Carburants et moteurs. Tome 1 Jean-Claude Guibet, 1997-10-08 Cet ouvrage en deux tomes décrit de façon détaillée, avec le sens critique nécessaire, les réalisations technologiques en service ou en cours de développement pour produire des carburants de haute qualité et les utiliser de façon optimale sur tous les types de moteurs thermiques équipant voitures, camions, avions et navires. Les défis imposés par les objectifs d'agrément et de confort d'utilisation, de protection de l'environnement et de réduction de la consommation d'énergie fossile sont analysés de façon rigoureuse et impartiale, en s'appuyant sur la compétence et l'expérience des chercheurs de l'Institut Français du Pétrole. Tous les types de carburants sont examinés : essences, gazole, gaz de pétrole liquéfiés, gaz naturel, biocarburants, fuels lourds, produits à usages spéciaux, etc. Les situations spécifiques à chaque région du monde (Etats-Unis, Europe, Japon, pays en cours de développement) sont comparées et commentées en fonction des différents contextes énergétiques, technico-économiques et politiques. L'ouvrage se veut ainsi scientifique mais attrayant, exhaustif et solidement structuré, objectif et lucidement engagé : il s'adresse donc à un très large public. Table des matières : Introduction : les transports à l'approche de l'an 2000. 1. Caractéristiques physico-chimiques des carburants. 2. Techniques de raffinage. 3. Essences. 4. Gazole. Bibliographie.
