Parks and Protected Areas Glen Hvenegaard,Elizabeth Halpenny,Jill Bueddefeld,2021-09-03 Parks and protected areas provide important services to nature and society. Park managers make difficult decisions to achieve their diverse mandates, and need current, relevant, and rigorous information. However, effective use of research provided by social scientists, natural scientists, local people, or Indigenous people is an ongoing challenge. Through case studies, this book examines knowledge mobilization in parks and protected areas, with a focus on successes and failures, barriers and enablers, diverse theoretical frameworks, and structural innovations. This book embraces the generation and use of knowledge, especially natural science, social science, local knowledge, and Indigenous knowledge, in relation to policy, planning, and management of parks and protected areas.

Geologic Excursions from Fresno, California, and the Central Valley: A Tour of California's Iconic Geology Keith Daniel Putirka,2013 This volume presents field guides that span the breadth of central California's geology. The trips are associated with the 2013 GSA Cordilleran Section meeting, convened in Fresno, California, 18-25 May. The guides are to geologic localities that are not only iconic, but are also type examples of key geologic phenomena--Provided by publisher.

Catastrophic Landslides Stephen G. Evans,Jerome V. DeGraff,2002-01-01 This volume documents advances in our knowledge of catastrophic landslides, providing a worldwide survey of catastrophic landslide events. It draws on South America to illustrate dramatically the impact of these phenomena on human populations. The occurrence of catastrophic landslides, including site-specific insights, is shown through six events of the past 20 years. Several other chapters focus on the mechanisms involved with catastrophic landslides both in relation to geologic factors in a particular geographic area as well as to specific geologic processes.

Geological Monitoring Rob Young,Lisa Norby,2009 Geologic Monitoring is a practical, nontechnical guide for land managers, educators, and the public that synthesizes representative methods for monitoring short-term and long-term change in geologic features and landscapes. A prestigious group of subject-matter experts has carefully selected methods for monitoring sand dunes, caves and karst, rivers, geothermal features, glaciers, nearshore marine features, beaches and marshes, paleontological resources, permafrost, seismic activity, slope movements, and volcanic features and processes. Each chapter has an overview of the resource; summarizes features that could be monitored; describes methods for monitoring each feature ranging from low-cost, low-technology methods (that could be used for school groups) to higher cost, detailed monitoring methods requiring a high level of expertise; and presents one or more targeted case studies.--Publisher's description.
