Joni Adamson, William A. Gleason, David Pellow

Biomimicry Janine M. Benyus, 2009-08-11 Repackaged with a new afterword, this valuable and entertaining (New York Times Book Review) book explores how scientists are adapting nature's best ideas to solve tough 21st century problems. Biomimicry is rapidly transforming life on earth. Biomimics study nature's most successful ideas over the past 3.5 million years, and adapt them for human use. The results are revolutionizing how materials are invented and how we compute, heal ourselves, repair the environment, and feed the world. Janine Benyus takes readers into the lab and in the field with maverick thinkers as they: discover miracle drugs by watching what chimps eat when they're sick; learn how to create by watching spiders weave fibers; harness energy by examining how a leaf converts sunlight into fuel in trillionths of a second; and many more examples. Composed of stories of vision and invention, personalities and pipe dreams, Biomimicry is must reading for anyone interested in the shape of our future.

Biomimicry Janine M. Benyus, 2002 Introduces some of the men and women who are working in the field of biomimicry--a science that studies nature's models and then imitates them to solve human problems--and considers the implications of such studies for the future of mankind.

Design & Nature V Angelo Carpi, C. A. Brebbia, 2010 With the onward march of science and technology, and the continuing quest for improvement, there is a growing curiosity about the world around us. Close examination of structures in nature can be rewarding and surprising Nature has shown an extraordinary capacity to develop dynamic structures and systems over many millions of years and there is still much to be learnt. Aimed at providing researchers in this subject with

fresh impetus and inspiration, this book consists of papers presented at the Fifth International Conference on Design and Nature. The contributions reflect the rich variety of work currently taking place around the world and cover the following topics: Nature and Architecture; Mechanics in Nature; Natural Materials and Processing; Solutions from Nature; Biomimetics; Biomimetics and Bioinspiration; Biocapacity; Education in Design and Nature, and Helical Design in Nature.

The Architecture Annual 2007-2008. Delft University of Technology Luisa Calabrese, 2009 The theme of this Architecture Annual is Realize ... in just one year the Faculty of Architecture and its staff, in collaboration with internal and external designers, were able to realize quite a lot: an efficient and successful relocation to a temporary tent camp and a completely new faculty on Julianalaan. - preface.

Partnering with Nature Catriona MacGregor, 2010-04-13 Partnering with Nature is a simple book with a powerful message: our connections to the natural environment— and ultimately, to ourselves—are crucial in today's fragmented world. As each successive generation moves farther away from nature, the growing disconnect is expressed through physical as well as mental stress, from depression and fatigue in adults to attention disorders and obesity in children. The way we relate to nature helps define our place within it, and by awakening this natural, yet dormant connection to the environment around us, we can move beyond solitary stewardship and into partnership. In Partnering with Nature, Catriona MacGregor weaves together scientific and historical wisdom, spiritual insights, and inspiring stories that illuminate the energies that link humans, animals, and the natural world. Through observation and conscious practice, we can open up to the power of nature to transform our lives, uplift our spirits, and even to direct our bodies to a healthier potential. For everyone who has a sense of something missing, who wishes to make a difference in their world, who yearns to reclaim their sense of wonder and awe, or who struggles with their health or emotional balance—nature speaks to all who will listen.

Biomimicry for Materials, Design and Habitats Marjan Eggermont, Vikram Shyam, Aloysius F. Hepp, 2022-02-21 Biomimicry for Materials, Design and Habitats: Innovations and Applications and is a survey of the recent work of recognized experts in a variety of fields who employ biomimicry and related paradigms to solve key problems of interest within design, science, technology, and society. Topics covered include innovations from biomimicry in materials, product design, architecture, and biological sciences. The book is a useful resource for educators, designers, researchers, engineers, and materials scientists, taking them from the theory behind biomimicry to real world applications. Living systems have evolved innovative solutions to challenges that humans face on a daily basis. Nonlinear multifunctional systems that have a symbiotic relationship with their environment are the domain of nature. Morphological solutions for buildings inspired by nature can be used for skins, surfaces, and structures to facilitate environmental adaptation of buildings to increase occupant comfort and reduce energy demands. Birds can teach us to produce novel structures, 3D printing can be informed by oysters and mussels, and mycelium may show us the way to fabricate new biocomposites in architecture. Therefore, it is in nature that we seek

inspiration for the solutions to tomorrow's challenges. - Presents new directions in education and the various applications of biomimicry within industry, including bio-inspired entrepreneurship - Discusses the role of biomimicry in education, innovation, and product design - Covers applications in systems engineering and design, novel materials with applications in 3D printing, and bio-inspired architecture - Includes perspectives on sustainability detailing the role that bio-inspiration or biomimicry plays in sustainability

Marketing of High-technology Products and Innovations Jakki J. Mohr, Sanjit Sengupta, Stanley F. Slater, 2010 This title provides a thorough overview of the issues high-tech marketers must address, and provides a balance between conceptual discussions and examples; small and big business; products and services; and consumer and business-to-business marketing contexts.

