Munsell Soil Color Charts. 1994 Munsell Color, 1994 Soil colors are most conveniently measured by comparison with a color chart. The collection of charts generally used with soils is a modified version of the collection appearing in the Munsell Book of Color and includes only that portion needed for soils, about one-fifth of the entire range found in the complete edition. The nine charts in the Soil Collection display 322 different standard color chips systematically arranged according to their Munsell notations, on cards carried in a loose leaf notebook. The arrangement is by the three dimensions that combine to describe all colors and are known in the Munsell system as Hue, Value and Chroma. The Hue notation of a color indicates its relation to Red, Yellow, Green, Blue, and Purple; The Value notation indicates its lightness; and the Chroma notation indicates its strength (or departure from a neutral of the same lightness). The colors displayed on the individual Soil Color Charts are of constant Hue, designated by a symbol in the upper right hand-corner of the card. Vertically, the colors become successively lighter from the bottom of the card to the top in visually equal steps; their value increases. Horizontally they increase in Chroma from left to right. The Value notation of each chip is indicated by the vertical scale in the far left column of the chart. The Chroma notation is indicated by the horizontal scale across the bottom of the chart. The nomenclature for soil color consists of two complementary systems: 1. Color names; and 2. The Munsell.

Tiner, 1999-04-21 Understand the current concept of wetland and methods for identifying, describing, classifying, and delineating wetlands in the United States with *Wetland Indicators* - capturing the current state of science's role in wetland recognition and mapping. Environmental scientists and others involved with wetland regulations can strengthen their knowledge about wetlands, and the use of various indicators, to support their decisions on difficult wetland determinations. Professor Tiner primarily focuses on plants, soils, and other signs of wetland hydrology in the soil, or on the surface of wetlands in his discussion of *Wetland Indicators*. Practicing - and aspiring - wetland delineators alike will appreciate *Wetland Indicators'* critical insight into the development and significance of hydrophytic vegetation, hydric soils, and other factors. Munsell Soil-Color Charts Munsell Color, 2021 « This revised edition features the same colors available in previous books plus additional color charts. Included are a 10Y and 5GY soil chart for glauconite soils, a 5R soil chart for Australia and Southeast Asia, and a 7.5R soil chart for tropical and semi-tropical soils. A Munsell high value, low chroma “white” page shows half steps from 8.5 to 9.5 in value with chromas of 1 and 2 for N, 7.5YR, 10YR, and 2.5Y. Use this page to describe carbonate, silica, gypsum, and soluble salt precipitates and evaporites common to arid and semi-arid environments as well as very light-colored parent materials such as diatomaceous earth and volcanic ash. The book’s light gray pages decrease sun glare. The color chips are recessed into each water-resistant page to allow dirt and debris to be wiped off easily with less effect on the color chips.»--
