**The Economic Value of Biodiversity** David Pearce,Dominic Moran,2013-11-05 Biodiversity loss is one of the major resource problems facing the world, and the policy options available are restricted by inappropriate economic tools which fail to capture the value of species and their variety. This study describes in non-technical terms how cost-benefit analysis techniques can be applied to species and species loss, and how they provide a measure of the efficiency of conservation measures. Only when conservation can be shown to pass such a basic economic test, the authors claim, will it be incorporated into policies.;David Pearce has also written Blueprint for a Green Economy.

Economics of Coastal and Water Resources: Valuing Environmental Functions R.K. Turner,I. J. Bateman,W.N. Adger,2013-04-18 Most of the chapters in this volume are authored by staff or associates of the Centre for Social and Economic Research on the Global Environment (CSERGE). CSERGE is a research centre sponsored by the UK Economic and Social Research Council (ESRC), which specialises in interdisciplinary work focussed on environmental management issues. We are grateful for the long term support that we have received from the ESRC. We would also like to acknowledge the efforts of Ann Dixon and SHin Pearce in the preparation of this volume. vii INTRODUCTION CHAPTER 1. ECOLOGICAL ECONOMICS AND COASTAL ZONE ECOSYSTEMS' VALUES: AN OVERVIEW. Turner, R. K. , Bateman, I. J. and Adger, W. N. 1. 1 Coastal zone pressure and sustainable management challenges Given the continued intensification of the process of globalisation - involving population growth, population density changes via urbanisation, industrial development, increased trade and capital flows, liberalisation of transnational corporation activity and lifestyle and attitudinal changes - coastal zones and their hydrologically linked catchment areas have come under heavy environmental pressure. The scale and extent of socio-economic activities have profound implications for the now coevolving natural and human systems and their complex interrelationships (Turner, Perrings and Folke, 1997). The consequences of this process of change manifest themselves across a range of spatial and temporal scales. Indeed the juxtaposition of different spatial, functional and temporal scales that is inherent in the catchment-coastal ecosystems-seas/oceans continuum poses particularly difficult challenges for both science and resource management/governance.

**The Great Barrier Reef** Ben Daley, 2014-07-17 The Great Barrier Reef is located along the coast of Queensland in north-east Australia and is the world's largest coral reef ecosystem. Designated a World Heritage Area, it has been subject to increasing pressures from tourism, fishing, pollution and climate change, and is now protected as a marine park. This book provides an original account of the environmental history of the Great Barrier Reef, based on extensive archival and oral history research. It documents and explains the main human impacts on the Great Barrier Reef since European settlement in the region, focusing particularly on the century from 1860 to 1960 which has not previously been fully documented, yet which was a period of unprecedented exploitation of the ecosystem and its resources. The book describes the main changes in coral reefs, islands and marine wildlife that resulted from those impacts. In more recent decades, human impacts on the Great Barrier Reef have spread, accelerated and intensified, with implications for current management and conservation practices. There is now better scientific understanding of the threats faced by the ecosystem. Yet these modern challenges occur against a background of historical levels of exploitation that is little-known, and that has reduced the ecosystem's resilience. The author provides a compelling narrative of how one of the world's most iconic and vulnerable ecosystems has been exploited and degraded, but also how some early conservation practices emerged.

**Stalking and Obsessive Behaviors in Everyday Life: Assessments of Victims and Perpetrators - ,2000**

Coral Reefs Peter F. Sale, 2021-01-01 An eye-opening introduction to the complexity, wonder, and vital roles of coral reefs Part memoir, part popular science, part call to action on climate change, the book makes a compelling case for why coral reefs deserve more attention. Sale's argument is as simple as it is powerful: as coral reefs go, so goes the rest of the planet. -- Bryan P. Galligan, *Commonweal* When mass coral bleaching and die-offs were first identified in the 1980s, and eventually linked to warming events, the scientific community was sure that such a dramatic and unambiguous signal would serve as a warning sign about the devastating effects of global warming. Instead, most people ignored that warning. Subsequent decades have witnessed yet more degradation. Reefs around the world have lost more than 50 percent of their living coral since the 1970s. In this book, distinguished marine ecologist Peter F. Sale imparts his passion for the unexpected beauty, complexity, and necessity of coral reefs. By placing reefs in the wider context of global climate change, Sale demonstrates how their decline is more than simply a one-off environmental tragedy, but rather an existential warning to humanity. He offers a reframing of the enormous challenge humanity faces as a noble venture to steer the planet into safe waters that might even retain some coral reefs.