Keywords for Environmental Studies Joni Adamson, William A. Gleason, David Pellow, 2016-02-26 Introduces key terms, quantitative and qualitative research, debates, and histories for Environmental and Nature Studies Understandings of “nature” have expanded and changed, but the word has not lost importance at any level of discourse: it continues to hold a key place in conversations surrounding thought, ethics, and aesthetics. Nowhere is this more evident than in the interdisciplinary field of environmental studies. *Keywords for Environmental Studies* analyzes the central terms and debates currently structuring the most exciting research in and across environmental studies, including the environmental humanities, environmental social sciences, sustainability sciences, and the sciences of nature. Sixty essays from humanists, social scientists, and scientists, each written about a single term, reveal the broad range of quantitative and qualitative approaches critical to the state of the field today. From “ecotourism” to “ecoterrorism,” from “genome” to “species,” this accessible volume illustrates the ways in which scholars are collaborating across disciplinary boundaries to reach shared understandings of key issues—such as extreme weather events or increasing global environmental inequities—in order to facilitate the pursuit of broad collective goals and actions. This book underscores the crucial realization that every discipline has a stake in the central environmental questions of our time, and that interdisciplinary conversations not only enhance, but are requisite to environmental studies today. Business and Environmental Sustainability Sigrun M. Wagner, 2020-07-19 Environmental sustainability is increasingly important to organisations, whether for regulatory, financial or ethical reasons. *Business and Environmental Sustainability* looks at the environmental aspect of sustainability for all organisations pursuing competitive advantage. The book provides theoretical foundations from science, economics, policy and strategy, introduces three environmental challenges (climate change, pollution and waste) and looks at how corporate functions can address these. This textbook provides a thorough foundation by introducing readers to the science, reasoning and theory behind environmental sustainability and then delves into how these ideas translate into principles and business models for organisations to use. Next, it covers environmental

challenges from climate change, pollution and waste, and then goes on to examine the different corporate functions (from supply chain management to human resources) to illustrate how environmental sustainability is managed and put into practice in organisations. Finally, a set of integrative case studies draws everything together and enables the reader to apply various analytical tools, with the aim of understanding how companies can not only reduce their environmental footprint but can positively contribute to environmental sustainability. Written by an award-winning lecturer, Business and Environmental Sustainability boasts a wealth of pedagogical features, including examples from a range of industries and countries, plus a companion website with slides, quiz questions and instructor material. This will be a valuable text for students of business, management and environmental sustainability and will also be suitable for broader courses on corporate responsibility and sustainability across environmental studies, political science and engineering.

Contemporary Megaprojects Seth Schindler, Simin Fadaee, Dan Brockington, 2021-08-13 Contemporary megaprojects have evolved from the discreet, modernist projects undertaken in the past by centralized authorities to encompass everything from large-scale construction to space exploration. Contemporary Megaprojects explores how these projects have been impacted by cutting-edge technology, the private sector, and the processes of decentralization and dematerialization. With case studies ranging from mega-plantations in Southeast Asia to ocean mapping to sports events, the contributions in this collected volume demonstrate the increasing ambition and pervasiveness of these projects, as well as their significant impact on both society and the environment.

Innovation Ecosystems Michel Saloff-Coste, 2022-06-22 Our current situation, marked simultaneously by the Anthropocene, global warming, digitization and exponential artificial intelligence, leads us to sudden and total change in global civilization and, de facto, to rebuilding the foundations of the international economy. Innovation Ecosystems explores the risks and opportunities facing the contemporary world by analyzing, comparing and categorizing the world's most dynamic innovation ecosystems by region and city. This includes the identification of key characteristics – common or original – and learning from them in terms of culture, management, system and structure, in order to meet current challenges and think about civilizations of the future.

Proceedings of the 10th Focus Conference (TFC 2023) Manyane Makua, Mariam Akinlolu, Mashango Sithole, Phiwayinkosi Gumede, Cebo Nyondo, Ntombikhona Khuzwayo, Mandlenkosi Mhlongo, 2023-11-03 This is an open access book. The 2023 Focus Conference will focus on Goal Four (Quality Education) of the United Nations (UN) Sustainable Development Goals (SDG). Goal Four is seized with providing “equal access for all women and men to affordable and quality technical, vocational and tertiary education including university.” Quality education, in this context, means the ability to function, provide and derive value in society. The theme of the conference is therefore coined as “The Role of Higher Education in the Attainment of Sustainable Quality Education.” Through this theme, the conference will provide a space for

participants to share practical knowledge, experiences, and possible solutions to the myriad of problems that confront the higher education sector. Universities are often thought of as ivory towers far removed from the realities that confront global societies. To compound this, higher education is increasingly being questioned for its relevance in providing practical and innovative solutions to existing societal problems. Such questions often navigate around the relevance of the academic programmes being offered, curriculum, the capacity of staff, employability of graduates, and generally the ability of these institutions to understand why they exist. Indeed, higher education's role in creating a sustainable future will presumably take on greater importance as the world continues to become increasingly globalised and interdependent.

