TOL. Torre di Londra. Test di valutazione delle funzioni esecutive (pianificazione e problem solving). Con CD-ROM
Giuseppina Sannio Fancello, Claudio Vio, Carlo Cianchetti, 2006 Il test Torre di Londra (TOL) valuta le abilità di decisione strategica e di problem solving in bambini dai 4 ai 13 anni. Si basa sull'utilizzo di uno strumento (contenuto nella scatola) costituito da tre pioli di diversa lunghezza, nei quali sono infilate tre biglie (una rossa, una verde e una blu): il soggetto deve spostare queste biglie in un certo numero di mosse in modo da ottenere la configurazione indicata dall'esaminatore. Il test, di cui in questo volume si propone la standardizzazione italiana, effettuata su un totale di 1.772 soggetti, è utile nei casi in cui si voglia valutare se il bambino possiede alcune funzioni esecutive, fondamentali tanto nella vita quotidiana, quanto in una serie di apprendimenti complessi (per esempio nella stesura del piano di esecuzione di un compito, nella soluzione di problemi matematici, ecc.). Grazie alla sua semplicità di applicazione e all'attendibilità della valutazione, il TOL è uno degli strumenti maggiormente utilizzati attualmente in vari contesti clinici e sperimentali. Al volume è allegato un CD-ROM che contiene copia degli allegati, dei protocolli stampabili e dei dati normativi, e due strumenti per la somministrazione del test. Executive Function(s): Conductor, Orchestra or Symphony? Towards a Trans-Disciplinary Unification of Theory and Practice Across Development, in Normal and Atypical Groups Lynne A. Barker, Nicholas Morton, 2018-08-30 There are several theories of executive function(s) that tend to share some theoretical overlap yet are also conceptually distinct, each bolstered by empirical data (Norman and Shallice, 1986; Shallice & Burgess, 1991; Stuss and Alexander, 2007; Burgess, Gilbert, & Dumentheil, 2007; Burgess & Shallice, 1996; Miyake et al., 2000). The notion that executive processes are supervisory, and most in demand in novel situations was an early conceptualization of executive function that has been adapted and refined over time (Norman & Shallice, 1986; Shallice, 2001; Burgess, Gilbert & Dumentheil, 2007). Presently there is general consensus that executive functions are multi-componential (Shallice, 2001), and are supervisory only in the sense that attention in one form or another is key to the co-ordination of other hierarchically organized 'lower' cognitive processes. Attention in this sense is defined as (i) independent but interrelated attentional control processes (Stuss & Alexander, 2007); (ii) automatic orientation towards stimuli in the environment or internally-driven thought (Burgess, Gilbert & Dumontheil, 2007); (iii) the automatically generated interface between tacit processes and strategic conscious thought (Barker, Andrade,

Romanowski, Morton and Wasti, 2006; Morton and Barker, 2010); and (iv) distinct but interrelated executive processes that maintain, update and switch across different sources of information (Miyake et al., 2000). One problem is that executive dysfunction or dysexecutive syndrome (Baddeley & Wilson, 1988) after brain injury typically produces a constellation of deficits across social, cognate, emotional and motivational domains that rarely map neatly onto theoretical frameworks (Barker, Andrade & Romanowski, 2004). As a consequence there is debate that conceptual theories of executive function do not always correspond well to the clinical picture (Manchester, Priestley & Jackson, 2004). Several studies have reported cases of individuals with frontal lobe pathology and impaired daily functioning despite having little detectable impairment on traditional tests of executive function (Shallice & Burgess, 1991; Eslinger & Damasio, 1985; Barker, Andrade & Romanowski, 2004; Andrés & Van der Linden, 2002; Chevignard et al., 2000; Cripe, 1998; Fortin, Godbout & Braun, 2003). There is also some suggestion that weak ecological validity limits predictive and clinical utility of many traditional measures of executive function (Burgess et al, 2006; Lamberts, Evans & Spikman, 2010; Barker, Morton, Morrison, McGuire, 2011). Complete elimination of environmental confounds runs the risk of generating results that cannot be generalized beyond constrained circumstances of the test environment (Barker, Andrade & Romanowski, 2004). Several researchers have concluded that a new approach is needed that is mindful of the needs of the clinician yet also informed by the academic debate and progress within the discipline (McFarquhar & Barker, 2012; Burgess et al., 2006). Finally, translational issues also confound executive function research across different disciplines (psychiatry, cognitive science, and developmental psychology) and across typically developing and clinical populations (including Autism Spectrum Disorders, Head Injury and Schizophrenia - Blakemore & Choudhury, 2006; Taylor, Barker, Heavey & McHale, 2013). Consequently, there is a need for unification of executive function approaches across disciplines and populations and narrowing of the conceptual gap between theoretical positions, clinical symptoms and measurement.

BNV 12-18 Maria Gugliotta, 2009 La BNV 12-18 è una batteria di test per la valutazione neuropsicologica delle principali funzioni cognitive (linguaggio, memoria, percezione, attenzione, ecc.) in ragazzi dai 12 ai 18 anni, che completa la BNV 5-11 per l'età evolutiva. Essa consente a psicologi clinici e neuropsicologi di individuare singoli disturbi in ambiti specifici e di definire un profilo generale delle competenze mnemoniche, prassiche, visuospatiali, ecc. Il volume presenta una sintesi dei dati teorici ed empirici a disposizione rispetto allo sviluppo cerebrale e neurofunzionale in adolescenza, i dati normativi e psicometrici e alcuni esempi di applicazioni in ambito clinico. Contiene inoltre il Manuale per l'esaminatore, che fornisce le informazioni per una corretta somministrazione delle prove, il Protocollo di registrazione per l'assegnazione e il riepilogo dei

punteggi e il Fascicolo test, con il materiale cartaceo da sottoporre al ragazzo. I dati normativi sono stati ottenuti su un campione rappresentativo di adolescenti italiani dai 12 ai 18 anni.

