Global Financial Stability Report, April 2014 International Monetary Fund, 2014-04-09 The April 2014 Global Financial Stability Report finds that, despite much progress, the global financial system remains in a transitional period with stability conditions far from normal. Advanced and emerging market economies alike need to make a successful shift from liquidity- to growth-driven markets, which will require a number of elements, including a normalization of U.S. monetary policy; financial rebalancing in emerging markets; further progress in the euro area integration; and continued implementation of “Abenomics” in Japan. This report also examines how changes in the investor base and financial deepening affect emerging market economies as well as looks at the issue of banks considered too important to fail, providing new estimates of the implicit funding subsidy these banks receive.

Dimensions of Development Susan Vincent,2012-03-07 Dimensions of Development traces the 'development' of Allpachico, a village in the Peruvian central highlands. Susan Vincent examines four aid projects in the area, each following distinct international trends, that took place between 1984 and 2008 within the context of wider state and global political and economic systems. A unique historical ethnography, Dimensions of Development illustrates how state and NGO projects have drawn Allpachiqueños deeper into capitalism and have brought about challenges to the local political structure, the comunidad campesina. While highlighting the continual reorganization of the local population into new groups, Vincent also reveals why the comunidad remains the group's preferred form of representation.
