Future Tense Martha Brockenbrough,2024-03-19 Human history has always been shaped by technology, but AI is like no technology that has come before it. Unlike the wheel, combustion engines, or electricity, AI does the thing that humans do best: think. While AI hasn't reproduced the marvelously complex human brain, it has been able to accomplish astonishing things. AI has defeated our players at games like chess, Go, and Jeopardy!. It's learned to recognize objects and speech. It can create art and music. It's even allowed grieving people to feel as though they were talking with their dead loved ones. On the flip side, it's put innocent people in jail, manipulated the emotions of social media users, and tricked people into believing untrue things. In this non-fiction book for teens, acclaimed author and teacher Martha Brockenbrough guides readers through the development of this world-changing technology, exploring how AI has touched every corner of our world, including education, healthcare, work, politics, war, international relations, and even romance. This is essential reading for anyone who wants to understand how artificial intelligence got here, how to make the best use of it, and how we can expect it to transform our lives.

Regardless of whether you are an aspiring student of AI, an entrepreneur, a policymaker, a senior executive, an investor, or a decision-maker, this book is for you. AI Rising will provide you with enough information and perspective to form your own opinion about AI and its applications in business,

Artificial Intelligence, Human Agency and the Educational Leader Rosemary Papa, Karen Moran Jackson, 2021-12-06 This book includes contributions by scholars from a variety of disciplines, the dialogue and discourse on how AI (artificial intelligence) development includes and/or excludes pedagogical educational learning theories focused on the learner. A call from Educational Leaders Without Borders (ELWB) was issued to scholars from across the globe who were asked to write a vignette described as an evocative description or account on how education leaders envision education in 2051 and A.I. beyond mere product purchase. These vignettes should engage us in questions as to how the development and use of AI technologies are shaped. As educators who believe education should be established on social justice beliefs and practices, our review of literature shows there are no books addressing the complexities of A.I. development and the role of educators. The futuristic element is unique in its approach to imagine a socially just better world in which to inspire educators. This unique feature encourages creativity in how one addresses the call to imagine a future world and our role as educators in that world.

From Incremental to Exponential Vivek Wadhwa, Ismail Amla, Alex Salkever, 2020-10-06 “This timely book reminds us that innovation is agnostic about where it's created.” —Satya Nadella, CEO, Microsoft Over and over, we see big legacy businesses getting beaten to the punch by energetic little start-ups. It seems like innovation can come from only the bottom up or from the outside in. But tech experts Vivek Wadhwa and Ismail Amla are here to tell you that “big equals slow and stodgy” is a myth. Based on decades of experience working with both the world's leading brands and disruptive start-ups, this book explores the opportunity legacy companies have to create new markets, supercharge growth, and remake their businesses by combining the mindset and tool belt of start-ups with the benefits of incumbency: boatloads of customer data, decades of brand equity, robust distribution channels, enormous financial assets, and more. Wadhwa and Amla go deeply into why the pace and dynamics of innovation have changed so dramatically in recent years and show how companies can overcome obstacles like the Eight Deadly Sins of Stasis. Equally important, they provide a playbook on how to use their insights in your own company, team, or career. This fast-paced, anecdote-rich story rethinks modern innovation—a book every manager, executive, and ambitious employee will want to read.

Globalization, Competitiveness, and Governability Ricardo Ernst, Jerry Haar, 2019-05-28 This book argues that three powerful symbiotic forces (globalization, competitiveness, and governability) are disrupting business in the 21st century, resulting in an impact on the economic and business environment far greater than the effects of any of these three individually. Both globalization and competitiveness are governed essentially by market forces that force the introduction of significant changes aimed at increasing efficiency so that a better use may be made of the advantages of globalization (i.e., the traditional “invisible” hand). Responsibility for bringing about these changes lies not only with the private sector but also with the government (i.e., the “visible” hand). Readers will find in this book an explanation of how globalization, competitiveness, and governability define the context of global business.

What sets this work apart is its practical framework for decision-makers, helping them evaluate whether their specific technical challenges require AI, ML, or a combination of both. The book supports its analysis with academic research and industry case studies, providing quantitative metrics on performance and economic impact. The content progresses logically from theoretical foundations to practical implementation strategies, incorporating decision trees and evaluation matrices for technology selection. Written in an accessible yet technical style, it serves both as an educational resource and a decision-making guide for technology managers and business strategists. The book maintains objectivity throughout, addressing key debates about AI safety and ML bias while avoiding speculative predictions about future capabilities, making it particularly valuable for professionals involved in digital transformation initiatives.
