*Body Image, Eating Disorders, and Obesity in Youth* J. Kevin Thompson, Linda Smolak, 2001 Examines the relationship between body image disturbances and eating disorders in our most vulnerable population: children and adolescents. The editors present a dynamic approach that combines current research, assessment techniques, and suggestions for treatment and prevention. This volume delivers direction for researchers in the field as well as guidance for practitioners and clinicians working with young clients suffering from these disorders.

Flow and Image Cytometry Alain Jaquemin-Sablon, 2013-06-29 Image analysis and flow cytometry are complementary techniques which provide new insights into essential aspects of cell biology. This book presents an up-to-date overview of current ideas and methods in these domains. It consists of three parts. Part I, Membrane Dynamics and Function, deals with adhesion molecules, membrane pump dynamics, membrane fusion and endocytosis, membrane potential, T-cell homing and cytoskeleton, etc. The second part focuses on problems of cell proliferation, chromosome analysis and sorting, apoptosis, imaging cytometry of fixed and living cells, image analysis for gene mapping from flow-sorted chromosomes, chromatin organization, and liposome-mediated delivery of DNA binding drugs. The third part covers data management systems, cell sorting techniques and microscopy.

**The SAGE Handbook of Developmental Disorders** Patricia Howlin, Tony Charman, Mohammad Ghaziuddin, 2011-01-31 Over the last four decades, breakthroughs in genetic knowledge, together with the emergence of disciplines devoted to the scientific study of developmental disorders have resulted in much greater awareness of the many different behavioural and genetic phenotypes involved. It is now evident that not only do different disorders have different causes and different manifestations, but different neurological and biochemical bases, different responses to intervention, and different life courses. Reflecting the enormous changes that have taken place in our knowledge and understanding of developmental disorders, this groundbreaking international volume brings this vast and complex field together for the first time. The Editors have collected together the world's leading academic scholars and clinicians, to explore how current research across a range of different disciplines can inform clinical practice and help to improve the lives of individuals and their families.

**The Encyclopedia of Neuropsychological Disorders** Chad A. Noggle, Raymond S. Dean, Arthur MacNeill Horton, 2012 Print+CourseSmart

Cognitive and Behavioral Abnormalities of Pediatric Diseases Ruth Nass, MD, Yitzchak Frank, MD, 2010-04-12 This book provides a detailed account of intellectual, other neuropsychological and behavioral manifestations of general pediatric diseases. The conditions discussed include the whole range of pediatric diseases - genetic syndromes, other congenital conditions, metabolic, endocrine, gastrointestinal, infectious, immunologic, toxic, trauma, and neoplastic, as well as sensory disabilities including deafness and blindness. Although the book is not intended to discuss cognitive and behavioral manifestations of conditions usually considered to be primary neurological disease, some of those, including cerebral palsy, muscular dystrophy, myotonic dystrophy and epilepsy, are included. Where possible, a translational approach is used, linking the behavioral and cognitive manifestations of these conditions, to the underlying structural, chemical or genetic abnormalities and their effect on the brain, and, in turn, on behavior and cognition. At the same time, included are significant psychosocial factors. Together, those factors have a major effect on patients' performance, including school performance, and on their families. This book is unique in its extensive coverage of the major pediatric conditions and of the detailed neurological, neuropsychological and behavioral aspects of each condition.

*The Oxford Handbook of Intellectual Disability and Development* Jacob A. Burack, 2012 We know considerably more about persons with intellectual disability than we did even a decade ago. Seeking to improve and increase upon this knowledge, this book provides a map to continue sophisticated and precise research, to inspire professionals involved with intellectual disability, and to better the lives of persons affected by it.

**Fetal Subjects, Feminist Positions** Lynn M. Morgan, Meredith Wilson Michaels, 2016-11-11 Selected as the Most Enduring Edited Collection by the Council on Anthropology and Reproduction Since Roe v. Wade, there has been increasing public interest in fetuses, in part as a result of effective antiabortion propaganda and in part as a result of developments in medicine and technology. While feminists have begun to take note of the proliferation of fetal images in various media, such as medical journals, magazines, and motion pictures, few have openly addressed the problems that the emergence of the fetal subject poses for feminism. *Fetal Subjects, Feminist Positions* foregrounds feminism's effort to focus on the importance of women's reproductive agency, and at the same time acknowledges the increasing significance of fetal subjects in public discourse and private experience. Essays address the public fascination with the fetal subject and its implications for abortion discourse and feminist commitment to reproductive rights in the United States. Contributors include scholars from fields as diverse as anthropology, communications, political science, sociology, and philosophy.

Developmental Psychopathology, Maladaptation and Psychopathology Dante Cicchetti, 2016-02-01 A comprehensive reference on external contributing factors in psychopathology Developmental Psychopathology is a four-volume compendium of the most complete and current research on every aspect of the field. Volume Three: Risk, Disorder, and Adaptation explores the everyday effects and behaviors of those with behavioral, mental, or neurological disorders, and the disorder's real-world impact on their well-being. Now in its third edition, this comprehensive reference has been fully updated to better reflect the current state of the field, and detail the latest findings in causation, intervention, contextual factors, and the risks associated with atypical development. Contributions from expert researchers and clinicians explore the effects of abuse and traumatic stress, memory development, emotion regulation, impulsivity, and more, with chapters specifically targeted toward autism, schizophrenia, narcissism, antisocial behavior, bipolar disorder, and borderline personality disorder. Advances in developmental psychopathology have burgeoned since the 2006 publication of the second edition, and keeping up on the latest findings in multiple avenues of investigation can be burdensome to the busy professional. This series solves the problem by collecting the information into one place, with a logical organization designed for easy reference. Learn how childhood experiences contribute to psychopathology Explore the relationship between atypical development and substance abuse Consider the impact or absence of other developmental traits Understand the full risk potential of any behavioral or mental disorder The complexity of a field as diverse as developmental psychopathology deepens with each emerging theory, especially with consideration of the multiple external factors that have major effects on a person's mental and emotional development. Developmental Psychopathology Volume Three: Risk, Disorder, and Adaptation compiles the latest information into a cohesive, broad-reaching reference with the most recent findings.

**Handbook of Categorization in Cognitive Science** Henri Cohen, Claire Lefebvre, 2017-06-03 Handbook of Categorization in Cognitive Science, Second Edition presents the study of categories and the process of categorization as

viewed through the lens of the founding disciplines of the cognitive sciences, and how the study of categorization has long been at the core of each of these disciplines. The literature on categorization reveals there is a plethora of definitions, theories, models and methods to apprehend this central object of study. The contributions in this handbook reflect this diversity. For example, the notion of category is not uniform across these contributions, and there are multiple definitions of the notion of concept. Furthermore, the study of category and categorization is approached differently within each discipline. For some authors, the categories themselves constitute the object of study, whereas for others, it is the process of categorization, and for others still, it is the technical manipulation of large chunks of information. Finally, yet another contrast has to do with the biological versus artificial nature of agents or categorizers. - Defines notions of category and categorization - Discusses the nature of categories: discrete, vague, or other - Explores the modality effects on categories - Bridges the category divide - calling attention to the bridges that have already been built, and avenues for further cross-fertilization between disciplines