Malattia di Parkinson e parkinsonismi Alberto Costa, Carlo Caltagirone, 2009-11-25 L'opera nasce dall'esigenza di raccogliere in una pubblicazione unitaria le conoscenze sul tema dei disturbi cognitivi nella malattia di Parkinson e nei "parkinsonismi". Il forte impulso dato alla ricerca sull'argomento ha, infatti, prodotto negli ultimi anni un'ampia letteratura che documenta l'elevato livello di complessità della questione, per la cui comprensione si rende necessaria un'analisi ragionata di natura multidimensionale. La parte iniziale dell'opera è dedicata all'illustrazione delle caratteristiche neuropatologiche che definiscono la malattia di Parkinson. I successivi contributi si incentrano sulle proprietà dei deficit neuropsicologici e sui metodi di valutazione attualmente disponibili. Ampio spazio è riservato, in questa parte, alla discussione sui modelli di interpretazione neurobiologica dei deficit cognitivi con particolare attenzione all'interazione tra tali disturbi e i meccanismi d'azione di neurotrasmettitori/neuromodulatori quali, ad esempio, l'acetilcolina e la dopamina. I capitoli della sezione finale del volume sono dedicati alla disamina dei correlati neurali dei deficit neuropsicologici nella malattia di Parkinson così come emergono dall'applicazione di metodiche di neuroimaging e di stimolazione magnetica transcranica. Il duplice vertice teorico/clinico mantenuto nella trattazione dei contenuti rende l'opera fruibile da un'ampia audience di operatori. In particolare, neurologi, psicologi, neuropsicologi, geriatri, fisiatristi, psichiatri, logopedisti e fisioterapisti possono trovare nel libro un valido strumento di aggiornamento e approfondimento professionale. Il volume, per sua natura, può inoltre rappresentare un utile riferimento di studio per soggetti in formazione. Infine, nelle intenzioni dei curatori l'opera vuole anche essere uno strumento di sensibilizzazione sull'importanza che riveste la "questione cognitiva" nella gestione complessiva della malattia di Parkinson per professionisti, quali, ad esempio, i medici di base, che hanno in molti casi il primo contatto con il paziente.

Manuale operativo di metodologia peritale Marco Monzani, Miriam Lazzarettoi, 2019-10-23 Il volume affronta l'importante questione della metodologia peritale applicata al contesto forense, in particolare penale. Gli autori, consapevoli che il contesto forense è molto diverso rispetto al contesto clinico/terapeutico, intendono presentare uno strumento di agile consultazione per coloro che operano in qualità di periti e consulenti. Le questioni di carattere meramente teorico fanno da sfondo a un'opera che vuole essere uno strumento applicativo, per questo gli autori hanno preferito approfondire in particolare le questioni di carattere operativo. I tre case report presentati nella seconda parte del volume esemplificano oltremodo la metodologia che gli autori ritengono corretta in situazioni e contesti peritali e consulenziali penali.

La Neurologia della Sapienza Alfredo Berardelli, 2022-09-01 Negli ultimi due decenni la ricerca neurologica italiana ha avuto un notevole sviluppo contribuendo considerevolmente alla crescita culturale della Neurologia mondiale. Il Manuale è stato scritto dai neurologi dell'Università Sapienza di Roma, esperti nei diversi settori della Neurologia. Particolare attenzione è stata dedicata agli aspetti diagnostici, clinici e terapeutici delle diverse malattie neurologiche segnalando anche i recenti avanzamenti scientifici. Il volume è costituito da 33 capitoli (su argomenti di Neurologia, Neuroradiologia e Neurochirurgia), compresi un capitolo sulla Neuroriabilitazione, uno sulla Neurologia Infantile e uno sui Principi di Psichiatria. Il Manuale è uno strumento utile per gli studenti di Medicina, compresi gli studenti delle Professioni sanitarie, ma anche per gli specializzandi di Neurologia. Il massimo spazio è stato dedicato, infatti, ai sintomi di possibile origine neurologica che si incontrano nella pratica clinica generale ed alle patologie neurologiche che il clinico deve conoscere.

Metacognizione, neuropsicologia e riabilitazione psichiatrica Maria C. Quattropiani, Roberta Formulari, 2017-05-10
Questo volume, nato per divulgare una ricerca-intervento sulla costruzione e la valutazione dell'efficacia di un trattamento per la schizofrenia, si è rivelato un manuale che può soddisfare le esigenze di informazione e formazione dei professionisti impegnati nella Salute Mentale e degli studenti dei Corsi di Laurea in Riabilitazione Psichiatrica e Scienze Psicologiche. La natura multifattoriale della schizofrenia rende complessa la cura nei servizi che devono offrire all'utenza trattamenti evidence based e fondati su best practice. Aderendo a queste linee guida, il training qui presentato, è il frutto di una vision e di studi integrati che abbandonano visioni parziali dirigendosi verso approcci integrativi per condurre il paziente ad una progressiva riacquisizione della propria identità ed al riadattamento all'interno della comunità. Sono anche affrontate le questioni relative alla recovery, qui intesa come condizione soggettiva di recupero legata al rafforzamento delle attività cognitive di base e alla metacognizione, abilità imprescindibili per il funzionamento psicosociale e per il consolidamento del senso del sé, nonché per la ricostruzione della dimensione dell'identità del paziente, spesso umiliata e irrigidita dalla patologia e dallo stigma sociale. Attraverso questo nostro lavoro speriamo di promuovere una visione più fiduciosa sull'esito della patologia schizofrenica, restituendo speranza ai pazienti, ai familiari e agli operatori della salute mentale.
