The History of Ptolemy's Star Catalogue Gerd Graßhoff, 2013-03-07 Ptolemy's Almagest shares with Euclid's Elements the glory of being the scientific text longest in use. From its conception in the second century up to the late Renaissance, this work determined astronomy as a science. During this time the Almagest was not only a work on astronomy; the subject was defined as what is described in the Almagest. The cautious emancipation of the late middle ages and the revolutionary creation of the new science in the 16th century are not conceivable without reference to the Almagest. This text lifted European astronomy to the high standard of knowledge on which the new science flourished. Before, the Ptolemaic models of the orbits of the sun, the moon, and the planets had been refined by Arabic astronomers. They provided the structural elements with which Copernicus and Kepler ushered in the era of modern astronomy. The Almagest survived the destruction of its epicyclic representation of the planetary orbits in the conceptual traces left behind in the theories of its successors. The clear separation of the sidereal from the tropical year, the celestial coordinate systems, the concepts of time, the forms of the constellations, and brightness classifications of celestial objects are, among many other things, still part of the astronomical canon even today.

A History of the World in 12 Maps Jerry Brotton, 2014-10-28 A New York Times Bestseller "Maps allow the armchair traveler to roam the world, the diplomat to argue his points, the ruler to administer his country, the warrior to plan his campaigns and the propagandist to boost his cause... rich and beautiful." - Wall Street Journal Throughout history, maps have been fundamental in shaping our view of the world, and our place in it. But far from being purely scientific objects, maps of the world are unavoidably ideological and subjective, intimately bound up with the systems of power and authority of particular times and places. Mapmakers do not simply represent the world, they construct it out of the ideas of their age. In this scintillating book, Jerry Brotton examines the significance of 12 maps - from the almost mystical representations of ancient history to the satellite-derived imagery of today. He vividly recreates the environments and circumstances in which each of the maps was made, showing how each conveys a highly individual view of the world. Brotton shows how each of his maps both influenced and reflected contemporary events and how, by considering it in all its nuances and omissions, we can better understand the world that produced it. Although the way we map our surroundings is more precise than ever before, Brotton argues that maps today are no more definitive or objective than they have ever been. Readers of this beautifully

illustrated and masterfully argued book will never look at a map in quite the same way again. "A fascinating and panoramic new history of the cartographer's art." - The Guardian "The intellectual background to these images is conveyed with beguiling erudition.... There is nothing more subversive than a map." - The Spectator "A mesmerizing and beautifully illustrated book." —The Telegraph

The Oxford World History of Empire Peter Fibiger Bang,Christopher Alan Bayly,Walter Scheidel,2021 This is the first world history of empire, reaching from the third millennium BCE to the present. By combining synthetic surveys, thematic comparative essays, and numerous chapters on specific empires, its two volumes provide unparalleled coverage of imperialism throughout history and across continents, from Asia to Europe and from Africa to the Americas. Only a few decades ago empire was believed to be a thing of the past; now it is clear that it has been and remains one of the most enduring forms of political organization and power. We cannot understand the dynamics and resilience of empire without moving decisively beyond the study of individual cases or particular periods, such as the relatively short age of European colonialism. The history of empire, as these volumes amply demonstrate, needs to be drawn on the much broader canvas of global history. Volume Two: The History of Empires tracks the protean history of political domination from the very beginnings of state formation in the Bronze Age up to the present. Case studies deal with the full range of the historical experience of empire, from the realms of the Achaemenids and Asoka to the empires of Mali and Songhay, and from ancient

Rome and China to the Mughals, American settler colonialism, and the Soviet Union. Forty-five chapters detailing the history of individual empires are tied together by a set of global synthesizing surveys that structure the world history of empire into eight chronological phases.

Wonders and Rarities Travis Zadeh, 2023-01-10 "As Zadeh concludes, reformers and modernists have closed the rich and varied archive revealed in *Wonders and Rarities*...In this beautifully written and engaging text, Zadeh takes his readers back to the world of surprise and enchantment that preceded this closure."—Malise Ruthven, *Financial Times* "The wonders and curiosities of the Islamic imagination await discovery by a new generation of readers in this superb and very enjoyable book by Travis Zadeh."—Orhan Pamuk, winner of the Nobel Prize in Literature The astonishing biography of one of the world's most influential books. During the thirteenth century, the Persian naturalist and judge Zakariyyā' Qazwīnī authored what became one of the most influential works of natural history in the world: *Wonders and Rarities*. Exploring the dazzling movements of the stars above, the strange minutiae of the minerals beneath the earth, and everything in between, Qazwīnī offered a captivating account of the cosmos. With fine paintings and leading science, *Wonders and Rarities* inspired generations as it traveled through madrasas and courts, unveiling the magical powers of nature. Yet after circulating for centuries, first in Arabic and Persian, then in Turkish and Urdu, Qazwīnī's compendium eventually came to stand as a strange, if beautiful, emblem of medieval ignorance. Restoring Qazwīnī to his place as a herald of the rare and astonishing, Travis Zadeh dramatically revises the place of wonder in the history of Islamic philosophy, science, and literature. From the

