Koro Arabinda Narayan Chowdhury, 2022-01-01 This book provides a definitive account of koro, a topic of long-standing interest in the field of cultural psychiatry in which the patient displays a fear of the genitals shrinking and retracting. Written by Professor A.N. Chowdhury, a leading expert in the field, it provides a comprehensive overview of the cultural, historical and clinical significance of the condition that includes both cutting-edge critique and an analysis of research and accounts from the previous 120 years published literature. The book begins by outlining the definition, etymology of the term, and clinical features of koro as a culture-bound syndrome, and contextualizes the concept with reference to its historical origins and local experience in Southeast Asia, and its subsequent widespread occurrence in South Asia. It also critically examines the concept of culture-bound disorder and the development of the terminology, such as cultural concepts of distress, which is the term that is currently used in the DSM-5. Subsequent chapters elaborate the cultural context of koro in Chinese and South Asian cultures, including cultural symbolic analysis of associations with animals (fox and turtle) and phallic imagery based on troubling self-perceived aspects of body image that is central to the concept. The second section of the book offers a comprehensive, global literature review, before addressing the current status and relevance of koro, clinically relevant questions of risk assessment and forensic issues, and research methodology. This landmark work will provide a unique resource for clinicians and researchers working in cultural psychiatry, cultural psychology, anthropology, medical sociology, social work and psychosexual medicine.

Plastic and Aesthetic Regenerative Surgery and Fat Grafting Amin Kalaaji, 2022-05-23 Readers will discover the relatively new and rapidly growing field of regenerative surgery and fat grafting, valuable for numerous plastic surgery, reconstructive, and aesthetic/cosmetic essentials. Though many books have covered specific areas or topics in regenerative surgery, the market lacks a work that tackles the full spectrum of regenerative surgery and its clinical application. This book responds to that need and presents chapters written by the best: world-renowned surgeons in their field. After an introduction that reflects basic research, most of the book focuses on clinical experience as it relates to applied techniques of processing fat and on the different uses from head to toe. Readers will learn about the history of regenerative surgery, important definitions and background information, and the evidence supporting the use of regenerative surgery.

Practitioners will also find valuable guidance regarding the application of stem cells, evaluation of patient needs, and operative techniques for fat transfer. Subsequent chapters address topics such as graft types, the skin, wound healing, scar treatment, osteoarthritis, burns, scleroderma, hair rejuvenation, facial enhancement combined with facelift, chin augmentation with fat, and breast argumentation or reconstruction with fat. Particular attention is paid to gluteal augmentation with fat, body contouring, genital male and female rejuvenation, and upper and lower extremity regenerative surgery. Surgical anatomy and complications treatment and prevention were emphasized when applied. This resulted is two volumes that encompass 114 chapters, with multiple figures, and video clips, written by 242 authors (including 72 female colleagues) from five continents. Highly informative and carefully structured, this book provides invaluable insight for beginners and experienced plastic surgeons alike, while benefitting advanced surgeons, specialists, and undergraduate and graduate students.

Fat Transfer in Plastic Surgery Alberto Di Giuseppe,Franco Bassetto,Foad Nahai,2023-11-05 Only in recent years new available technologies, the redefinition and refining of intervention techniques, and clinical research studies have widened the spectrum of fat applications in aesthetic and reconstructive surgery. Fat grafting is nowadays one of the most used techniques in plastic reconstructive surgery, as primary method or as an ancillary procedure. The optimized ratio of fat survival has led to standardized techniques followed by most practitioners. The aim of this book is to present up-to-date technologies used for fat extraction, and fat harvesting: latest tools are evaluated examining pros and cons. All recent techniques in aesthetic and reconstructive surgery and their outcomes are described in a clear, comprehensive manner; chapters present the latest research results in stem cell and regenerative medicine, their application to plastic and reconstructive surgery, in particular for hand surgery, ulcer, and capsule contractures in post breast augmentation procedures. Related specific techniques as breast fat transfer, breast hybrid implant, fat transfer and buttock fat transfer are also discussed. Safety issues in fat transfer procedures are examined accurately, particularly those involving buttock fat transfer. Each procedure is completed by a scientific analysis of the main reasons for complications, how to prevent them and the safety guidelines recommended as golden standard to be followed. The surgical part contains clinical cases related to each chapter topic, videos, and all chapters have a box with take home messages. An invaluable tool for correct decision-making for clinicians, fellows and residents in plastic surgery, **Fat Transfer in Plastic Surgery** focuses on indications, applications and surgical techniques for each individual body district, and safe and reliable procedures in the application of latest technology.