**Benefit Transfer of Environmental and Resource Values** Robert J. Johnston, John Rolfe, Randall S. Rosenberger, Roy Brouwer, 2015-06-02 This book provides a comprehensive review of environmental benefit transfer methods, issues and challenges, covering topics relevant to researchers and practitioners. Early chapters provide accessible introductory

materials suitable for non-economists. These chapters also detail how benefit transfer is used within the policy process. Later chapters cover more advanced topics suited to valuation researchers, graduate students and those with similar knowledge of economic and statistical theory and methods. This book provides the most complete coverage of environmental benefit transfer methods available in a single location. The book targets a wide audience, including undergraduate and graduate students, practitioners in economics and other disciplines looking for a one-stop handbook covering benefit transfer topics and those who wish to apply or evaluate benefit transfer methods. It is designed for those both with and without training in economics

The Economics of Tourism Mike J. Stabler, Andreas Papatheodorou, M. Thea Sinclair, 2009-12-16 This new edition of The Economics of Tourism reflects the tremendous changes that have occurred in the tourism sector in the last twelve years. It recognizes that the nature of tourism demand and supply is being transformed by innovations in information communication technologies, market liberalization and climate change. Paralleling this, there is much greater interest in the study of tourism by both students and researchers in mainstream economics. The text is now in four parts covering: demand; supply; national, regional and international matters and environmental issues. The concluding chapter appraises the state of the economic research into tourism. The increased interest in tourism has engendered the development of new methods of analysis and the refinement of established ones. Accordingly, the book has been extensively restructured, revised and expanded with two new chapters: chapter six of the first edition is now broken down into two and a new chapter has been added on environmental issues to take account of new developments, critically review the associated literature and consider future trends in tourism economics research. The reader-friendliness of the book has also been enhanced in various ways, such as the extensive chapter cross-referencing to refresh the reader's memory and the inclusion of a detailed list of abbreviations. The Economics of Tourism will continue to make accessible for the non-specialist, the application and relevance of economics to tourism. Extensively revised and updated, including research and case studies the textbook will be an indispensable resource for both students and researchers.

**Maritime Clusters and the Ocean Economy** Peter B. Myles, 2017-09-07 Over the last decade the concept of clustering has become a central idea for analyzing the competitiveness of nations, industries and firms. This book shows how the cluster concept can be usefully applied to the study of maritime activities. Such activities, including shipping, shipbuilding and port and maritime services, are clearly geographically concentrated in a number of maritime clusters. However, as the author shows, these are having to compete with other uses of the coasts and oceans including capture fisheries, marine aquaculture, offshore energy and tourism. Sound governance and planning is therefore required to manage the competing claims for ocean space. The book shows how competing industries and other stakeholders can cooperate and benefit from an integrated approach to the development of maritime clusters. The contribution of approaches such as integrated coastal zone

management and innovations such as ocean business councils, as well as coordinated networks of maritime clusters are reviewed. Case studies are included from around the world, including detailed examples of the development of the Nelson Mandela Bay Maritime Cluster in South Africa and from Poland in the Baltic Sea.

Environmental and Economic Issues in Forestry Susan Shen,Arnoldo Contreras-Hermosilla,1995-01-01 World Bank Technical Paper No. 281. Provides an overview of environmentally related priority issues in Asian forestry and contributes to the critical work of understanding the complex dynamics of those issues.

**Economic Valuation of Biodiversity** Bartosz Bartkowski,2017-05-18 This book provides an ecological economic perspective on the value of diversity in ecosystems. Combining insights from various sub-disciplines of ecology and environmental/ecological economics the author constructs a conceptual framework which identifies the ways in which biodiversity influences human well-being are identified and offers a novel, unifying perspective on the economic value of biodiversity.

