Stephen W. Perkins

Depressor Septi Nasi Muscle Resection Or Nerve Block Daniel G. Moina, 2016 In our daily practice, we usually perform the rhinoplasty without considering the dynamic functions. The depressor septi nasi muscle (DSNM) is very important in nose dynamics. Its hyperactivity in some rhinoplasty patients while they smiling or speaking causes a deformity that includes drooping of the nasal tip, elevation and shortening of the upper lip, and increased maxillary gingival show. The dissection of the depressor septi muscle during rhinoplasty can improve the tip-upper lip relationship in appropriately selected patients.

Miniinvasive Techniques in Rhinoplasty Nikolay Serdev, 2016-03-09 This book is divided into two parts. The first part describes mini-invasive surgical techniques, sufficient to perform the most important tasks in rhinoplasty, such as: tip rotation and projection; closure of the open roof after hump resection; alignment and stabilization of the columella; refinement of the nasal tip, lower third and medial third; narrowing of the alar base. The second part concerns medical rhinoplasty techniques using nerve blocks, injectable fillers etc., which aim is to achieve similar results, despite their temporary effect. Currently, the request for such procedures and their number exceeds that of surgical operations and demonstrates their importance. Although minimally invasive techniques will not totally replace surgical rhinoplasty, this book will serve as a tool to enhance refinement of rhinoplasty and clinical aesthetics. This first textbook in minimally invasive rhinoplasty techniques will be of great help to many doctors and will provoke further development of time-saving, atraumatic and mini-invasive techniques with preservative attitude toward nasal tissues in the modern art of nasal and face beautification.

An Atlas of Human Anatomy for Students and Physicians Carl Toldt, 1904

A Practical Approach to Asian Rhinoplasty Yasushi Sugawara, 2019-11-15 Difficulty in rhinoplasty takes two forms: the aesthetic and the technical. Rhinoplasty surgeons need a sense of beauty to design the target shape, but the shape must comply with the patient's often problematic demands. The only appropriate approach is to suggest two or three shapes that suit the patient's appearance and expectations, and ask the patient to choose between them. The technical difficulty, on the other hand, lies in assessing the anatomical character of the problem and selecting the procedure that will achieve the desired shape. This textbook will help readers to make accurate diagnoses, simulate the target shape employing generally used retouch software, suggest to patients different target shapes, and learn how to choose the best procedure to produce the selected target shape. It will assist in the performance of rhinoplasties which take into account the individual patient's requirements and achieve aesthetic results that guarantee patient satisfaction.
