New Trends In Statistical Physics: Festschrift In Honor Of Leopoldo Garcia-colin's 80th Birthday Alfredo Macias, Leonardo Dagdug, 2010-05-20 This volume presents a collection of original and peer-reviewed articles related with the applications of Statistical Physics dedicated to Professor Dr Leopoldo García-Colín, in commemoration of his 80th birthday in 2010. Professor García-Colín has worked in many different fields of statistical physics, and has applied it to biological physics, solid state physics, relativity and cosmology. These are pioneering works of Prof García-Colín involved in all various fields which have their roots in Mexico. His influence is found in each of these works that cover a wide range of topics including thermodynamics, statistical mechanics and kinetic theory applied to biological systems, cosmology and condensed matter, among others. Papers contributed by important experts in the field, such as J Lebowitz, as well as the latest classical applications of statistical physics can be found in this volume.

Termodinámica técnica José Segura Clavell, 2021-01-10 Este libro se ha escrito pensando fundamentalmente en los alumnos de la especialidad de máquinas que cursan su carrera en las Escuelas de Náutica. Tales estudios, a raíz de disposiciones legales de los últimos años, han adquirido nivel universitario, por lo que las diferentes disciplinas soporte de la especialidad de máquinas requieren de un nuevo y razonado enfoque. Ahora bien, aún cuando la motivación del libro es la antedicha, su contenido y orientación metodológica le confieren un más amplio espectro de utilización, de forma que podrá ser utilizado como texto o bien como obra de consulta por aquellos que cursan carreras de orientación técnica, como pueden ser las de Ingeniería Industrial, Naval o Aeronáutica o las licenciaturas en ciencias para las especialidades de Física o de Química Industrial.

Developments in Mathematical and Experimental Physics Alfredo Macias, Francisco Uribe, Enrique Diaz, 2012-12-06 The FIRST MEXICAN MEETING ON MATHEMATICAL AND EXPERIMENTAL PHYSICS was held at EL COLEGIO NACIONAL in Mexico City, Mexico, from September 10 to 14, 2001. This event consisted of the LEOPOLDO GARCÍA-COLÍN SCHERER Medal Lecture, delivered by Prof. Nicholas G. van Kampen, a series of plenary talks by Leopoldo Garcia-Colin, Giinter Nimtz, Luis F. Rodriguez, Ruoon Barrera, and Donald Saari, and of three parallel symposia, namely, Cosmology and Gravitation,

Statistical Physics and Beyond, and Hydrodynamics and Dynamical Systems. The response from the Physics community was enthusiastic, with over 200 participants and around 80 speakers, from all over the world: USA, Canada, Mexico, Germany, France, Holland, United Kingdom, Switzerland, Spain, and Hungary. The main aim of the conference is to provide a scenario to Mexican researchers on the topics of Mathematical and Experimental Physics in order to keep them in contact with work going on in other parts of the world and at the same time to motivate and support the young and mid career researchers from our country. To achieve this goal, we decided to invite the most distinguished experts in the subjects of the conference as lecturers and to give the opportunity to young scientists to communicate the results of their work. The plan is to celebrate this international endeavor every three years.

Termodinámica clásica. Protocolos experimentales sobre primera y segunda leyes, y sobre potenciales selectos Rodolfo Acevedo Chávez, 2023-05-09 La termodinámica puede definirse como el tema de la Física que estudia los procesos en los que se transfiere energía como calor y como trabajo. Sabemos que se efectúa trabajo cuando la energía se transfiere de un cuerpo a otro por medios mecánicos. El calor es una transferencia de energía de un cuerpo a un segundo cuerpo que está a menor temperatura. O sea, el calor es muy semejante al trabajo.

Coefficientes de respuesta en sistemas termodinámicos Rodolfo Acevedo Chávez, María Eugenia Herminia Costas Basin, 2025-01-23 La obra presente está constituida por 30 protocolos experimentales que abordan sistemas sólidos, líquidos y gases, y que muestran resultados experimentales de coeficientes de respuesta tanto de tipo mecánico, como eléctrico e incluso térmico. Aspira a que la persona interesada perciba el carácter tangible del tema coeficientes de respuesta, así como

de su estudio diverso y aplicaciones tecnológicas variadas. Establece también las bases conceptuales del estudio del tema conectado íntimamente, y que es el de las ecuaciones de estado.

