Hands-On AI Trading with Python, QuantConnect and AWS Jiri Pik, Ernest P. Chan, Jared Broad, Philip Sun, Vivek Singh, 2025-01-29 Master the art of AI-driven algorithmic trading strategies through hands-on examples, in-depth insights, and step-by-step guidance Hands-On AI Trading with Python, QuantConnect, and AWS explores real-world applications of AI technologies in algorithmic trading. It provides practical examples with complete code, allowing readers to understand and expand their AI toolbelt. Unlike other books, this one focuses on designing actual trading strategies rather than setting up backtesting infrastructure. It utilizes QuantConnect, providing access to key market data from Algoseek and others. Examples are available on the book's GitHub repository, written in Python, and include performance tearsheets or research Jupyter notebooks. The book starts with an overview of financial trading and QuantConnect's platform, organized by AI technology used: Examples include constructing portfolios with regression models, predicting dividend yields, and safeguarding against market volatility using machine learning packages like SKLearn and MLFinLab. Use principal component analysis to reduce model features, identify pairs for trading, and run statistical arbitrage with packages like LightGBM. Predict market volatility regimes and allocate funds accordingly. Predict daily returns of tech stocks using classifiers. Forecast Forex pairs' future prices using Support Vector Machines and wavelets. Predict trading day momentum or reversion risk using TensorFlow and temporal CNNs. Apply large language models (LLMs) for stock research analysis, including prompt engineering and building RAG applications. Perform sentiment analysis on real-time news feeds and train time-series forecasting models for portfolio optimization. Better Hedging by Reinforcement Learning and AI: Implement reinforcement learning models for hedging options and derivatives with PyTorch. AI for Risk Management and Optimization: Use corrective AI and conditional portfolio optimization techniques for risk management and capital allocation. Written by

domain experts, including Jiri Pik, Ernest Chan, Philip Sun, Vivek Singh, and Jared Broad, this book is essential for hedge fund professionals, traders, asset managers, and finance students. Integrate AI into your next algorithmic trading strategy with Hands-On AI Trading with Python, QuantConnect, and AWS.

The Making of a World Trading Power Lucia Coppolaro, 2016-03-03 Following its foundation in 1957, the European Economic Community set about establishing itself as a major player on the world stage. One of the first key arenas in which the new organisation began to make its presence felt was the GATT negotiations that took place between 1963 and 1967, known as the Kennedy Round. Through a reconstruction of these on-going negotiations, this book charts the emergence of the EEC as a world trading power and the strategies it adopted that were to have a lasting effect upon European trade policies. As well as proving an important background to the Kennedy Round, the study explains how the EEC/European Union became a powerful actor in international trade, championing a liberal attitude toward the industrial sector but a protectionist one in agriculture. It also addresses the impact of the EEC/EU as regional trading area on the multilateral and global trading system and the EEC/EU trade policy-making. Through an historical analysis of these topics, a much fuller understanding of the actual role and stance of the EEC/EU in world trade is provided, one that not only illuminates events at the time, but provides essential background to the challenges still faced by the international trading system and the World Trade Organization. Based on a wealth of documentary research drawn from European and US archives, this book will be welcomed

by all wishing to better understand the complex nature of international trade in an increasingly globalised market place.

France's Lost Empires Kate Marsh, Nicola Frith, 2011-01-01 This collection of essays investigates the fundamental role that the loss of colonial territories at the end of the Ancient Regime and post-World War II has played in shaping French memories and colonial discourses. In identifying loss and nostalgia as key tropes in cultural representations, these essays call for a re-evaluation of French colonialism as a discourse informed not just by narratives of conquest, but equally by its histories of defeat.
