Functions, Data, and Models Sheldon P. Gordon, Florence S. Gordon, 2025-02-24 This is a college algebra-level textbook written to provide the kind of mathematical knowledge and experiences that students will need for courses in other fields, such as biology, chemistry, business, finance, economics, and other areas that are heavily dependent on data either from laboratory experiments or from other studies. The focus is on the fundamental mathematical concepts and the realistic problem-solving via mathematical modeling rather than the development of algebraic skills that might be needed in calculus.

Functions, Data, and Models presents college algebra in a way that differs from almost all college algebra books available today. Rather than going over material covered in high school courses the Gordons teach something new. Students are given an introduction to data analysis and mathematical modeling presented at a level that students with limited algebraic skills can understand. The book contains a rich set of exercises, many of which use real data. Also included are thought experiments or what if questions that are meant to stretch the student's mathematical thinking.

A Different Degree Hari Kumar, 2021-04-07 Winston Churchill defined Russia as “a riddle, wrapped in a mystery, inside an enigma”. It was still the case when Hari Kumar left southern India and went behind the Iron Curtain in the seventies to study medicine at Peoples Friendship University, Moscow, USSR. Through the eyes of a man from a very different background and culture, Hari recounts his intimate observations of the lives and habits of the Russians; their joys, troubles, ambitions and hopes. It is a true story from a fascinating period in History delightfully told with an abundance of humour. *A Different Degree* gives you a remarkable insight to attempt to solve the riddle, unravel the mystery and understand the enigma that was the USSR.