Equilibrio y Transiciones de Fases Rodolfo Acevedo Chávez, María Eugenia Costas Basin, 2024-03-31 Con la intención de continuar en la contribución a la formación académica elemental de los estudiantes en el campo de la termodinámica clásica, se consideró pertinente elaborar un programa accesible de revisión experimental básica sobre el tema de equilibrios y transiciones de fases en sistemas monocomponentes. El perfil del trabajo es en forma premeditada eminentemente de carácter metodológico-experimental. Es tarea previa del lector interesado el dominio de los conceptos y fundamentos sobre el tema que aquí se explora. Por tanto, en cada uno de los protocolos que conforman el trabajo aquí presentado, se plantea de inicio el tema, su finalidad, la infraestructura requerida, la técnica por seguir, el tratamiento de la información obtenida (y en su caso la discusión), y el ejemplo-demostración correspondiente, producto de la realización experimental personal por los autores. Cada uno de los protocolos es autocontenido. En la realización de los estudios experimentales que aquí se demuestran, se empleó infraestructura experimental verificada previamente tanto en fábrica como, en casos específicos, en laboratorios especializados en la verificación y certificación instrumenta

Investigación e información científicas en México Ruy Pérez-Tamayo, 1988 Un distinguido grupo de científicos mexicanos, representantes de diversas áreas de la ciencia, despliegan una visión multidisciplinaria sobre el uso y la información del producto de su labor de investigación. Se trata de una visión que no sólo aborda las peculiaridades y problemas de la información científica en México, sino que también abre la posibilidad de soluciones interesantes e impostergables.

Biocomplejidad Moisés Villegas, Lorena Caballero, Eduardo Vizcaya, 2019-06-01 Por cientos de años se han gastado ríos de tinta en escribir definiciones o caracterizaciones de lo que es la vida. No hay hasta hoy una definición ampliamente aceptada. Lo que sí comienza a ser aceptado, con ímpetu creciente, es un novedoso paradigma científico que propone que de componentes no vivos; pero propiamente dispuestos en un orden espacio-temporal preciso en el que existen entre ellos interacciones de naturaleza no-lineal, va a emerger colectivamente una propiedad común que es lo que conocemos como vida. Entonces lo vivo es emergente: pero no nos engañemos. Este paradigma tiene sus detractores que pugnarán por argumentar que las moléculas por separado podrían tener vida e inclusive personalidad propia, por ejemplo, un gen que es egoísta y que usa a su favor toda la maquinaria celular para su propósito que es prevalecer y perpetuarse. Este tipo de visión llamada comúnmente reduccionismo se enfrenta a otra visión moderna que es la de los sistemas complejos. Los sistemas complejos serían aquellos formados por múltiples componentes en interacción y en los cuales emergen propiedades en escalas de tiempo y espacio diferentes a la escala de los componentes. Las propiedades de dichos sistemas son lo que podríamos llamar complejidad y cuando los sistemas complejos son de naturaleza biológica, sus propiedades en conjunto

suelen llamarse biocomplejidad. Por ello, la biocomplejidad es el estudio de interacciones de componentes, ya sean genes, proteínas, máquinas moleculares, células con otras células, tejidos con otros tejidos, órganos con otros órganos, individuos con otros individuos e interacciones entre especies y medioambiente en ensambles ecológicos. Se trata así de jerarquías de interacciones modulares a las cuales, además debemos agregar la conjetura de que operan en estado crítico, es decir, en las cercanías de las transiciones de fase orden-desorden. El lector tiene frente a sí, un libro cuyos autores exploran este nuevo paradigma biológico con la loable esperanza de brindar un texto ameno, con autoridad y generoso por tratarse de un texto gratuito en acceso abierto.
