The Geotraveller Roger N. Scoon,2021-03-25 This book describes famous geosites and historical localities in national parks and conservation areas from North America, East Africa, and Europe. The geosites include iconic landforms associated with active volcanoes, canyons, glaciated landscapes, natural rock monoliths, and rifts. The potential for geotourism in historical localities such as the famous Greco-Roman antiquities of Greece, Italy, and Turkey, is emphasised. Some of the geosites and historical localities provide evidence that previous civilizations coped with active geology and major climatic cycles, whilst others reveal evidence of famous geological events recognized in history and ancient mythology that helped shape our current civilization. The book assists tour guides and visitors (both geologists and non-specialists) interested in geotourism by providing an understanding of geological processes in the national parks and historical locations with the assistance of photographs and simplified geological maps.

Quaternary Glaciations - Extent and Chronology J. Ehlers,P.L. Gibbard,2004-06-08 This book is the first of three volumes in which the recent knowledge of the extent and chronology of Quaternary glaciations has been compiled on a global scale. This information is seen as a fundamental requirement, not only for the glacial workers, but for the wider user-community of general Quaternary workers. In particular the need for accurate ice-front positions is a basic requirement for the rapidly growing field of palaeoclimate modelling. In order to provide the information for the widest-possible range of

users in the most accessible form, a series of digital maps was prepared. The glacial limits were mapped in ArcView, the Geographical Information System (GIS) used by the work group. Digital maps, showing glacial limits, end moraines, ice-dammed lakes, glacier-induced drainage diversions and the locations of key sections through which the glacial limits are defined and dated are included. For major parts of Europe also the extent of the maximum Eemian transgression has been indicated. The digital maps in this volume cover all of Europe and parts of northwestern Siberia. Both overview maps and more detailed maps are provided.

American Line Type Book, Borders, Ornaments American Type Founders Company, 1906 The American Type Founders Company (ATF) was formed out of a business necessity. Led by John Marder of the Chicago Type Foundry and Arthur Brower of the Union Type Foundry, several other type founders created a combined company of twenty-three plants scattered across the United States, which was incorporated by November 1892. According to Annenberg, this edition was prepared for the London branch. This copy of the catalog, which does not contain any kind of London imprint, includes only type metal, cuts, ornaments, and rule.

The New Larned History for Ready Reference, Reading and Research Josephus Nelson Larned, 1924

With SOE in Greece Tom Evans, 2018-04-30 Pat Evans parachuted into German-occupied Northern Greece in September 1943. His mission as a SOE operative was to support the Greek resistance movement, carry out sabotage and commando operations and gather military intelligence. By this time Greece was not only a country ravaged by a brutal occupation but being torn apart by feuding political factions on the edge of civil war. Evans had to walk a tight-rope between the Germans, the Communist directed ELAS, Macedonia irredentists and his own SOE masters in Cairo and Allied High Command. After the Nazis withdrew in late 1944, he was sent to Northern Greece to try and restore some form of normality amid the chaos of civil war. His success can be measured by the warmth in which the locals still remember him, over 70 years on. This book draws on a wide range of sources, including SOE and War Cabinet papers but it is Pat Evans unpublished letters and reports that give the reader an insight into the challenge that he faced, both operationally and politically. The result is a thrilling and informative book.

European Glacial Landscapes David Palacios, Philip D. Hughes, Jose M. Garcia-Ruiz, Nuria de Andrés, 2022-09-16 *European Glacial Landscapes: Last Deglaciation* brings together relevant experts on the history of glaciers and their impact on the

landscape of the main European regions. Soon after the Last Glacial Maximum, a rapid process of the glacial retreat began throughout Europe. This was interrupted several times by abrupt climate cooling, which caused rapid, although moderate, re-advance of the glaciers, until the beginning of the Holocene when the climate became relatively stable and warm. These successive glacial advances and retreats during the Last Deglaciation have shaped much of the European landscape, reflecting abrupt climatic fluctuations. As our knowledge of abrupt climate changes since the Last Glacial Maximum progresses, new uncertainties arise. These are critical for understanding how climate changes disseminate through Europe, such as the lag between climate changes and the expansion or contraction of glaciers as well as the role of the large continental ice sheets on the European climate. All these contributions are included in the book, which is an invaluable resource for geographers, geologists, environmental scientists, paleoclimatologists, as well as researchers in physics and earth sciences. - Provides a synthesis that highlights the main similarities or differences, through both space and time, during the Last Deglaciation of Europe - Features research from experts in quaternary, geomorphology, palaeoclimatology, palaeoceanography and palaeoglaciology on the Last Deglaciation in Europe during Termination 1 and the important Late Pleistocene-Holocene transition - Includes detailed colour figures and maps, providing a comprehensive overview of the glacial landscapes of Europe during the last deglaciation