Mongol conquests to the rise of European imperialism and Islamic reform, Zadeh shows, wonder provided an enduring way to conceive of the world—at once constituting an affective reaction, an aesthetic stance, a performance of piety, and a cognitive state. Yet through the course of colonial modernity, Qazwīnī's universe of marvels helped advance the notion that Muslims lived in a timeless world of superstition and enchantment, unaware of the western hemisphere or the earth's rotation around the sun. Recovering Qazwīnī's ideas and his reception, Zadeh invites us into a forgotten world of thought, where wonder mastered the senses through the power of reason and the pleasure of contemplation.

The Marvel of Maps Francesca Fiorani, 2005-01-01 Among the most beautiful and compelling works of Renaissance art, painted maps adorned the halls and galleries of princely palaces. This book is the first to discuss in detail the three-dimensional display of these painted map cycles and their full meaning in Renaissance culture. Art historian Francesca Fiorani focuses on two of the most significant and marvelous surviving Italian map murals--the Guardaroba Nuova of the Palazzo Vecchio, Florence, commissioned by Duke Cosimo de' Medici, and the Gallery of Maps in the Vatican, commissioned by Pope Gregory XIII. Both cycles were not only pioneering cartographic enterprises but also powerful political and religious images. Presenting an original interpretation of the interaction between art, science, politics, and religion in Renaissance culture, the book also offers fresh insights into the Medici and papal courts.

The Politics of Memory Raingard Esser, 2012-02-17 The Eighty Years' War and the establishment of two states in the Low Countries inaugurated the publication of numerous texts to support a distinct Northern and Southern identity. This study analyses urban and regional chorographies written both in the North and in the South in the seventeenth century. It examines different strategies that chorographers developed to make sense of the recent and more remote past. It also looks at the development of different historiographical traditions in the Protestant North and the Catholic South and thus contributes to the current research interest in the history of historiography, cultures of memory and identity formation.

The Venetian Discovery of America Elizabeth Horodowich, 2018-09-06 Few Renaissance Venetians saw the New World with their own eyes. As the print capital of early modern Europe, however, Venice developed a unique relationship to the Americas. Venetian editors, mapmakers, translators, writers, and cosmographers represented the New World at times as a place that the city's mariners had discovered before the Spanish, a world linked to Marco Polo's China, or another version of Venice, especially in the case of Tenochtitlan. Elizabeth Horodowich explores these various and distinctive modes of imagining the New World, including Venetian rhetorics of 'firstness', similitude, othering, comparison, and simultaneity generated through forms of textual and visual pastiche that linked the wider world to the Venetian lagoon. These wide-ranging stances allowed Venetians to argue for their different but equivalent participation in the Age of Encounters. Whereas historians have traditionally focused on the Spanish conquest and colonization of the New World, and the Dutch and English mapping of it, they have ignored the wide circulation of Venetian Americana. Horodowich demonstrates how with their printed texts and maps, Venetian newsmongers embraced a fertile tension between the distant and the close. In doing so, they played a crucial yet heretofore unrecognized role in the invention of America.

The Sea in World History Stephen K. Stein, 2017-04-24 This two-volume set documents the essential role of the sea and maritime activity across history, from travel and food production to commerce and conquest. In all eras, water transport has served as the cheapest and most efficient means of moving cargo and people over any significant distance. Only relatively recently have railroads and aircraft provided an alternative. Most of the world's bulk goods continue to travel primarily by ship over water. Even today, 95 percent of the cargo that enters and leaves the United States does so by ship. Similarly, people around the world rely on the sea for food, and in recent years, the sea has become an important source of oil and other resources, with the longterm effects of our continuing efforts to extract resources from the sea further highlighting environmental concerns that range from pollution to the exhaustion of fish stocks. This chronologically organized two-volume reference addresses the history of the sea, beginning with ancient civilizations (4000 to 1000 BCE) and ending with the modern era (1945 to the present day). Each of the eight chapters is further broken down into sections that focus on specific nations or regions, offering detailed descriptions of that area of the world and shorter entries on specific topics, individuals, and events. The book spans maritime history, covering major seafaring peoples and nations; famous explorers, travelers, and

commanders; events, battles, and wars; key technologies, including famous ships; important processes and ongoing events, such as piracy and the slave trade; and more. Readers will benefit from dozens of primary source documents—ranging from ancient Egyptian tales of seafaring to texts by renowned travelers like Marco Polo, Zheng He, and Ibn Battuta—that provide firsthand accounts from the age of discovery as well as accounts of battle from World War I and II and more modern accounts of the sea.