*State of the Great Barrier Reef World Heritage Area Workshop* David Raymond Wachenfeld,Jamie Oliver,Kim Davis,1997

*Protected Area Governance and Management* Graeme L. Worboys,Michael Lockwood,Ashish Kothari,Sue Feary,Ian Pulsford,2015-04-08 Protected Area Governance and Management presents a compendium of original text, case studies and examples from across the world, by drawing on the literature, and on the knowledge and experience of those involved in protected areas. The book synthesises current knowledge and cutting-edge thinking from the diverse branches of practice and learning relevant to protected area governance and management. It is intended as an investment in the skills and competencies of people and consequently, the effective governance and management of protected areas for which they are responsible, now and into the future. The global success of the protected area concept lies in its shared vision to protect natural and cultural heritage for the long term, and organisations such as International Union for the Conservation of Nature

are a unifying force in this regard. Nonetheless, protected areas are a socio-political phenomenon and the ways that nations understand, govern and manage them is always open to contest and debate. The book aims to enlighten, educate and above all to challenge readers to think deeply about protected areas—their future and their past, as well as their present. The book has been compiled by 169 authors and deals with all aspects of protected area governance and management. It provides information to support capacity development training of protected area field officers, managers in charge and executive level managers.

Coastal Resources Economics and Ecosystem Valuation J.Walter Milon, Sergio Alvarez, 2019-12-12 The practical importance of economic valuation information can hardly be overstated. Coastal and marine resource policy planning and management benefit from complete information on the impact of policy decisions. In addition, proper accounting of the impacts of these policy decisions is necessary for benefit-cost analyses and measurements of economic growth over time. This special issue focuses on economic valuation of coastal and marine ecosystem services. Economic valuation provides methods and techniques to determine how changes in coastal and marine ecosystem services can be translated into benefits and costs to society. Economic values play an important role in everyday life and provide useful information about human welfare and happiness. Valuation provides a consistent framework to understand human-nature interactions across a broad range of coastal and marine resources, and to evaluate the costs and benefits of these interactions. The focus on ecosystem services provides new research on this perspective of human-nature interactions that has profoundly changed the academic dialogue on natural systems, but has had limited impact on public dialogue and the policy process.

**The Economics of Tourism Destinations** Norbert Vanhove, 2022-06-19 Revised and updated, the fourth edition of *The Economics of Tourism Destinations* provides a guide to the economic aspects of tourism for students and practitioners to decipher the methods of measurement of supply, demand, trends and impacts as well as the role of tourism in development strategy for destinations and regional development. Each chapter combines theory and practice, and international case studies are provided. New to this edition: Three brand new chapters on overtourism, terrorism and pandemics, and sustainable development, covering the importance of risk management and sustainable strategy in relation to tourism management. New content on climate change, Airbnb, the impact of events and sustainable tourism development. Pedagogical features: new case studies, discussion questions and student activities to show theory in practice and encourage reflection on the content. Updated data throughout and reference to important new literature. Combining macro and micro aspects of economics to the tourism destination, this book is an invaluable resource for students studying this topic.

**The Great Barrier Reef** Pat Hutchings, Michael Kingsford, Ove Hoegh-Guldberg, 2019-02-01 The iconic and beautiful Great Barrier Reef Marine Park is home to one of the most diverse ecosystems in the world. With contributions from

international experts, this timely and fully updated second edition of The Great Barrier Reef describes the animals, plants and other organisms of the reef, as well as the biological, chemical and physical processes that influence them. It contains new chapters on shelf slopes and fisheries and addresses pressing issues such as climate change, ocean acidification, coral bleaching and disease, and invasive species. The Great Barrier Reef is a must-read for the interested reef tourist, student, researcher and environmental manager. While it has an Australian focus, it can equally be used as a reference text for most Indo-Pacific coral reefs.

*Environmental Economics and Investment Assessment II* K. Aravossis, C. A. Brebbia, N. Gomez, 2008 The current emphasis on sustainable development is a consequence of the general awareness of the need to solve numerous environmental problems resulting from our modern society. This book addresses the topic of investment assessment and environmental economics in an integrated way.