NanoInnovation Michael Tomczyk, 2014-08-25 NanoInnovation: What Every Manager Needs to Know is the most comprehensive book written to-date on innovative technologies and applications in the field of nanotechnology. Author Michael Tomczyk conducted more than 150 interviews with nano-insiders to present the inside story of scientific discoveries, research breakthroughs, and commercial products and applications that are already changing our lives, thanks to the remarkable ability to manipulate atoms and molecules at the nanoscale.

Design and Science Leslie Atzmon, 2023-01-12 Design and Science addresses the inter-relationship, in both historical and contemporary contexts, between design thinking and design processes and scientific and medical research methods. Contributors address the parallels between research methodologies in design and the sciences, both of which involve the recognition of an issue, conceptualisation of ways to resolve it, and then the modelling and implementation of a viable solution. Much research across various scientific disciplines follows a similar pattern. Thematic sections explore visualisation, visual narrative and visual metaphor; biodesign and biomimicry; makers and users in design and science, and data visualisation, discussing the role of data from nature as an ultimate source of design.

Sustainable Design for the Built Environment Rob Fleming, Saglinda H Roberts, 2019-01-18 Sustainable Design for the Built Environment marks the transition of sustainable design from a specialty service to the mainstream approach for creating a healthy and resilient built environment. This groundbreaking and transformative approach introduces sustainable design in a clear, concise, easy-to-read format. This book takes the reader deep into the foundations of sustainable design, and creates a holistic and integrative approach addressing the social, cultural, ecological, and aesthetic aspects in addition to the typical performance-driven goals. The first section of the book is themed around the origins, principles, and frameworks of sustainable design aimed at inspiring a deeper, broader, and more inclusive view of sustainability. The second section examines strategies such as biophilia and biomimicry, adaptation and resilience, health and well-being. The third section examines the application of sustainability principles from the global, urban, district, building, and human scale, illustrating how a systems thinking approach allows sustainable design to span the context of time, space, and varied perspectives. This textbook is intended to inspire a new vision for the future that unites human activity with natural processes to form a

regenerative, coevolutionary model for sustainable design. By allowing the reader an insightful look into the history, motivations, and values of sustainable design, they begin to see sustainable design, not only as a way to deliver green buildings, but as a comprehensive and transformative meta-framework that is so needed in every sector of society. Supported by online resources including additional reading for each chapter and classroom assignments, this book will be essential reading for students of sustainability and sustainable design.

Mad Like Tesla Tyler Hamilton, 2011-09-01 An “illuminating and important” look at the scientists, engineers, and entrepreneurs who are working to save us from catastrophic climate change (New York Journal of Books). Nikola Tesla was considered a mad scientist by the society of his time for predicting global warming more than a hundred years ago. Today, we need visionaries like him to find sources of alternative energy and solutions to this looming threat. *Mad Like Tesla* takes an in-depth look at climate issues, introducing thinkers and inventors such as Louis Michaud, a retired refinery engineer who claims we can harness the energy of man-made tornadoes, and a professor and a businessman who are running a company that genetically modifies algae so it can secrete ethanol naturally. These individuals and their unorthodox methods are profiled through first-person interviews, exploring the social, economic, financial, and personal obstacles that they continue to face. Also covered is the existing state of green energy technologies—such as solar, wind, biofuels, smart grid, and energy storage—offering a ray of hope against a backdrop of dread. “Hamilton makes complex technologies comprehensible.”

Tree Architecture Jacob Smith, 2025-02-19 *Tree Architecture* explores the intersection of trees and architectural design, revealing how nature's forms inspire sustainable and innovative building practices. It examines how architectural designs mimic tree structures for enhanced stability using biomimicry, such as emulating branching patterns to distribute weight efficiently. The book also highlights the ecological role of trees in urban settings, emphasizing their ability to improve air quality and mitigate the urban heat island effect. The book is divided into three central themes, moving from direct inspiration to sustainable materials and ecological roles. It assesses the use of wood and engineered wood products, detailing their benefits and limitations concerning climate change. Case studies and examples illustrate the practical application of integrating trees into architectural projects, offering a vision for nature-integrated design. What makes this book unique is its comprehensive approach, bridging architectural theory with ecological practice. Using an accessible yet informed tone, *Tree Architecture* highlights the importance of understanding both architectural principles and ecological concepts to foster sustainable building solutions.

Design Innovations for Contemporary Interiors and Civic Art Crespi, Luciano, 2016-09-08 In some post-industrial areas, re-designing structural interiors in an attractive way is becoming increasingly important to community members, as it helps promote local pride and a higher quality of life. *Design Innovations for Contemporary Interiors and Civic Art* examines

novel techniques in structural designs in various cultural and social scenarios. Featuring innovative application methods, emergent trends, and research on tools being utilized in the field, this publication is a pivotal reference source for designers, researchers, practitioners, and professionals interested in interior design, urban culture, and structural aesthetics.
