Tecnología de los oficios metalúrgicos A. Leyensetter, G. Würtemberger, 1987 Para cuantos estén en período de aprendizaje, para el operario metalúrgico y también para el maestro y el técnico, ofrece esta tecnología de los Oficios Metalúrgicos, una poderosa ayuda dentro del taller y también fuera de él. Como fuente de información y obra de consulta constituye un seguro consejero para cuantas gestiones puedan presentarse en la industria metalúrgica

Tecnología de proceso y transformación de materiales Maria Nuria Salán Ballesteros, 2009-07 Los principales objetivos de esta asignatura son la introducción de los distintos tipos de materiales de aplicación industrial, el establecimiento de relaciones estructura-propiedades de cada grupo de materiales y la descripción de los principales procesos de transformación que se desarrollan industrialmente para convertir un material en un componente final. Para ello, se parte del conocimiento básico de la estructura de los materiales de ingeniería (metales, materiales cerámicos, polímeros y compuestos), así como del comportamiento y las características que se asocian con dicha estructura. Se describen los procesos de transformación de componentes, cuya selección se justifica sobre la base de las características de los materiales que se han de transformar, y se indican algunos de los tratamientos más comunes que permiten modificar el comportamiento macroscópico de un componente para adecuarlo a las solicitudes requeridas. En la descripción de los procesos, se introducen los criterios a considerar a la hora de realizar la selección del material más adecuado, en la medida de lo posible.

Tecnología de la madera y del mueble Wolfgang Nutsch, 2025-05-12 Este libro de texto es una obra valiosa para la enseñanza en las escuelas de formación profesional, en los lugares de prácticas y también en las escuelas de maestría y técnica. Al profesional en activo le sirve también como fuente abundante de información. Es también apropiado para estudiarlo a solas y con su índice alfabético como prontuario de consulta, se pueden encontrar respuesta a las dudas técnicas. El texto es de fácil comprensión, resumido y limitado a lo esencial. Numerosas figuras, la mayor parte de ellas dibujos lineales, y tablas informativas apoyan y complementan las explicaciones teóricas. En el texto y en los dibujos se tienen presentes las normas vigentes del momento y las prescripciones principales contra accidentes en carpintería. A cada sección le siguen unas preguntas de repaso que sirven para autoexaminarse y aumentar con ello el seguimiento del estudio.
