Tratado de Construcción. Lo que debe saber el proyectista Enrique Rodón, 1978-10 Este es un libro práctico para el estudiante y el proyectista que se inicia en la construcción, exponiendo con la mayor claridad posible, la forma de proceder en cada uno de los problemas constructivos que se le puedan presentar, indicándole para ello las fórmulas o métodos que debe emplear, los cuales han sido, la mayoría de ellos extraídos de libros especializados en las distintas materias, en alguno de los casos con bastante dificultad para llegar a las citadas fórmulas o métodos que debía emplear.

Física general ,2003 Un clásico entre los manuales de física universitaria, incluye todos los conocimientos que se requieren en física general. Con el objetivo de reforzar los conocimientos teóricos adquiridos en cada tema, se proponen a lo largo de todo el texto un total de 2.100 problemas cuya solución se encuentra en el libro problemas de física de los mismos autores y también publicado por Editorial Tébar.

EL CUERPO Y SUS MOVIMIENTOS. BASES CIENTÍFICAS Barbara A. Gowitzke, Morris Milner, 1999-12-17 El estudio del movimiento humano puede ser tan casual como sentarse en el porche y tomar nota mentalmente de las técnicas utilizadas por los corredores, o puede ser tan intenso como examinar los mecanismos de lesión por medio de una artroscopia. Puede centrarse en los patrones motores generales o estar limitados a los detalles de los elementos motores más minúsculos. Y, sea cual sea, el propósito de un estudio del movimiento humano, siempre suele haber aspectos científicos implicados. Este libro, que se inicia con una breve introducción que define sus objetivos, trata temas tan fundamentales como la estructura esquelética del cuerpo humano, la cinemática y la cinética, y temas tan complejos como la mecánica del movimiento, las fuerzas que posibilitan el movimiento, los mecanismos neuronales que controlan los elementos motores, incluyendo bases de neurofisiología, un estudio del sistema nervioso central, la organización global de los elementos del sistema neuromuscular, los neurorreceptores y la instrumentación.

Física para la ciencia y la tecnología. I Paul Allen Tipler, Gene Mosca, 2004 Durante casi 30 años, la Física para la Ciencia y la Tecnología de Paul A. Tipler ha sido una referencia obligada de los cursos de física universitarios por su impecable claridad y precisión. En esta edición, Tipler y su nuevo coautor Gene Mosca, desarrollan nuevas formas de exponer la física con la intención de no abrumar a los estudiantes sin simplificar en exceso el contenido. Aprovechándose de su extensa experiencia como profesor, Mosca ha revisado escrupulosa y críticamente todas las explicaciones y ejemplos del texto desde la perspectiva de los estudiantes de los primeros cursos universitarios. Esta nueva edición incorpora, además, muchas herramientas y técnicas pedagógicas que han demostrado ser efectivas en el Physics Education Research (PER). El resultado es un texto que mantiene su solidez tradicional pero que ofrece a los estudiantes las estrategias que necesitan para resolver los problemas y para conseguir una comprensión eficaz de los conceptos físicos. Para conveniencia de los profesores y alumnos, la 5a edición de la Física para la Ciencia y la Tecnología está disponible en dos ediciones simultáneas en dos y seis volúmenes, que pueden adquirirse por separado.

Física Joseph W. Kane, Morton M. Sternheim, 1989 La segunda edición de un libro de texto acompañado por el éxito proporciona a sus autores la rara ocasión de llevar a cabo lo que habían deseado hacer originalmente. Hemos aprovechado esta oportunidad para mejorar Física en muchos aspectos significativos, así como para actualizar su material donde resultara apropiado. La organización del libro sigue siendo la misma, tal como lo sigue siendo nuestro propósito básico de presentar la Física en una forma que la hiciera atractiva a una amplia diversidad de estudiantes, especialmente los que se inician en las ciencias de la vida. Como en la primera edición, este libro contiene algo más de lo que se puede tratar en un curso habitual, ya que hemos incluido todos los temas cubiertos habitualmente en los cursos de Física para estudiantes de primer ciclo de ciencias de la vida, más algún material poco usual.

Estática Fermín Herrero Arnaiz, Luis R. Rodríguez Cano, Luis A. Vega González, 2021-04-01 Los buenos libros de texto exigen introducir las nociones estudiadas en el momento de su utilización. Al final de cada capítulo se presentan problemas de diversa índole y dificultad, pero siempre relativos a los conceptos estudiados que abarcan muchos campos de la Estática;

en ellos, el lector se percatará cómo son necesarios los conocimientos adquiridos durante el curso: los presentes ejercicios son una excelente prueba de ello. Los ejercicios provienen en su mayoría de exámenes propuestos en los cursos académicos y han servido de piedra de toque para calibrar aquellos aspectos de la Estática que presentan más asperezas, en aras a la claridad de entendimiento de las diversas nociones de la misma.

Física para las ciencias de la vida Alan H. Cromer, 1981 Este libro tiene por finalidad proporcionar a los estudiantes de Biología, Farmacia, Medicina, Terapia física, Educación física y demás Ciencias afines, los conocimientos de Física que necesitan para su trabajo profesional. La selección del material se ha hecho pensando que fuese apropiado para las Ciencias de la vida y conveniente como curso de introducción a la Física. Estos criterios han producido algunos cambios en el acostumbrado énfasis de los temas, pero no han limitado la amplia visión de conjunto que se exige de un texto de Física general.
