Principles of Pharmacology David E. Golan, 2008 This primary textbook for a first course in pharmacology offers an integrated, systems-based, and mechanism-based approach to understanding drug therapy. Each chapter focuses on a target organ system, begins with a clinical case, and incorporates cell biology, biochemistry, physiology, and pathophysiology to explain how and why different drug classes are effective for diseases in that organ system. Over 400 two-color illustrations show molecular, cellular, biochemical, and pathophysiologic processes underlying diseases and depict targets of drug therapy. Each Second Edition chapter includes a drug summary table presenting mechanism, clinical applications, adverse effects, contraindications, and therapeutic considerations. New chapters explain how drugs produce adverse effects and describe the life cycle of drug development. The fully searchable online text and an image bank are available on thePoint.

Genetic Technology: A New Frontier Assessment Office Of Technology, 2020-09-23 First published in 1982 . This report

examines the application of classical and molecular genetic technologies to micro-organisms, plants, and animals. This book is one of the first comprehensive documents on emerging genetic technologies and their implications for society. The authors discuss the opportunities and problems involved, describe current techniques, and attempt to project some of the economic, environmental, and institutional impacts of those techniques. The issues they raise go beyond those of technology, utility, and economic feasibility. As we gain the ability to manipulate life, we must face basic questions of just what life means and how far we can reasonably-and safely-allow ourselves to go.
