A Board Game Education Jeffrey P. Hinebaugh, 2009-07-16 A Board Game Education is an entertaining and valuable resource for parents, teachers, educators, and anyone who appreciates the fun and entertainment provided by classic, traditional board games. The book provides an informative analysis of how classic board games that everyone has played and probably owns are not only great family entertainment but also develop core educational skills that have been proven to lead to academic achievement. Through A Board Game Education readers learn a bit of the fascinating history trivia and little-known facts regarding the most loved board games of all time (i.e., how Monopoly was used by WWII POWs to escape). At the same time, Hinebaugh identifies the distinct educational skills developed by each of these games and explores in detail how the play of these games cultivates such skills. A Board Game Education also provides valuable suggestions about how to modify and vary these classic board games to specifically enhance additional core educational skills and concepts. Who would have thought that Candy Land could be modified into a strategy game and Chutes and Ladders could be used to teach algebraic equations and advanced math.

Knack Chess for Everyone Al Lawrence, Lev Alburt, 2010-04-13 Chess is a refreshing pastime for most players, and an all-encompassing obsession for a few. And yet much of chess literature—heavy on notation, low on useful illustrations, frustrating for the beginner—is directed at those already in the know. Knack Chess for Everyone provides an alternative: a clear, understandable, and fun entry into chess that doesn't ignore the complexities and challenges. Photographs of actual game boards, often paired with a diagram, represent the perspective of the player looking at the pieces. The book clearly explains the rules of play and movement of pieces, and then gradually introduces various tactics and strategies.

Playing to Win Hilary Levey Friedman, 2013-08-03 Many parents work more hours outside of the home and their lives are crowded with more obligations than ever before; many children spend their evenings and weekends trying out for all-star teams, traveling to regional and national tournaments, and eating dinner in the car while being shuttled between activities. In this vivid ethnography, based on almost 200 interviews with parents, children, coaches and teachers, Hilary Levey probes the increase in children's participation in activities outside of the home, structured and monitored by their parents, when family time is so scarce. As the parental second shift continues to grow, alongside it a second shift for children has emerged--especially among the middle- and upper-middle classes--which is suffused with competition rather than mere participation. What motivates these particular parents to get their children involved in competitive activities? Parents' primary concern is their children's access to high quality educational credentials--the biggest bottleneck standing in the way of, or facilitating entry into, membership in the upper-middle class. Competitive activities, like sports and the arts, are seen as the essential proving ground that will clear their children's paths to the Ivy League or other similar institutions by helping them to develop a competitive habitus. This belief, motivated both by reality and by perception, and shaped by gender and class, affects how

parents envision their children's futures; it also shapes the structure of children's daily lives, what the children themselves think about their lives, and the competitive landscapes of the activities themselves--

The Deep Learning Revolution Terrence J. Sejnowski, 2018-10-23 How deep learning—from Google Translate to driverless cars to personal cognitive assistants—is changing our lives and transforming every sector of the economy. The deep learning revolution has brought us driverless cars, the greatly improved Google Translate, fluent conversations with Siri and Alexa, and enormous profits from automated trading on the New York Stock Exchange. Deep learning networks can play poker better than professional poker players and defeat a world champion at Go. In this book, Terry Sejnowski explains how deep learning went from being an arcane academic field to a disruptive technology in the information economy. Sejnowski played an important role in the founding of deep learning, as one of a small group of researchers in the 1980s who challenged the prevailing logic-and-symbol based version of AI. The new version of AI Sejnowski and others developed, which became deep learning, is fueled instead by data. Deep networks learn from data in the same way that babies experience the world, starting with fresh eyes and gradually acquiring the skills needed to navigate novel environments. Learning algorithms extract information from raw data; information can be used to create knowledge; knowledge underlies understanding; understanding leads to wisdom. Someday a driverless car will know the road better than you do and drive with more skill; a deep learning network will diagnose your illness; a personal cognitive assistant will augment your puny human brain. It took nature many millions of years to evolve human intelligence; AI is on a trajectory measured in decades. Sejnowski prepares us for a deep learning future.
