Álgebra lineal con métodos elementales. 3a. Edición MERINO GONZALEZ, LUIS MIGUEL,SANTOS ALAEZ, EVANGELINA,2021-08-20 El Álgebra Lineal es una materia habitual en la mayor parte de los estudios técnicos y científicos, y es también habitual que su presentación al alumno sea o demasiado abstracta, olvidando la necesidad de insistir en la resolución de ejercicios, o un amplio recetario en el que se obvia la justificación de los métodos utilizados. En este texto se hace una presentación en la que, sin renunciar al formalismo matemático y a la inclusión de la demostración de cada resultado, la materia tiene un marcado carácter práctico y se llega en todos los casos a adquirir técnicas de cálculo efectivo. Las transformaciones elementales de filas y columnas de matrices juegan, en este sentido, un importante papel y se usan no sólo como herramienta en la resolución de ejercicios sino en el centro mismo de la teoría, formando parte de muchas de las demostraciones. Esto, junto con la abundancia de ejemplos, que ayudan a la comprensión de las definiciones y a la asimilación de los métodos de cálculo y los más de 100 ejercicios resueltos en detalle lo convierten en un libro fácilmente accesible para el alumno. Luis Merino González y Evangelina Santos Aláez son profesores titulares del Departamento de Álgebra de la Universidad de Granada. Nota a la tercera edición Este texto nació de nuestro interés por mostrar que un enfoque más práctico y constructivo del Álgebra Lineal no era incompatible con el rigor matemático. A punto de cumplir los 25 años de existencia, el ya largo recorrido de este manual supera nuestras previsiones e ilusiones más optimistas de aquel momento. Nos satisface enormemente haber podido influir en alguna medida en la formación de muchos estudiantes, algunos de ellos ya compañeros docentes. En estos años hemos desarrollado más la parte de ejercicios, publicando en la web esquemas de resolución razonados y con ejemplos, primero a través de una página facebook y posteriormente también en una web propia. Creemos que es el formato más adecuado, en estos tiempos, para un material complementario que sigue aumentando y evolucionando sin la atadura del texto impreso. También muchos compañeros han colaborado aportando sus correcciones y sugerencias o, como el profesor Eduardo Aguirre de la UCM, publicando en la web un material complementario a nuestro texto, muy útil en determinados grados. Agradecemos a cada nueva generación de lectores que sigan confiando en él y recomendándolo a las siguientes. Los autores

*Algebra Lineal. Apuntes de teoría y ejercicios resueltos* José Manuel Salazar,2010-11 El presente libro intenta ser una guía práctica para los alumnos de primer curso de las carreras científicas en su estudio del cálculo. Para ello se han incluido resúmenes teóricos y una gran cantidad de ejercicios resueltos. Esta obra es recomendable como material de apoyo en la resolución de problemas, pudiendo emplearse como texto básico, sin olvidar que la parte teórica incluye demostraciones, cuya consulta se deja al criterio del lector en cualquier texto estándar. Los contenidos quedan estructurados de la siguiente manera: cada capítulo comienza con un resumen teórico de la materia a tratar, seguido de una serie de problemas propuestos para el alumno. Capítulo 1, matrices, determinantes, cálculo de rangos, sistemas de ecuaciones lineales, método

de Gauss..... Capítulo 2 y 3, estructuras del Álgebra lineal, los espacios vectoriales y aplicaciones lineales. Capítulo 4, endomorfismos y las formas canónicas de Jordan. Capítulo 5, sistemas de ecuaciones diferenciales de primer orden de coeficientes constantes. Capítulo 6, productos escalar en el espacio vectorial, estudio de los desarrollos de Fournier. Capítulo 7, soluciones de la mayor parte de los problemas propuestos a lo largo del libro.
