A listing of additional resources or reference material, many with internet links, is also included at the end of each chapter. Readers will find: Principles of process safety, properties of hydrocarbons, vapor cloud explosions (VCE), and boiling liquid expanding vapor explosions (BLEVE) Most frequent causes of significant process safety events in refining and petrochemical industries Causal factors in over 100 global case studies of operations and incidents, divided into thirty-five subchapters with several examples for each, explaining what happened and what could have happened Key lessons learned, written in simple terms using descriptions without jargon or complicated formulas *Process Operations Safety* is an essential learning resource for petroleum refining and petrochemical plant operators, line supervisors, and critical support staff with field responsibility, such as process and mechanical engineers, along with advanced students at community and four-year colleges and technical/trade schools taking a process operations course.