The Physical Geography of the Mediterranean Jamie C. Woodward, 2009-05-07 This volume explores the climates, landscapes, ecosystems and hazards that comprise the Mediterranean world. It traces the development of the Mediterranean landscape over very long timescales and examines modern processes and key environmental issues in a wide range of settings. The Mediterranean is the only region on Earth where three continents meet and this interaction has produced a very distinctive Physical Geography. This book examines the landscapes and processes at the margins of these continents and the distinctive marine environment between them. Catastrophic earthquakes, explosive volcanic eruptions and devastating storms and floods are intimately bound up within the history and mythology of the Mediterranean world. This is a key region for the study of natural hazards because it offers unrivalled access to long records of hazard occurrence and impact through documentary, archaeological and geological archives. The Mediterranean is also a biodiversity hotspot; it has been a meeting place for plants, animals and humans from three continents throughout much of its history. The Quaternary records of these interactions are more varied and better preserved than in any other part of the world. These records have provided important new insights into the tempo of climate, landscape and ecosystem change in the Mediterranean region and beyond. The region is unique because of the very early and widespread impact of humans in landscape and ecosystem change - and the richness of the archaeological and geological archives that chronicle this impact. This book examines this history and these interactions and places current environmental issues in long term context. The Rivers of Greece Nikos Skoulikidis, Elias Dimitriou, Ioannis Karaouzas, 2017-11-16 This volume provides essential information on the origin and evolution of Greek rivers, as well as their ecological and anthropogenic characteristics. The topics covered include geomorphology, biogeography, hydrology, hydrobiology, hydrogeochemistry, geological and biogeochemical processes, anthropogenic pressures and ecological impacts, water management – both in the antiquity and today – and river restoration. The book is divided into four parts, the first of which explores the importance of rivers for ancient Greek civilization and the natural processes affecting their evolution during the Holocene. In the second part, the hydrological, hydrochemical and biological features of Greek rivers and the unique biogeographical characteristics that form the basis for their high biodiversity and endemism are highlighted, while the third part comprehensively discusses the impacts of environmental pollution on the structure and function of Greek river ecosystems. In turn, the final part describes the current socio-economic factors in Greece that are affecting established water management practices, the application of ecohydrological approaches in restoring fragmented rivers, and the lessons learned from restoring aquatic ecosystems in general as a paradigm for understanding and minimizing anthropogenic impacts on water resources, at the Mediterranean scale. Given the breadth and depth of its coverage, the book offers an invaluable source of information for researchers, students and environmental managers alike.

Greece: Northern Greece Dana Facaros, 2020-01-09 This new guide to Northern Greece, written by Greece expert and long-time travel writer Dana Facaros, is the only guide available to the region and includes the areas of Epirus, Thessaly, Macedonia and Thrace, complete with their five dramatically beautiful national parks, the country's highest peaks and mountain lakes, rushing rivers and the world's deepest gorge, and (this is Greece, after all) long sandy beaches. Sections on background and practical information are followed by an easy-to-follow breakdown of the area offering detailed coverage in 12 chapters, from Greece's second city, Thessaloníki, to Chalkidiki, Central Macedonia, Eastern Macedonia, Thrace, Western Macedonia, Epirus (including Ioánnina), Thessaly and Magnesía, the Pelion Peninsula and the Islands, plus a short chapter on

Athens, the gateway for many visitors to Greece. Greece is becoming more popular by the year and this area in particular offers the more natural, authentic experience that many travellers seek. Bradt's Northern Greece focuses on just this relatively unknown but up-and-coming region and is an ideal companion for travellers of all ages, budgets and interests, from culture lovers to wildlife enthusiasts, history buffs to archaeologists, foodies to wine connoisseurs. Holidays in the great outdoors are covered, too, including mountain climbing, skiing, white water rafting, rock climbing, sailing, canyoning and sea kayaking, not to mention those who just want to sit on a sandy beach and dance the night away.

Lake Prespa, Northwestern Greece Alain J. Crivelli, George Catsadorakis, 2012-12-06 Lakes in the Balkans are numerous, but few of them have been studied, and even fewer on a long-term basis. This book is the first on a lake of the Balkans since the monograph on Lake Ohrid (1956). It is a synthesis of our present knowledge on the ecology and functioning of the lake and its resources, with an emphasis on its endemism and on the management needed to preserve its unique fauna and flora. It also contains original long-term studies on pelicans and fish. The target readership is well-educated lay people, conservationists (especially birdwatchers) and wetland scientists.

The Legacy of Serbia's Great War Alex Tomić, 2024-01-05 In the winter of 1915, following the invasion of Serbia by the Central Powers, the Serbian Army retreated across the mountains of Albania and Montenegro together with thousands of civilians. Around 240,000 lost their lives. Today, the story of the retreat is little known, except in Serbia where it represents the heroic Serbian sacrifice in the Great War. In this book Alex Tomic examines the centenary events memorializing the First World War with the retreat at its core and provides a persuasive account of the ways in which the remembrance of Serbian history has been manipulated for political purposes. Whether through commemorations, ceremonies or grass-root initiatives, she demonstrates how these have been used as distractions from the more recent unexamined past and in doing so provides an important new perspective on the cultural history of commemoration.
