Stem Cell Therapy for Organ Failure Indumathi Somasundaram, 2015-01-02 The book "STEM CELL THERAPY FOR ORGAN FAILURES" edited by Dr. S. Indumathi demonstrates the In Vitro and In vivo therapeutic strategies and applications of pre- and post-natal stem cells for treating the failures of various organ systems of our body in a wide perspective. It explores the past, present and the futuristic approach of the exciting field of stem cells and its intriguing properties involved in tissue repair and regeneration. The prime focus of this volume is to unravel the basic, advanced, therapeutic and translational approaches put-forth so far in the field of stem cells and regenerative medicine at research, pre-clinical and clinical levels. Stem cells has ushered in widespread interest and exciting possibilities for cell based therapies, albeit failures do prevail and small uncontrolled phase I/II studies are only signals generating, rather than definite proof of concept thereby limiting its applicability in curative therapeutics. Despite certain initiatives and meticulous untiring efforts, bringing this basic bench side research into advanced transitional bedside remained a challenge. Thus, this book embarked upon the expanding researches in these areas that seem decisive in improvising regenerative medical therapeutics, thereby leading to further path-breaking studies that cure all health challenges facing mankind. Overall, this book reveals the imperativeness of various stem cell sources and its utility in curative therapeutics.

Personalized Health and Precision Medicine in Practice Luca Chiapperino, Francesco Panese, Séverine Louvel, Sylvain Besle, 2024-02-26 So-called personalized health and precision medicine consist of a plethora of distinct endeavors. Ranging from pharmacogenomics to big data medicine, these endeavors are set out to tailor treatment and prevention to different combinations of data on the biological, behavioral, social, and environmental determinants of health. Currently reaching the trial of implementation across a diverse range of local and national contexts, these innovations call for a thorough empirical scrutiny of the normative, practical, and technical reconfigurations that they engender. Personalized/precision approaches to medicine demand substantive, normative work that consists in reforming social contracts in healthcare, and in ensuring a consistent commitment to change from both institutional actors and citizens.

LGBT Populations and Cancer in the Global Context Ulrike Boehmer, Gabriele Dennert, 2022-08-21 Lesbian, Gay, Bisexual, and Transgender (LGBT) also known as sexual and gender minority (SGM) populations have been the focus of global attention. Most importantly, LGBT populations have been addressed in the context of human rights in multiple reports and other activities by the United Nations and other international organizations. There is great variation among countries in the recognition of LGBT individuals' human rights. A global focus on LGBT populations' health is still limited, with the notable exception of HIV research. This book on LGBT populations and cancer in the global context is, therefore, an important step in that it will broaden the focus on LGBT populations' health. Globally, cancer is the second leading cause of death. Cancer morbidity and mortality are increasing disproportionately among populations in lower-income countries. A review conducted by the World Health Organization (WHO) found that of the 82% of member states (158) countries, only 35% of the national cancer control plans addresses vulnerable population, including LGBT populations. These findings reflect an increasing awareness about equity when addressing cancer prevention and control, including LGBT populations. This book addresses LGBT populations' cancer burden across countries that range from high- to low-income countries to support efforts in diverse countries that are working towards reducing LGBT populations' cancer burden. It documents place-specific challenges that impede progress towards reducing the LGBT cancer burden as well as critically assesses the variation in cancer control efforts that target LGBT populations and cancer to support progress at a global scale. This book includes six sections that cover the six WHO regions, with each chapter written by an author from the specific region s/he is covering. Each chapter makes use of a template that contextualizes the region, local data collection/availability, risk factors, cancer

prevention, detection, diagnosis, treatment, and survivorship.
