24 This book provides an interdisciplinary overview of the role of gardens in cities throughout different historical periods. It shows that, thanks to various forms of spatial and social organisation, gardens are part of the material urban landscape, biodiversity, symbolic and social shape, and assets of our cities, and are increasingly becoming valued as an 'order' to follow. Gardens have long been part of the development of cities, serving different purposes through the ages: shaping neighborhoods to promote health or hygiene, introducing aesthetic or biological elements, gathering the citizens around a social purpose, and providing food and diversity in times of crisis. Highlighting examples that can serve as the basis for comparisons, the chapters offer a brief panorama of experiences and models of gardens in the city - in the European context and in various periods of history - while also discussing issues related to garden cities, urban agriculture and community gardens. The contributors are university staff from various disciplines in the human and life sciences, in discourse with other academics but also with practitioners who are interested in experiences with urban gardens and in promoting an awareness of their spatial, social and 'philosophical' goals throughout history. The book will appeal to urban geographers, sociologists and historians, but also to urban ecologists dealing with ecosystem services, biodiversity and sustainable development in cities. From a more operational standpoint, landscape planners and architects are sure to find many of the projects enlightening and inspirational.

Bamboo in Vietnam Đinh Trọng Hiếu, Emmanuel Poisson, 2023-10-13 This book presents interdisciplinary research on bamboo in Vietnam, drawing on the anthropology of gesture, ethnobotany and the history of technology. The authors have adopted a technological approach which reviews how the terminology of different parts of the bamboo plant in the dictionaries in Romanized Vietnamese or in Vietnamese vernacular writing (nôm) enabled the authors to identify not only the plant but also each technical gesture for its appropriation by the artisan. Lithographic, literary and historical sources from the chronicles have been mobilized to illustrate the many uses of this versatile plant. Richly illustrated throughout, this book will appeal to students and scholars of Vietnam, anthropology, the history of science and technology, environmental history and architecture. It will also be of great value to those interested in the applications of bamboo in the contemporary world.

Quand la planète n'aura plus rien à se mettre Bérengère Weiss, 2022-09-09T00:00:00+02:00 Tout comprendre de

l'impact de la mode sur notre environnement et notre quotidien S'habiller a d'abord été une nécessité chez nos ancêtres préhistoriques. Puis, rapidement au fil des siècles, le choix de l'habit est devenu symbolique. Mais depuis quelque temps, n'a-t-on pas dépassé la mesure du raisonnable, en hissant l'industrie de la mode au deuxième rang des plus gros pollueurs au monde ? En exploitant sans considération les petites mains des usines de confection ? En remplissant armoires et dressing compulsivement ? Fast-fashion, fièvre acheteuse, surconsommation, fibres synthétiques, greenwashing, exploitation ouvrière, mode patriarcale, culte du corps : cet ouvrage dénonce l'industrie de la mode, son impact néfaste sur la planète et sa manière de régir la société. Il fait prendre conscience du pouvoir que les grandes marques ont sur nous. Mais il propose également des conseils pour agir simplement au quotidien sans pour autant nous culpabiliser. Alors qu'elle était encore étudiante, Bérengère Weiss a travaillé dans une grande enseigne de mode à Paris. Elle y a vu en quelle quantité les vêtements pouvaient y être consommés. Devenue documentaliste et passionnée de recherche d'information, elle s'est naturellement tournée vers ce sujet de société qu'est la surconsommation vestimentaire. Quand la planète n'aura plus rien à se mettre est son premier ouvrage.

La biodiversité : avec ou sans l'homme ? Christian Lévêque, 2017-07-06 Contrairement à certaines idées reçues, l'homme n'a pas détruit la diversité biologique en métropole, mais il l'a transformée et enrichie. La déforestation, l'agriculture, les aménagements des cours d'eau et des zones humides, les introductions d'espèces ont créé des milieux artificialisés, gérés pour nos usages variés. Jusqu'à quel point pouvons-nous maîtriser les dynamiques de cette nature, soumise à différentes contraintes telles que de nouvelles pratiques agricoles, l'urbanisation, le réchauffement climatique ? La biodiversité ne relève-t-elle pas autant de l'attente des citoyens que de l'écologie scientifique ?

A revised correlation of Tertiary rocks in the British Isles and adjacent areas of NW Europe C. King, 2016-01-05 This Special Report comprehensively describes the stratigraphy and correlation of the Tertiary (Paleogene-Neogene) rocks of NW Europe and the adjacent Atlantic Ocean and is the summation of fifty years of research on Tertiary sediments by Chris King. His book is essential reading for all geologists who deal with Tertiary rocks across NW Europe, including those in the petroleum industry and geotechnical services as well as academic stratigraphers and palaeontologists. Introductory sections on chronostratigraphy, biostratigraphy and other methods of dating and correlation are followed by a regional summary of Tertiary sedimentary basins and their framework and an introduction to Tertiary igneous rocks. The third and largest

segment comprises the regional stratigraphic summaries. Regions covered are the North Sea Basin, onshore areas of southern England and the eastern English Channel area, the North Atlantic margins (including non-marine basins in the Irish Sea and elsewhere) and the Paleogene igneous rocks of Scotland.
