java - how to Call super constructor in Lombok - Stack Overflow Apr 20, 2015 · how to Call super constructor in Lombok Asked 10 years, 4 months ago Modified 1 year, 1 month ago Viewed 339k times *python - replace block within { { super () } } - Stack Overflow* In the child template, I would like to include everything that was in the head block from the base (by calling { { super() } } and include some additional things, yet at the same time replace the title block within the super call. How to call a parent class function from derived class function? How do I call the parent function from a derived class using C++? For example, I have a class called parent, and a class called child which is derived from parent. Within each class there is a print oop - What does 'super' do in Python? - Stack Overflow Nov 3, 2015 · The one without super hard-codes its parent's method - thus is has restricted the behavior of its method, and subclasses cannot inject functionality in the call chain. The one with super has greater flexibility. The call chain for the methods can be ... **Understanding Python super() with __init__ () methods** Feb 23, 2009 · super() lets you avoid referring to the base class explicitly, which can be nice. But the main advantage comes with multiple inheritance, where all sorts of fun stuff can happen. **What is a difference between <? super E> and <? extends E>?** Sep 2, 2009 · The first (<? super E>) says that it's "some type which is an ancestor (superclass) of E"; the second (<? extends E>) says that it's "some type which is a subclass of E". (In both cases E itself is okay.) So the constructor uses the ? extends E form so it guarantees that when it fetches values from the collection, they will all be E or some subclass (i.e. it's compatible). The ... **How does Python's super () work with multiple inheritance?** In fact, multiple inheritance is the only case where super() is of any use. I would not recommend using it with classes using linear inheritance, where it's just useless overhead. **'super' object has no attribute '__getattr__' in python3** Mar 5, 2015 · The Python attribute retrieval mechanism works in a way that a class __getattr__ is called as "last resource" to try to get an attribute for an instance of that class. Your code is right - it fails due to your superclass of "Example" - in this case "object" - not having a __getattr__ attribute. If you are not at a deep class hierarchy and want to perform custom attribute retrieval ... **super () in Java - Stack Overflow** Sep 22, 2010 · super() is a special use of the super keyword where you call a parameterless parent constructor. In general, the super keyword can be used to call overridden methods, access hidden fields or invoke a superclass's constructor. *coding style - Using "super" in C++ - Stack Overflow* As for chaining super::super, as I mentionned in the question, I have still to find an interesting use to that. For now, I only see it as a hack, but it was

worth mentioning, if only for the differences with Java (where you can't chain "super").
