Applied Quantum Cryptography Christian Kollmitzer, Mario Pivk, 2010-02-28 Using the quantum properties of single photons to exchange binary keys between two partners for subsequent encryption of secret data is an absolutely novel technology. Only a few years ago quantum cryptography - or better Quantum Key Distribution - was the domain of basic research laboratories at universities. But during the last few years things changed. Quantum Key Distribution or QKD left the laboratories and was picked up by more practical-oriented teams that worked hard to develop a practically applicable technology out of the astonishing results of basic research. One major milestone toward a QKD technology was a large research and development project funded by the European Commission that aimed at combining quantum physics with complementary technologies that are necessary to create a technical solution: electronics, software, and network components were added within the project SECOQC (Development of a Global Network for Secure Communication based on Quantum Cryptography) that teamed up all expertise on European level to get a technology for future cryptography.

**Biomimetics for Architecture & Design** Göran Pohl, Werner Nachtigall, 2015-10-30 This book provides the readers with a timely guide to the application of biomimetic principles in architecture and engineering design. As a result of a combined effort by two internationally recognized authorities, the biologist Werner Nachtigall and the architect Göran Pohl, the book describes the principles which can be used to compare nature and technology, and at the same time it presents detailed explanations and examples showing how biology can be used as a source of inspiration and “translated” in building and architectural solutions (biomimicry). Even though nature cannot be directly copied, the living world can provide architects and engineers with a wealth of analogues and inspirations for their own creative designs. But how can analysis of natural entities give rise to advanced and sustainable design? By reporting on the latest bionic design methods and using extensive artwork, the book guides readers through the field of nature-inspired architecture, offering an extraordinary resource for professional architects, engineers, designers and urban planners, as well as for university teachers, researchers and students. Natural evolution is seen throughout the book as a powerful resource that can serve architecture and design by providing innovative, optimal and sustainable solutions.

**EHealth2015 - Health Informatics Meets EHealth** D. Hayn, G. Schreier, E. Ammenwerth, 2015-06-11 Traditionally, medicine has involved therapies chosen according to clinical guidelines, often arrived at through clinical trials which categorized patients into patient groups. Such clinical guidelines would dictate that all patients within a specific group should be treated in exactly the same way. More recently, the paradigm has shifted towards personalized medicine, and in future, individual treatment plans will depend more on the specific characteristics of individual patients, including genomic data. This book presents the proceedings of the 9th scientific eHealth conference, the eHealth Summit Austria, held in Vienna, Austria, in June 2015. Among the main topics addressed at the conference were: active and ambient assisted living (AAL); eHealth education; electronic patient and health records; ethical legal and economic aspects of eHealth; ICT for integrated treatment, research and personalized medicine; patient portals and personal health records; semantic interoperability of information systems; and visualization of clinical or epidemiological data. One of the first fields of application for personalized medicine has been oncology, with current diagnostic tools including molecular risk factors, biomarkers and individual genomes. The next step in personalized medicine will be to extend these to a more general, personalized health approach. Such individual risk assessment and preventive strategies promise to have a huge impact on

our healthcare systems, and this book will be of interest to all those involved in healthcare research, provision and practice.

Public-Private Innovation Networks in Services Faïz Gallouj, Luis Rubalcaba, Paul Windrum, 2013-01-01 For too long the prevalent view has been that the public and private sectors differ dramatically when it comes to innovation. This book takes a radically different tack, not as a rhetorical stance, but as the basis for fruitful empirical analysis. The studies here show that public service organizations and their leaders can be innovative in their own right. The contributions made here provide insights that will productively inform future research and practice. Æ Ian Miles, University of Manchester, UK This book is devoted to the study of public-private innovation networks in services (ServPPINs). These are a new type of innovation network which have rapidly developed in service economies. ServPPINs are collaborations between public and private service organizations, their objective being the development of new and improved services which encompass both technological and non-technological innovations. The book presents in-depth empirical research from different service sectors across Europe in order to explore the nature of these public-private collaborations. It elucidates the processes of formation, entrepreneurship and management, the types of innovations ServPPINs generate, and the nature of the public policies required to support them. This multidisciplinary book will appeal to academics and students in economics, management, and the sociology of services and innovation. Managers in the public and private service sector and public authorities will also find much to interest them.

