*Chip Wars* Brian W. Kelly,2005 There is no better kept secret in your computer than the chip that makes everything go. Most People simply look for Intel Inside and look no further. That paradigm had been working for years. Today you can find better performance and lower prices with alternative processing chips. Intel, the dominant chip maker in the world is a household name but is it still the technology leader that it claims to be? This book answers that question and it also gives you information that you need to know to understand what's inside the engine of your computer and why the old maxims no longer apply. You won't be able to put this book down. Everything you want to know about chips is in here. The beauty of this book is that it not only gives you the inside scoop on which engine should drive your PC, but it also offers a first-class business and historical perspective on a fascinating technology based industry. The Chip War between AMD and Intel, IBM, and others will be big news for years to come. Even then, the case may not be decided permanently. Who will survive? Who

will win the Chip Wars? This book gives you the best insights as to what the fight is all about and who is poised to win. Though this book was originally produced in 2005 and it is in its second reprint with minor modifications, it is still the defining book for programmers, analysts, IT Directors, network analysts, etc. Even John Q. Public can gain from reading this great book. It speaks the language of every day Americans and does not assume everybody is a technology engineer. You may even find yourself selling or buying some stock based on what you are about to gain from this book. The Chip industry is a real soap opera and the facts actually make a great tale. When you read the details, you will be glued to this book. You will soon know the whole story. With lots of chatter behind the scenes, IBM, an unlikely contestant in the Chip Wars, is keeping very quiet. But isn't Big Blue the leader in future home technology with its lock on the game console industry? Why is it that it seems that the only two chip companies who are not paying IBM for semiconductor advice are IBM and Intel? What about the many semiconductor partnerships going on today? Who will they benefit? Why does it seem that IBM, a company that is theoretically not even at war with Intel on all of the industry semiconductor teams? Could this group of partners be ready to take on Intel in the open community? Viva La Guerra!
