Environment Sol 90,2012-12-01 Updated for 2013, the Environment is one title in the Britannica Illustrated Science Library Series. It does not take an expert in environmental science to realize that the world is changing. Is it getting warmer? It depends on where you live. Global warming does not necessarily mean that where you live it will be warmer. For most of the people on the planet, the changes to the climate are virtually imperceptible. That is not the case for many plants and animals, however. These are some of the topics covered by this book. The purpose of this book is to make you aware of various environmental challenges and their possible solutions. Once we begin to understand a given environmental issue, each one of us can begin to evaluate our own actions and change them if necessary to protect life on this planet.

Available to Be Poisoned Dipali Mathur, 2022-09-23 In Available to Be Poisoned: Toxicity as a Form of Life, Dipali Mathur contends that the saturation of the planet with toxic chemicals marks a deliberate and violent relationship with the Earth and its others, born of colonialism and capitalism's entwined histories. Mathur offers the concept of toxicity as a form of life to signpost the normalization of toxic exposure and analyzes how states use toxicity to control populations on the fringes of our global political economy by making them available to be poisoned.

Environmental Law and Policy in India Shyam Divan, Armin Rosencranz, 2022-08-04 Environmental law and policy in India affects all sections of society. Those most deeply affected by it are the poor. They are the first victims of poor sanitation, polluted air, and contaminated water. Since the 1970s, efforts to protect environmental quality have met with limited success, posing enduring challenges for policy designers and decision-makers entrusted with protecting and preserving natural resources. This edition of Environmental Law and Policy retains the familiar analytical structure of the second edition and includes all major developments since then. It focuses on Indian environmental law, policies, problems, and needs with the comprehensiveness of an American law case book, compiles all the leading cases in environmental law in India with concise extracts of landmark judgments and policy documents, and provides discussions on projects which could potentially degrade the environment. This volume also covers air and water pollution, forests, wildlife, noise pollution, common property resources and tribal communities, environmental impact assessment, coastal regulations, large projects, urban problems, the National Green Tribunal, hazardous substances, transnational environmental policies, and international environment law. It is interlaced with notes, comments, and questions intended to encourage critical thinking amongst lawyers and law students.

Passages Sam Okoth Opondo, Michael J. Shapiro, 2024-06-11 Passages: On geo-analysis and the aesthetics of precarity is a

multi-genre and transdisciplinary text addressing themes such as colonialism, nuclear zones of abandonment, migration control regimes, transnational domestic work, the biocolonial hostilities of the hospitality industry, legal precarities behind the international criminal justice regime, the shadow-worlds of the African soccerscape, and immunity regimes related to the COVID-19 pandemic. This book invites inquiry into today's apocalyptic narratives, humanitarian reason, and international criminal justice regimes, as well as the precarity generated by citizen time and 'consulate time'. The aesthetic breaks emerging from the book's image-text montage draw attention to the ethics of encounter and passage that challenges colonial, domestic, and nation-statist sovereignty regimes of inattention.

Air Pollution Calculations Daniel A. Vallero, 2019-05-03 Air Pollution Calculations introduces the equations and formulae that are most important to air pollution, but goes a step further. Most texts lack examples of how these equations and formulae apply to the quantification of real-world scenarios and conditions. The ample example calculations apply to current air quality problems, including emission inventories, risk estimations, biogeochemical cycling assessments, and efficiencies in air pollution control technologies. In addition, the book explains thermodynamics and fluid dynamics in step-by-step and understandable calculations using air quality and multimedia modeling, reliability engineering and engineering economics using practical examples likely to be encountered by scientists, engineers, managers and decision makers. The book touches on the environmental variables, constraints and drivers that can influence pollutant mass, volume and concentrations, which in turn determine toxicity and adverse outcomes caused by air pollution. How the pollutants form, move, partition, transform and find their fate are explained using the entire range of atmospheric phenomena. The control, prevention and mitigation of air pollution are explained based on physical, chemical and biological principles which is crucial to science-based policy and decision-making. Users will find this to be a comprehensive, single resource that will help them understand air pollution, quantify existing data, and help those whose work is impacted by air pollution. - Explains air pollution in a comprehensive manner, enabling readers to understand how to measure and assess risks to human populations and ecosystems actually or potentially exposed to air pollutants - Covers air pollution from a multivariate, systems approach, bringing in atmospheric processes, health impacts, environmental impacts, controls and prevention - Facilitates an understanding of broad factors, like climate and transport, that influence patterns and change in pollutant concentrations, both spatially and over time

Toxic Politics Yanzhong Huang, 2020-10-15 Environmental degradation in China has not only brought a wider range of diseases and other health consequences than previously understood, it has also taken a heavy toll on Chinese society, the economy, and the legitimacy of the party-state. In Toxic Politics, Yanzhong Huang presents new evidence of China's deepening health crisis and challenges the widespread view that China is winning the war on pollution. Although government leaders are learning, stricter and more centralized policy enforcement measures have not been able to substantially reduce pollution or improve public health. Huang connects this failure to pathologies inherent in the institutional structure of the Chinese party-state, which embeds conflicting incentives for officials and limits the capacity of the state to deliver public goods. Toxic Politics reveals a political system that is remarkably resilient but fundamentally flawed. Huang examines the implications for China's future, both domestically and internationally.

Smart Economy in Smart Cities T. M. Vinod Kumar, 2016-08-25 The present book highlights studies that show how smart cities promote urban economic development. The book surveys the state of the art of Smart City Economic Development through a literature survey. The book uses 13 in depth city research case studies in 10 countries such as the North America, Europe, Africa and Asia to explain how a smart economy changes the urban spatial system and vice versa. This book focuses on exploratory city studies in different countries, which investigate how urban spatial systems adapt to the specific needs of smart urban economy. The theory of smart city economic development is not yet entirely understood and applied in metropolitan regional plans. Smart urban economies are largely the result of the influence of ICT applications on all aspects of urban economy, which in turn changes the land-use system. It points out that the dynamics of smart city GDP creation takes 'different paths,' which need further empirical study, hypothesis testing and mathematical modelling. Although there are hypotheses on how smart cities generate wealth and social benefits for nations, there are no significant empirical studies available on how they generate urban economic development through urban spatial adaptation. This book with 13 cities research studies is one attempt to fill in the gap in knowledge base.