dHealth 2019 – From eHealth to dHealth D. Hayn,A. Eggerth,G. Schreier,2019-06-05 We have all become familiar with the term 'eHealth', used to refer to health informatics and the digital aspects of healthcare; but what is dHealth? This book presents the proceedings of the 13th annual conference on Health Informatics Meets Digital Health (dHealth 2019), held in Vienna, Austria, on 28 – 29 May 2019. In keeping with its interdisciplinary mission, the conference series provides a platform for researchers, practitioners, decision makers and vendors to discuss innovative health informatics and eHealth solutions to improve the quality and efficiency of healthcare using digital technologies. The subtitle and special focus of dHealth 2019 is 'from eHealth to dHealth', which stresses that healthcare will in future become ever more data-driven. While eHealth in general concerns healthcare IT solutions and professional healthcare providers, dHealth addresses broader fields of application in many areas of life, including sensors and sensor informatics, networks, genomics and bioinformatics, data-centered solutions, machine learning, and many more. The 32 papers included here provide an insight into the state-of-the-art of different aspects of dHealth, including the design and evaluation of user interfaces, patient-centered solutions, electronic health/medical/patient records, machine learning in healthcare and biomedical data analytics, and the book offers the reader an interdisciplinary approach to digital health. It will be of interest to researchers, developers, and healthcare professionals alike.

**Advanced Microsystems for Automotive Applications 2012** Gereon Meyer,2012-05-03 The ambitious objectives of future road mobility, i.e. fuel efficiency, reduced emissions, and zero accidents, imply a paradigm shift in the concept of the car regarding its architecture, materials, and propulsion technology, and require an intelligent integration into the systems of transportation and power. ICT, components and smart systems have been essential for a multitude of recent innovations, and are expected to be key enabling technologies for the changes ahead, both inside the vehicle and at its interfaces for the exchange of data and power with the outside world. It has been the objective of the International Forum on Advanced Microsystems for Automotive Applications (AMAA) for almost two decades to detect novel trends and to discuss technological implications and innovation potential from day one on. In 2012, the topic of the AMAA conference is "Smart Systems for Safe, Sustainable and Networked Vehicles". The conference papers selected for this book address current research, developments

and innovations in the field of ICT, components and systems and other key enabling technologies leading to the automobile and road transport of the future. The book focuses on application fields such as electrification, power train and vehicle efficiency, safety and driver assistance, networked vehicles, as well as components and systems. Additional information is available at [www.amaa.de](http://www.amaa.de)

**Advanced Microsystems for Automotive Applications 2013** Jan Fischer-Wolfarth, Gereon Meyer, 2013-06-04 The road vehicle of the future will embrace innovations from three major automotive technology fields: driver assistance systems, vehicle networking and alternative propulsion. Smart systems such as adaptive ICT components and MEMS devices, novel network architectures, integrated sensor systems, intelligent interfaces and functional materials form the basis of these features and permit their successful and synergetic integration. They increasingly appear to be the key enabling technologies for safe and green road mobility. For more than fifteen years the International Forum on Advanced Microsystems for Automotive Applications (AMAA) has been successful in detecting novel trends and in discussing the technological implications from early on. The topic of the AMAA 2013 will be “Smart Systems for Safe and Green Vehicles”. This book contains peer-reviewed papers written by leading engineers and researchers which all address the ongoing research and novel developments in the field. [www.amaa.de](http://www.amaa.de)

*Adverse Effects of Engineered Nanomaterials* Bengt Fadeel, Antonio Pietroiusti, Anna A. Shvedova, 2017-02-14 Adverse Effects of Engineered Nanomaterials: Exposure, Toxicology, and Impact on Human Health, Second Edition, provides a systematic evaluation of representative engineered nanomaterials (ENM) of high volume production and their high economic importance. Each class of nanomaterials discussed includes information on what scientists, industry, regulatory agencies, and the general public need to know about nanosafety. Written by leading international experts in nanotoxicology and nanomedicine, this book gives a comprehensive view of the health impact of ENM, focusing on their potential adverse effects in exposed workers, consumers, and patients. All chapters have been updated with new sections on the endocrine system and other organ systems. In addition, other newly added sections include introductory chapters on the physio-chemical

characterization of nanomaterials and interactions between nanomaterials and biological systems, as well as a new chapter that explores risk assessment and management of nanomaterials. This book fills an important need in terms of bridging the gap between experimental findings and human exposure to ENM, also detailing the clinical and pathological consequences of such exposure in the human population. - Uses a schematic, non-exhaustive approach to summarize the most important research data in this field - Discusses the health implications of experimental data in nanotoxicology - Presents a completely revised edition that focuses on the human health impacts of engineered nanomaterials, including many organ-specific chapters
