Body Problems Ben Agger, 2019-07-30 *Body Problems* addresses the relationship between the body and society in a fast-food culture. Agger focuses on issues of food, exercise, work, dieting and eating disorders, fashion, bariatric and cosmetic surgery, and health. He addresses a growing, fundamental dilemma that we have ample access to abundant calories yet lead lifestyles and have jobs that for the most part do not enable us to expend those calories. He proposes solutions, both individual and structural, that involve re-orienting ourselves to exercise as play. This second edition has been updated to include a new chapter on food capitalism and a concluding passage arguing Cartesian dualism can be resolved by exercising vegans in ways that would thwart this food capitalism and give people immense control over their bodies, health, and well-being. The book is ideal for courses in introductory sociology, social problems, work, sociology of sport and leisure, gender, and health and illness.

Marathon Hal Higdon, 2005-09-03 Features instructions for runners of all ability levels on preparing for a marathon, including training schedules, advice on diet, defensive running strategies, and tips for staying motivated.

Summary of Jack Daniels's Daniels' Running Formula Everest Media, 2022-05-15T22:59:00Z Please note: This is a companion version & not the original book. Sample Book Insights: #1 In part I, I cover general thoughts about running and some basic principles of training that apply to developing middle- and long-distance runners. I also provide a summary of basic physiology of performance, and discuss how systems of the body are related to a runner's ability to train and race. #2 The transition from running for fitness to becoming a competitive athlete is not always easy. You must be careful to not increase your mileage, run more regularly, and add some quality work to your current routine too quickly, as this can lead to an injury. #3 The one question that should be answered when training is what the purpose of the session is. Some sound scientific principles do apply to everyone, but there are some ways of doing things that work better than others. #4 Each runner has their own personal strengths and weaknesses. You must figure out what works best for you, your goals, and your training. When I was coaching Lisa Martin, she got a positive feeling about doing fairly fast repetition 400s, despite the

marathon being her primary event.
