Sustainable Smart Cities Marta Peris-Ortiz,Dag R. Bennett,Diana Pérez-Bustamante Yábar,2016-10-05 This volume provides the most current research on smart cities. Specifically, it focuses on the economic development and sustainability of smart cities and examines how to transform older industrial cities into sustainable smart cities. It aims to identify the role of the following elements in the creation and management of smart cities: • Citizen participation and empowerment • Value creation mechanisms • Public administration • Quality of life and sustainability • Democracy • ICT • Private initiatives and entrepreneurship Regardless of their size, all cities are ultimately agglomerations of people and institutions. Agglomeration economies make it possible to attain minimum efficiencies of scale in the organization and delivery of services. However, the economic benefits do not constitute the main advantage of a city. A city's status rests on three dimensions: (1) political impetus, which is the result of citizens' participation and the public administration's agenda; (2) applications derived from technological advances (especially in ICT); and (3) cooperation between public and private initiatives in business development and entrepreneurship. These three dimensions determine which resources are necessary to create smart cities. But a smart city, ideal in the way it channels and resolves technological, social and economic-growth issues, requires many additional elements to function at a high-performance level, such as culture (an environment that empowers and engages citizens) and physical infrastructure designed to foster competition and collaboration, encourage new ideas and actions, and set the stage for new business creation. Featuring contributions with models, tools and cases from around the world, this book will be a valuable resource for researchers, students, academics, professionals and policymakers interested in smart

cities.

Administración Integral Gabriel Baca Urbina, Nicolás Rodríguez Perego, Arturo Andrés Pacheco Espejel, Ana María Prieto Gallardo, Igor Antonio Rivera González, Jesús Manuel Reyes García, María Estela Alcántar Mariscal, Claudia Angélica Pinzón Sánchez, Maria Vittoria Bonotto, Gibrán Rivera González, Guillermo Pérez Vázquez, Gabriel Baca Cruz, 2014-10-21 Es un libro que no sólo habla del enfoque de procesos, también presenta el tema de la administración con un enfoque tradicional. El texto profundiza en el enfoque de procesos de manera firme, ya que los autores están convencidos de las bondades de esta orientación para beneficiar a la organización. En un mundo en el que el desempleo es global, los centros de enseñanza superior tienden a preparar a los egresados para que generen sus propios negocios y para que no dependan de que los contrate un mercado laboral cada vez más exiguo, con limitaciones de oferta de trabajo a los jóvenes profesionistas egresados de los centros de educación superior.
